being effected in 1865. Until that year the name was the Delhi Bank Corporation, but since 1865 it has been known by its present title. In addition to its head office the Bank has seven offices open in India, at Amritsar, Calcutta, Delhi, Karachi, Lucknow, Mussoorie, and Simla. During the Indian Mutiny the Bank house in Delhi was plundered, and many of the books were destroyed, but fortunately a duplicate set of books in the native character was at the residence of the Bank's treasurer. This set was kept safely all through the siege, and when Delhi was retaken by the Government troops these vernacular copies of the accounts proved of great service. The authorised capital is £500,000, in 20,000 shares of £25 each, and 13,505 shares have been subscribed and are fully paid, thus making the paid amount £337,625. It may be added that no change has occurred in the amount paid up for many years past. For some time the Bank suffered from legacies of bad business, and in 1900 it was estimated that a provision of £20,000 would be necessary to provide for various losses. The situation was boldly faced, however, and at length by 1907 the whole of the sum was provided for. Since then the Bank has been able to build up a reserve fund. At the end of 1909 the reserve fund amounted to £6,500, at the end of 1910 it rose to £7,500, and at the present time it is £23,500.

In 1870 we find the deposits were but little in excess of £500,000. In the following 20 years they doubled, reaching £1,114,566 in 1890. By 1910 they had risen to £1,476,078, while the high water mark was touched at June 30, 1913, when they reached a total of £1,855,876; the following year they dropped to £1,800,235, while the outbreak of war brought about a shrinkage in the business, and the deposits at June 30 last fell to £1,467,856. Similarly on the other side of the accounts bills discounted and loans fell from £1,586,852 at June 30, 1914, to £1,261,185 at June 30, 1915. We set out herewith the liabilities and assets of the Bank for various years from 1865.

Up to 1914 a steady growth was shown in the profits, the gross profit at June 30, 1914, amounting to £59,512, as compared with £42,622 at June 30, 1905. For the twelve months to June 30 last the gross profit fell to £52,223, and after deduction of expenses there was a net profit of £13,896, which compares with £20,071 for the year to June 30, 1914. For many years past the dividend has been maintained at the steady rate of 4 per cent. per annum. The profit record since 1905 is as follows:—

Profits of the Delhi and London Bank, Limited.

Year ended June 30	Gross Profit. £	Salaries and other Expenses. £	Net Profit. £	Dividends* Amount. £	%	Reserve, &c. £	Carried Forward. £

* Free of tax.

The proportion that the net profits for 1915 bear to the paid-up capital is 4.1 per cent., to capital and reserve combined the proportion is 3.9 per cent., while to the total working resources the proportion works out at .7 per cent.

THE charter of the Dominion Bank received the Royal assent on June 22, 1869, and provided for an authorised capital of $1,000,000, with $400,000 to be paid up. Business was not commenced until February 1871, and the first report covered the period from the start of business until April 1872, for which time a profit of $107,488 was secured, which permitted of the payment of a dividend at the rate of 8 per cent. The paid-up capital amounted to $834,544, and there was shown a reserve fund of $50,000. The deposits amounted to $1,057,150, while the loans and discounts were $2,104,033. By 1882 the paid-up capital had increased to $1,000,000, while the reserve reached a total of $500,000. The deposits reached a total of $4,753,306, while the loans and discounts amounted to $5,416,179. A further increase in the paid-up capital then took place, and in 1884 it reached $1,500,000, at which figure it remained until 1901, when it was decided to increase it to $2,500,000. In 1903 it rose to $3,000,000. By the end of 1912 the paid-up capital had risen to $5,000,000. But in order to meet the general expansion in business, in February 1913 a further $1,000,000 was issued at a premium of $100, bringing the paid-up capital to $6,000,000. There consequently remains unissued $4,000,000. Following out a conservative financial policy, the reserve fund has been steadily increased, and at the end of 1914 was brought up to $7,000,000.

The notes in circulation at the end of 1914 amounted to $4,143,040, as compared with $4,630,890 at the end of 1913. The deposits also fell from $59,877,280 to $58,299,300. On the other hand, the balances due to other banks in Canada rose from $1,323,682 to $3,955,208. On the other side, the total cash fell from $14,356,751 to $13,699,441, and the investments from $6,237,532 to $5,800,313, but call and short loans rose from $4,899,463 to $6,168,323. Current loans, &c., dropped from $48,946,445 to $47,608,673. Herewith we set out a statement of the liabilities and assets for various years from 1900.

We have already pointed out that for the first period of the Bank's working a dividend at the rate of 8 per cent. was paid. This rate has been gradually increased, until in 1912 it was increased to 14 per cent., at which figure it has since been maintained.

The profit for 1914 amounted to $925,365, as compared with $950,403 for 1913. Herewith we set out the profit and dividends, &c., for each year since 1904:—

Profits of the Dominion Bank.

Year ended Dec. 31	Profit.	Dividends. Amount.	Dividends. % of Total.	Balance.	Premium on New Stock.	Reserve, Invest., Deprn., &c.	Carried Forward.
	$	$	%	$	$	$	$

1910 ...	659,301	480,000	12	179,301	—	170,000	305,068
1909 ...	620,927	478,156	12	142,771	18,268	168,268	295,767
1908 ...	641,318	473,463	12	167,855	148,275	248,275	302,996
1907 ...	635,235	428,893	12	206,342	933,457	933,457	235,140
1906 ...	539,360	360,000	12	179,360	—	400,000	28,798
1905 ...	490,495	300,000	10	190,495	—	75,630	249,438
1904 ...	459,670	300,000	10	159,670	—	500,000	134,573

The proportion that the shown net profits bear to the paid-up capital is 15.4 per cent., to capital and reserve combined 7.1 per cent., and to the total working resources 1.1 per cent.

At the meeting in January last Sir Edward B. Osler, M.P., President, pointed out that "while the War is blamed for much of the depression in trade, it cannot rightly be said to be wholly responsible; anything we may have suffered from this cause has to a large extent been offset by the higher prices we have obtained for our products and the extensive orders which have been placed in Canada for war material. The country had gone mad over speculation in real estate, which nothing apparently could stop; everywhere people were dividing farmlands into town lots, more especially in the West, selling, in some instances, a half-acre lot at the price of a good farm in Ontario, usually receiving only a small payment down and leaving an obligation on the purchaser to pay the balance, which in most cases he has been unable to do. This has been the cause of great distress in Canada, and I think that we should not try to attribute our hard times entirely to the European situation. I do not believe there will be any immediate return of prosperity, but there is no doubt that from year to year there will be a steady improvement. No one questions the future of Canada and the progress it is bound to make. We must bear in mind, however, that most of the great undertakings of late years are now nearing completion, and the expenditure of vast sums of money in this connection will consequently cease."

EASTERN BANK, LIMITED.

Head Office: 4 Crosby Square, London, E.C.

Capital—

Authorised, 100,000 Shares of £10 each £1,500,000
Paid up, £4 per Share... 600,000
Price of Share, £3⅞. *Div.*, 5 %. *Yield*, £5 6*s.* %.

THIS Bank is one of the most recently founded banking institutions of the world, dating back only to December 1909. It was founded under the auspices of Messrs. E. D. Sassoon and Co., and the whole of the capital of £1,000,000, divided into 100,000 shares of £10 each, was offered for subscription on December 31, 1909. The prospectus pointed out that it was only proposed to call up £5 per share, the remaining £5 being payable in the event of the Company going into liquidation. In view of the great expansion of Indian and Eastern trade generally the Bank was established for the purpose of transacting both exchange and local banking. In addition to undertaking the usual banking business, shipments to and from India and the East are financed, and a further large scope for the profitable employment of money is found in making advances to natives and Europeans against merchandise and other securities. As at certain seasons of the year the rates of interest that can be earned in India are very high, while in London money can be obtained at much lower rates, since no advance would be made except on good security, even at high rates of interest, handsome profits can be made in this way, both on the capital of the Bank and upon additional funds obtainable at low rates of interest.

At the end of the first twelve months the deposits reached a total of £1,166,190, and such progress was made that in a further two years the deposits nearly doubled, inasmuch as at December 31, 1912, they amounted to £2,155,212. But by reason of the financial stringency in India towards the end of 1913 the deposits in December 1913 receded to £1,675,267. The effect of the stringency was seen in the failure of several banking institutions under Indian management. The Eastern Bank escaped injury, though necessarily a much larger proportion of its liabilities was held in actual cash, and its profit-earning capacity was temporarily reduced. The reduction in deposits occurred in Bombay, the condition of affairs remaining practically normal in Calcutta. The failure of the Indian-managed banks—institutions which have not attained to the high standard of efficiency of management in institutions under the control of Britishers—may cause the people of India to turn to British banks to deposit their funds, and thus may prove a benefit to the latter class of institutions.

The year 1914 passed without noticeable incident until the outbreak of war. As the Bank is engaged in an oversea business it experienced a very anxious time, produce, upon which money had been advanced, being shipped in German and Austrian steamers, some of which were captured by the British Government, while others were forced to take refuge in neutral ports, making it very difficult to obtain delivery of the cargo. The Indian exchanges were seriously affected, but the policy of the Government of India in building up a Gold Standard Reserve enabled them to support the value of the rupee. The trade of India from August to December was naturally much restricted, and the Bank's business during the second half of the year suffered accordingly, and, as the Chairman pointed out in March last, "with a moratorium existing in this country, and not in India, we thought it necessary, as a matter of precaution, to keep our resources very liquid, and a large sum sufficient to meet all possible calls was lying idle in India for several months at a heavy cost to the Bank. At the outbreak of war the Presidency Banks' rates of discount were 3 per cent., but these rose to 6 per cent. by November. Stocks of Manchester piece-

goods in Bombay and Calcutta were abnormally large, while, owing to the lack of tonnage and the closing of many of the Continental markets, exports fell away very heavily. By the close of the year, however, both imports and exports had greatly improved, and, though business is still limited, there is no doubt that conditions in India are more normal, and there is every hope of increased operations in that quarter before very long. The monsoon and winter rains have proved all that could be wished for, and with the high prices at present ruling in Europe for all kinds of grain, the ryot should, we think, experience a period of prosperity, in which we hope the Bank may participate. There is every prospect of a record wheat crop, and it is estimated that there will be available for export between May and December three to six million tons."

We set out herewith a comparison of the liabilities and assets for each year since the formation of the institution.

For 1914 the gross profit amounted to £80,278, as compared with £79,808 for 1913. After providing for expenses there was a net profit of £36,971. The dividend was reduced from 6 per cent. to 5 per cent., and the carry-forward reduced from £8,153 to £6,477.

The manner of distributing the profits may be seen from the following:—

Profits of the Eastern Bank, Ltd., for the Past Five Years.

Year ended Dec. 31—	1914 £	1913 £	1912 £	1911 £	1910 £
Gross profit	80,278	79,808	70,382	55,543	23,278
Salaries and other expenses	43,307	40,654	36,556	31,546	18,516
Net profit	36,971	39,154	33,826	23,997	4,762
Dividend	20,000 (5%)	24,000 (6%)	20,000 (5%)	16,000 (4%)	— —
Reserve, &c.	18,647	15,000	15,000	—	3,586
Carried forward	6,477	8,153	7,999	9,173	1,176

The proportion that the shown net profit bears to the paid up capital is 6.2 per cent., to capital and reserve combined 5.6 per cent., and to the total working resources 1.3 per cent.

In June 1914 the directors decided to issue new capital, and shareholders were offered one new share for every two shares then registered in their names at a premium of 15*s.* per share. The result is that the subscribed capital has been increased by £500,000 to £1,500,000 and the paid-up capital from £400,000 to £600,000, while £25,000 has been added to the reserve fund.

THIS is a reconstruction of the English, Scottish and Australian Chartered Bank, the reconstruction scheme having been sanctioned in the English Courts in July 1896, the Bank being registered in August 1893. The authorised and subscribed capital is £1,078,875, the paid-up capital being £539,437 10*s.* The shares are of £25 each, and £12 10*s.* per share has been paid up, so that there is an uncalled capital equal in amount to that paid up. By the terms of the reconstruction scheme there are in issue three perpetual stocks, a Four per Cent. Perpetual Debenture stock of £983,547, outstanding on June 30, 1914, Preferred Inscribed Deposit stock amounting on June 30, 1914, to £889,419, and £702,600 of Deferred Inscribed Deposit stock. The Preferred stock ranks after the Debenture stock, and bears cumulative interest at 3 per cent., after which the Deferred stock ranks for non-cumulative interest at 3 per cent. Of the remaining balance £15,000 is placed to a reserve fund, and any surplus goes as additional interest on the Deferred stock up to a maximum of 4½ per cent. Before paying any dividend to the shareholders one-fourth of the amount available for that purpose is to be applied to the purchase of the Deferred stock which is thus being gradually redeemed.

In a circular issued in 1893 an interesting statement is made showing the effect of the crisis which necessitated reconstruction. It is pointed out that 15 banking institutions in all had closed their doors with liabilities to their depositors "which have been variously estimated at from £80,000,000 to £85,000,000 sterling. But to this figure must be added the liabilities of the various land companies, building societies, mortgage banks, &c., which collapsed during the years 1891 and 1892, and it will be well within the mark to say that if the creditors of all these institutions were to insist upon payment, there would be some £100,000,000 of assets to be realised, in a community which, however rich in the possession of large territory and prospective wealth, was shown by the latest returns to number considerably less than 4,000,000." In the opinion of the directors there was little likelihood of money being placed on deposit with Australian banks in the future as had occurred during the past, especially on the old terms, as the system on which Australian banks had hitherto been conducted was the receipt of large sums of money from the public at short dates of payment, when from the very nature of Australian business it was impossible to lend that money on securities of a liquid character; and although it has proved to be the case that conducting business on the old system has been impossible, nevertheless since the reconstruction the Bank has had such a prosperous career that the deposits have at length exceeded the amount reached before the crisis. In 1890 the deposits amounted to £5,861,427, but in June 1894 they were only £950,764. By 1900 they had increased to £2,309,329, while in the following ten years they doubled in amount, reaching £4,687,119 in June 1910. At June 30, 1914, they amounted to £6,875,928.

A further increase occurred during 1915, and at June 30 deposits reached a total of £7,058,797. In September 1892 with a paid-up capital of £900,000, a

* March 31. † Dec. 31.

reserve fund of £310,000 had been accumulated. By reason of the reconstruction the reserve fund was wiped out, but by 1898 another start was made, and in 1900 the reserve amounted to £90,391. The subsequent additions brought the reserve up to £365,000 at June 30 last. Herewith we set out a summary of the liabilities and assets for various years since 1860.

The twelve months to June 30, 1914, were the most prosperous yet recorded by the Bank, and the gross profit amounted to £285,861, as compared with £269,155 for the previous year. Accompanying this increase of £17,700 in profits the expenses only rose £4,000, so that the net profit amounted to £123,036, as compared with £110,194. For the past twelve months the gross profit was £280,998, and the net profit £100,185. For the fourth year in succession the dividend is 8 per cent.

The proportion that the shown net profit for 1915

Speaking in October 1914 the Chairman said that if the European war had to take place it could not have come, from the Australian point of view, at a more favourable time. Had it broken out a few months later the shipping season would have been in full swing and all the banks would have held a very much larger number of foreign acceptances representing the shipment of wool and other Australian produce to the Continent, and the dislocation of business would have been much more serious than it was. "Moreover the War finds Australia in an excellent position in all material respects to face the economic problems arising out of it. A succession of good seasons, and the consequent increase in the deposits held by the various banks have placed the Commonwealth in a strong financial position—a stronger one than it has been in for some time past.

HONGKONG AND SHANGHAI BANKING CORPORATION.

There is a reserve liability of $125 per share.

This very influential Eastern banking institution was incorporated by Ordinance of the Legislative Council of Hong Kong in July 1867, but it was some two years previously that the first steps were taken to establish the Bank. Its formation was largely due to the spirit of enterprise marking the period, which resulted in the formation of many local banking institutions in India, and a group of merchants in Hong Kong considered that the time was ripe for the establishment of a bank in that city. Accordingly steps were taken to found the Bank, which was brought into being with a capital of $5,000,000. Only half of this amount was at first paid up. The head office was fixed at Hong Kong, while a branch was opened at Shanghai. In addition it was decided to establish agencies at Foochow, Ningpo (subsequently closed), Singapore, Manila, Calcutta, Bombay, Bangkok, and London. The base of operations has since been extended to other countries, so that at the present time the Bank is represented not only in China and India, as well as in England, but there are offices in Japan, the United States, France, and Germany; and in addition to the places already mentioned there are offices at Amoy, Batavia, Canton, Colombo, Hamburg, Hankow, Hongkew, Ipoh, Johore, Kobe, Kuala Lumpur, Lyons, Malacca, Nagasaki, New York, Pekin, Penang, Rangoon, Saigon, San Francisco, Sourabaya, Tientsin, Tsingtau, Yloilo, and Yokohama. By 1870 the paid-up capital amounted to $3,500,000, and during the seventies the full amount of $5,000,000 was paid up. In 1883 the steady expansion of the business necessitated the raising of the capital to $7,500,000. Progress continued to be made, and in 1890 a further enlargement of the capital was called for, and, accordingly, 20,000 new shares were issued, bringing the paid-up capital up to $10,000,000. It was maintained at this figure until 1907. During this period a great expansion of Eastern trade occurred, and the business of the Bank kept pace with it. Not only so, but the directors had in view the probable further expansion that would occur, especially in China. In order to be ready to meet any such increase in business it was decided to create 40,000 new shares of $125 each, which were issued to existing shareholders in the proportion of one new share to two old. The issued capital was accordingly brought up to $15,000,000, at which figure it still stands.

One of the most noteworthy features of the accounts of the institution is the large amount of the reserve funds. With a paid-up capital, as stated, of $15,000,000 at December 31 last the reserves reached

Liabilities of The Hongkong and Shanghai Banking Corporation.

* Included in Current Accounts, &c. † December 31.

a total of no less than $33,000,000, of which $15,000,000, a sum equal to the paid-up capital, is styled a sterling reserve fund, being held in London at the exchange of 2*s.* per dollar (that is, £1,500,000 sterling), and invested in Consols and other sterling securities, these at December 31 last being as follows:—

1,200,000 2½% Consols at 68⅛, of which £250,000 is lodged with the Bank of England as a special London reserve	£822,000
30,000 3% Exchequer Bonds	306,900
496,500 other sterling securities written down	371,100
	£1,500,000

while the balance of $18,000,000 is a silver reserve fund. It may be remarked in passing that in the earlier years the Bank paid its dividend in dollars; but subsequently it was considered inadvisable to pay in a fluctuating currency, and the $125 shares were assumed to have a sterling nominal value of £28 2*s.* 6*d.*, equal to 4*s.* 6*d.* per dollar, and dividends were paid in sterling on that basis; but as the dollar has now shrunk to a value of less than 2*s.*, the $125 nominal value of the shares is only worth £12 10*s.*, upon which the last dividends at the rate of £4 11*s.* per share represent a distribution of 40.05 per cent. But by building up so large a silver reserve fund the depreciation that has occurred in the value of the dollar has been provided for. By reference to the tables given herewith the enormous growth made by the Corporation may readily be seen. Up to the eighties the Bank had no note issue, but power was subsequently secured, and the Bank is authorised to issue notes for the amount of its paid-up capital against coin or securities equal to 55½ per cent. of the paid-up capital. Notes issued in excess must be covered by coin and/or bullion deposited with the Hong Kong Government for the full amount of the excess.

At December 31 last the notes in circulation amounted to $27,247,823. The growth in the deposits affords the best example of the continuous expansion shown by the Bank. By 1880 the deposits were $22,915,681, but in the following 10 years they rose to no less than $93,351,200. By 1900 they reached $158,967,176. In 1910 they touched $290,926,486. At the end of 1913 they were $298,440,661, while by December 31 last they touched the very large figure of $329,562,276. The growth may be seen from the tables herewith.

Since 1904 the rate of dividend paid by the Bank has risen from £3 10*s.* per share to £4 11*s.* per share for the twelve months to December 31 last. In consequence of the conversion at the rate of exchange the actual percentage return has varied between a minimum of 31.52 per cent. and a maximum of 40.05 per cent. The net profit for 1914 amounted to $7,298,711, as compared with $6,288,606. Of the net profit the dividend absorbed $6,008,747. After making provision for reserves, &c., the carry-forward was increased from $2,067,312 to $2,607,275. Herewith we set out the profit record since 1904:—

Profits of the Hongkong and Shanghai Banking Corporation.

Year ended June 30	Net Profit. $	Dividends. Rate. £ per Share=%	Dividends. Amount. $	Reserve Invest., Deprn., &c. $	Carried Forward. $

capital. If the reserve funds are added the proportion is reduced to 15.2 per cent. If the total working resources of the Bank are taken into account the net profit works out at a proportion of 1.3 per cent.

In addition to the very important position occupied by the Bank in the Far East in the mercantile and commercial world generally, the Hongkong and Shanghai Banking Corporation has built up for itself a prestige of such a character that it has secured a class of business of a very exceptional nature. By reason of the very great confidence enjoyed by the institution it was selected by the Chinese Imperial Government for the flotation of loans on behalf of China, and since the formation of the Republic it has carried out similar operations, and has, indeed, become the recognised agent for effecting Chinese loans in Europe. Not only so, but it has undertaken similar work on behalf of the Japanese Government. Altogether the Corporation has been responsible, either entirely or in conjunction with other houses, for the flotation of Eastern loans to an amount closely approximating £175,000,000.

Now that China is seeking to introduce a modern system of government and a more enlightened economic policy its progress is likely to be much faster than hitherto, and there are few institutions in the world with such opportunities for increased usefulness as this Bank seems to possess.

IMPERIAL BANK OF CANADA.

The Imperial Bank of Canada has completed 40 years of existence, having been formed in 1875. The first report that was issued, dated June 22, 1876, showed that the Bank had a paid-up capital of $804,884, and that a sum of $25,000 had been set aside for the purpose of starting a reserve. The notes in circulation were $310,902, while the total deposits amounted to $1,594,199. Against this the Bank had total cash of $244,123, made up of $60,889 of gold and silver coin, $131,139 of Government demand notes, and $52,095 of notes and cheques of other banks. In addition the Bank had call and short loans amounting to $464,965, while current loans and discounts amounted to $2,205,814. By 1890 the paid-up capital amounted to $1,500,000 and the reserve fund was $700,000. In a further 15 years the paid-up capital was doubled, amounting to $3,000,000. The Bank had also accumulated a reserve fund of a similar amount, and from that date until April 1912 the reserve fund was maintained at a figure equal to that of the paid-up capital, and as increases have been made in the latter figure, corresponding additions have been made to the reserve fund; but with the amount placed to its credit by April 30, 1913, the reserve totalled $7,000,000, as against a paid-up capital of $6,788,169, so that the Bank had a reserve in excess of the paid-up capital. In June 1912 there was made a further issue of $1,000,000 of new capital, which became fully paid during 1914, and at April 30 of that year the paid-up capital amounted to $7,000,000, at which figure it still stands. The reserve fund is equal in amount, no additions having been made since 1913. The note circulation at April 30 last amounted to $4,528,252, as compared with $4,762,347. The deposits fell from $58,238,854 to $55,081,904. This reduction, however, is perhaps more apparent than real owing to the fact that a year ago the figures were somewhat abnormal on account of certain special Government deposits which have in the ordinary course of business been withdrawn for the purpose originally intended. Balances due to other banks have risen from $210,656 to $686,425. On the other side of the accounts the cash has risen from $16,008,510 to $17,434,099. The call loans and investments are both rather higher, but sums due by other banks have dropped from $7,863,799 to $4,234,758, while loans, &c., have dropped from $46,000,169 to $44,716,032. Herewith we set out a statement of the liabilities and assets for various years since the formation of the Bank

When war broke out it was thought advisable to further increase the Bank's holding of cash in order to be ready for any possible emergency, and this has had its effect naturally on the profits of the year, which have fallen from $1,236,985 to $1,008,570. The dividend is maintained at 12 per cent, as may be seen

The proportion that the profit for the year to April 30, 1915, bears to the paid-up capital is 14.4 per cent., to capital and rest combined 7.2 per cent., and to the working resources, amounting to $75,568,247, the proportion works out at 1.3 per cent.

IMPERIAL BANK OF PERSIA.

Head Office: 25 Abchurch Lane, London, E.C.

Capital—

Authorised £650,000

Issued, 99,800 Ordinary, 200 Founders' Shares of £6 10*s.*, fully paid 650,000

Price of Ord., £5. *Dividend*, 6⅛%*. *Yield*, £9 3*s.* 10*d.*

NOTE.—The charter provides that the capital may be increased to £4,000,000.

* Free of tax.

THE Imperial Bank of Persia was incorporated by Royal charter in September 1889, granted by the English Government for the purpose of carrying on banking operations under an exclusive concession granted by the Government of the Shah of Persia to Baron Julius de Reuter for the term of 60 years from January 30, 1889, for the establishment of a State Bank in the Persian Empire and the carrying on of the business of a bank of issue and of a financial and commercial institution. Though the period of the concession was 60 years the charter is for a term of 30 years, while there are provisions for renewal. The concession includes, with certain exceptions, exclusive and definite privileges for the term of 60 years of working throughout the Empire the iron, copper, lead, mercury, coal, petroleum, manganese, borax and asbestos mines belonging to the State. Naturally, the mines are not worked by the Bank itself, but the prospectus pointed out that "sub-concessions will from time to time be granted upon terms which it is expected will be productive of large returns to the Bank." As a bank of issue the Bank has the exclusive right of issuing notes which are legal tender for all transactions in Persia. The concession provides that the Government is to be entitled to 6 per cent. on the net profits of the Bank for each year, such share not to be less than £4,000 in any one year. The capital was originally fixed at £1,000,000, in 100,000 shares of £10 each, divided into 99,800 Ordinary shares and 200 Founders' shares, and the capital was offered for subscription at a price of £12 per share. The charter limits the liability of each shareholder to any amount unpaid on the shares held, except in the event of insolvency, when he may be called upon to contribute a further sum, equal to the amount of his holding. In 1894 the capital was reduced by writing off £3 10*s.* of the nominal and paid-up amount of each Ordinary and Founders' share, in accordance with a supplemental charter of December 1894. Accordingly, the present capital is as shown above, £650,000; though the present amount of the share is £6 10*s.* fully paid the reserve liability remains at the original amount of £10 per share. The authorised amount of the

note issue is £975,000. The charter provides that a metallic reserve equal to at least one-third of the note issue shall be held by the Bank and that the amount of notes not covered by such reserve shall not exceed the amount of the paid-up capital for the time being. No change has taken place in the paid-up capital since 1895, but during that period a reserve fund has been built up from £42,287 to £210,000.

In September 1914 the note circulation amounted to £832,012, as compared with £962,419 twelve months previously, while during the year the total deposits fell from £905,995 to £695,368. On the other side of the accounts the cash fell from £1,156,587 to £1,062,141. The call money also fell from £64,016 to £25,926. Similarly the investments dropped from £663,085 to £631,843, and bills receivable from £240,859 to £203,128. We set out herewith a summary of the liabilities and assets for various years since the formation of the Bank.

During the twelve months to September 1914 the bank had to deal with an unprecedented fall in the sterling value of money in Persia and on the Continent as well as a pronounced decline in the value of securities. These two unforeseen events affected profits to a serious extent. The gross profit amounted to £125,656, as compared with £137,037, while the expenses rose from £75,271 to £83,460. Consequently, after providing for the amount due to the Persian Government and for income tax the net profit fell from £51,149 to £31,244. The dividend was reduced from 7.7 per cent. to 6.16 per cent.

It may be pointed out that both classes of shares rank *pari passu* for a cumulative dividend of 10 per cent. (on £10 per share). Of the remaining profits, one-half belongs to the Founders' shares and the other half to the Ordinary and Founders' shares *pro rata.*

The profit record since 1904 is as follows:—

Profits of the Imperial Bank of Persia.

Year ended Sept. 30	Gross Profit. £	Expenses. £	Due to Persian Govt. £	Income Tax. £	Net Profit. £	Dividends. Amount. £	Dividends. Rate. %	Reserve. Invest., Deprn., &c. £	Carried Forward. £
1914...	125,656	83,460	4,000	6,952	31,244	40,000	6·16	—	23,358

The Ionian Bank, Limited, is an Anglo-Greek-Egyptian institution, and was incorporated in 1839. It was a project of the Lord High Commissioner of the Ionian Islands, Lieut.-General Sir Howard Douglas, who suggested its formation as a means for remedying the many grievances and exactions which the small landowners were enduring from the local money-lenders. Overtures were made by him in 1838, through the Agent in London, to certain capitalists for the formation of a Company, which resulted in the incorporation of the Bank with a capital of £100,000, and a convention was finally granted to the Bank by the United States of the Ionian Islands in October 1839. In 1864 the Ionian Islands were united with the Kingdom of Greece, and under the treaty the rights and privileges of the Ionian Bank were protected and guaranteed by the three Great Powers and Greece. It then became a privileged Bank in Greece, and obtained the right by convention to carry on business throughout the Kingdom, and obtained the right to issue notes on its own account up to 9,000,000 drachmas and on Government account up to 3,500,000 drachmas, all of which notes under the Forced Currency Laws became legal tender, but the latter were subsequently redeemed. In 1882 the Ionian Bank Act was passed, and power was given to register the Bank under the English Companies Acts as a Limited Company, which was done in March 1893. On the establishment of the International Financial Control and the readjustment of the Company's finances in 1898 the indebtedness of the Government to the Bank for loans, in some cases forcibly obtained from it, amounted to £181,523, consisting of forced currency notes and Treasury bills, and also 2,000,000 drachmas in notes of the Bank which had been issued by it on behalf of the Government. The notes were withdrawn from

circulation and the other sums regularised by the issue of various bonds. The Bank's privilege as a Bank of issue in Greece terminates in 1920. Its convention requires in respect of its issue of notes that it should lend a certain proportion of its share capital to peasant proprietors at 5 per cent. interest, and that it shall always keep in current money a sum equivalent to one-third of its notes in circulation; but as a matter of fact the Bank keeps both in London and at its branches abroad an amount in first-class securities and in loans on the London Stock Exchange, also money at call with its bankers, equal to 70 per cent. to 80 per cent. of its demand liabilities. In consequence of the extension of commercial relations of Greece with Egypt it was decided to establish a branch in Alexandria in 1907, since when eight sub-branches have also been opened. In Greece, in addition to the office in Athens, there are branches in Patras, Corfu, Cephalonia, Zante, Piræus, Tripolitza, and Nauplia, making the total number of offices in operation 17. For a number of years up to 1910 the paid-up capital remained

Current Accounts are opened and kept on same terms as by London Bankers.

Deposits are received, payable at Seven and Fourteen Days' Notice, and for longer periods, upon terms which can be had on application.

Purchases and Sales effected in all British and Foreign Stocks. Pay, Pensions Annuities, &c., realised free of charge to constituents.

Letters of Credit and Circular Notes issued, payable on the Continent of Europe, Egypt, Africa, China, Australia, New Zealand, America, Canada, &c and the Bank draws upon most parts of India.

unchanged at £315,510, but in June of that year there were offered for subscription 56,898 shares of £5 each, the new capital being required for the purpose of developing and extending the Bank's business in Egypt. Consequently the paid-up capital became increased to £485,580.

By 1911 there had been accumulated a reserve fund of £114,000, but in 1912 it was necessary to withdraw £53,000 to provide for losses sustained in Egypt and for serious floods, reducing the reserve to £65,000, at which figure it still stands. In January last the notes in circulation amounted to £260,833, as compared with £290,878. The deposits amounted to £1,998,900, as compared with £2,170,316. On the other side of the accounts, the total cash rose from £204,642 to £405,493, while call money fell from £330,546 to £73,456. Greek Government loans also fell from £116,812 to £79,976. On the other hand, investments rose from £140,966 to £244,414. Advances dropped from £1,751,239 to £1,634,988. Herewith we set out the liabilities and assets of the Bank for various years from 1878.

For the twelve months to January 1915 the Bank showed a gross profit of £120,483, as compared with £116,837 for the previous year. Expenses remained stationary, but the sum required for interest on deposits rose from £37,323 to £40,133. Consequently, the net profit amounted to £24,700, as compared with £24,434. The dividend was maintained at 5 per cent., and the balance added to the carry-forward, bringing it up to £4,237. The profit record since 1905 is as follows:—

Profits of the Ionian Bank, Limited.

Year ended Jan. 13	Gross Profit (a).	Expenses.	Interest on Deposits.	Net Profit.	Dividend. Amt.	Dividend. Rate.	Reserve, Invest., Deprn., &c.	Carried Forw'd.

(a) Less rebate on bills discounted not due.

* Including the profit arising from the reduction of the converting rate of exchange.

The proportion that the shown net profit bears to the paid-up capital is 5.1 per cent., to capital and reserve combined 4.5 per cent., and to the total working resources .9 per cent.

At the annual meeting in April last Mr. Falconer Larkworthy, the Chairman, pointed out that the receipts in 1914 from the assigned revenues under the control of the International Financial Commission show the large increase of 30 per cent. over the previous maximum, and this will enable the interest and sinking fund on the various loans to be considerably enhanced. Judging from this result, Greece has made a remarkable recovery from the Balkan wars, but its finances in connection with its late heavy expenditure have yet to be adjusted. Mr. Larkworthy dealt in a very full manner with the question of Greek finance and economics, and also with the position in Egypt created by the War in connection with financial and commercial matters. The speech was a most interesting contribution to modern economic literature, and was published in THE STATIST of April 17 last. It should be read by all who are interested in any way in the finance and economics of Greece and Egypt.

As the London and Brazilian Bank was founded in the spring of 1862 it was able to celebrate its jubilee in 1912. A few months after the formation of the Bank the branch at Rio de Janeiro was opened for business, being the first foreign bank to be established in Brazil. During the next two years the Anglo-Portuguese Bank was taken over, three more branches were opened in Brazil, and also two in Portugal. In September 1864, following on the failure of a private bank with very large deposits in Rio, a monetary crisis and panic occurred. The result was that several other private banks experienced a run and had to close their doors. The crisis was the origin of certain lock-ups at the Rio branch which eventually made it desirable to reorganise the Bank. This took place in 1871, since when very steady progress has been made, and at the present time, in addition to the head office in London,

* July 31. † September 30. ‡ June 30.

there are 11 offices in Brazil, 3 in the River Plate, 2 in Portugal, and 1 in Paris, while there is also an agency in New York. For some years up to 1907 the paid-up capital remained unchanged at £750,000, but in that year the rapidly growing business called for an increase, and accordingly in 1908 the paid-up capital was increased to £1,000,000. The business continued to grow in a rapid manner, and it became necessary in 1912 to issue a further £500,000 of new capital, which was made at a premium of £10 per share. Accordingly, at January 31, 1913, the paid-up capital amounted to £1,250,000, while for the first time the reserve fund was brought up to a figure in excess of the paid-up capital, amounting to £1,300,000. At January 31, 1914, the reserve was further increased to £1,400,000.

In January 1915 the deposits amounted to £9,121,689, as compared with £9,443,052. Bills payable also fell from £4,789,517 to £3,852,449, while bills for collection also dropped from £4,769,861 to £3,474,793. On the other side, the cash rose from £4,639,525 to £6,120,586, the proportion to the total assets rising from 20.8 per cent. to 31.4 per cent. On the other hand, however, loans and bills discounted fell from £9,090,750 to £7,318,913, while bills receivable fell from £3,513,906 to £2,308,778. Herewith we set out a statement of the liabilities and assets for various years since 1866.

At the meeting in April 1914 the Chairman drew attention to the severe commercial crises that developed simultaneously in Brazil and the Argentine Republic as far back as the month of June 1913, and mentioned the exceptional anxieties they had caused the Bank. The unfavourable effects continued to develop during 1914, and the crises proved to be far more severe and of much longer duration than was anticipated. The Chairman warned the shareholders that it was impossible for the Bank, with its large and important business in Brazil and Argentina, to come scathless through such an ordeal. The ordeal increased in severity during 1914 and proved far more costly than had been anticipated. The result is that the gross profit for the year to January 31, 1915, only amounted to £526,056, as compared with £679,730 for the previous year. After providing for expenses and taxes the net profit was £193,786, as compared with £341,562. Consequently, the distribution was reduced from 20 per cent. to 15 per cent., as may be seen from the following statement of profits for each year since 1905:—

The proportion that the shown net profit for the year to January 31 bears to the paid-up capital is 15.5 per cent., to capital and reserve combined it is 7.3 per cent., and to the total working resources .9 per cent.

In April last the Chairman pointed out that: "The War has naturally had its effect in both Brazil and Argentina. As regards Argentina, I am glad to say that, according to the last advices, a revival of confidence is showing itself. It will, however, be some time, I think, before the country recovers from its present impecunious position, although the War has created a great demand for its products, and at high

Drafts and Letters of Credit issued, Telegraphic Transfers made, and Bills of Exchange negotiated or collected on the most favourable terms.

The Bank grants Circular Letters of Credit for the use of travellers, and undertakes every description of Banking business.

prices. The country has such a variety of valuable exports that two or three years of 'fair-weather crops' would ensure the return of its former prosperity. It will doubtless interest you to know that the value of the total Argentine exports this year will, according to an estimate I have received from Buenos Ayres, amount to 120 millions sterling. As regards Brazilian finance, to which I referred at some length last year, it is evidently in a state of transition, the country having now to rely on its own resources for a solution of its financial difficulties instead of on foreign loans. The Government is, therefore, meeting its financial requirements by the imposition of new taxes, the instituting of all-round economies, and the issue of internal loans."

The London and Hanseatic Bank, Limited, was established in the year 1873 with an authorised capital of £800,000, of which £666,000 was subscribed in 33,300 shares of £20 each. Only £7 per share was at first called up, and it was not until 1880 that a call of £3 per share was made, bringing the paid-up amount to £10 per share. Since then the shares have remained at £20, with £10 paid up. The capital remained unchanged until 1906, when it was increased to £1,000,000, with £500,000 paid up. The business continued to grow, and in 1909 the authorised amount was raised to £1,500,000, and of the new shares one-half were taken up immediately, the remaining half being offered for subscription in 1913. The last issue of 12,500 shares was subscribed at a premium of £2 per share. The Bank is a commercial undertaking carrying on business in various parts of the world, but very largely in South America.

Up to last year the Bank had also connections in Germany and acted as agent for several German institutions. Moreover, there was an equal number of directors in Hamburg to those in London. But at the outbreak of war the former Hamburg directors resigned their seats. The Chairman has drawn attention to the fact that an erroneous impression had arisen that in consequence of this connection the Bank's business was principally carried on with Germany, but as a matter of fact, at the outbreak of the War the interests in Germany and Austria together amounted to just one-fifth of the total engagements, and the remainder is spread practically over the whole world, both in this country and in other European and Transatlantic countries, the geographical distribution of the commitments being a feature which is regarded as important.

The Bank is not an ordinary deposit institution, and of the total liabilities of £5,469,166 at the end of 1914 the acceptances totalled £4,126,415, while bills discounted and current accounts amounted to £173,551. The result is that the cash in hand and at short notice formed a very small proportion of the total assets, the largest item being bills discounted, current and other accounts, and it is in the increase in the figures of this item that the growth of the Bank may be most readily seen. In 1880 the figure was £873,639 out of total assets valued at £1,490,440. By 1905 the figure was £2,078,652; by 1910 the amount had doubled, reaching a total of £4,374,984.

At the end of 1914, out of total assets valued at £5,469,166, bills discounted, &c., accounted for £4,525,518. The growth of the business of the Bank may be seen from the statement herewith of its liabilities and assets for various years since 1875.

During the first seven months of 1914 the profits were good, but the outbreak of war and the altered conditions resulting from it in all parts of the world compelled the Bank to restrict its operations within a much narrower compass, with the result that the profits for the latter part of the year were much reduced. Moreover, it was not possible to avoid making some losses; but provision has been made for all bad and doubtful debts so far as they can at present be ascertained. The gross profit has fallen from £122,845 to £74,520, and after deduction of expenses there is a net profit of £45,052, as compared with £87,356 for 1913. The dividend has been reduced from 8 per cent. to 6 per cent., and the surplus added to the carry-forward, making it £25,443. Herewith we set out the profit record for each year since 1904:—

The London and River Plate Bank celebrated its jubilee in 1912, inasmuch as it was established in 1862 under the name of the London, Buenos Ayres and River Plate Bank, Ltd., with a capital of £500,000, of which £200,000 was called up. In January 1863 the office of Buenos Ayres was opened. Later in the same year it was decided to increase the capital by £500,000, bringing it up to £1,000,000, and calling up another £200,000. The new issue of capital brought in a premium of £30,000, which was used to start a reserve fund. Shortly afterwards the name was changed to its present form. The Bank was the first English public bank established in Argentina, and during the earlier period of its existence it experienced the fate of most pioneers, the directors having to face times of great difficulty and anxiety in the shape of serious political disturbances, large paper issues of forced currency with its attendant loss and adverse effect on trade and commerce, and financial breakdown generally. For a considerable time the Bank restricted its operations to Argentina and Uruguay, and it was not until 30 years after the opening of the office in Buenos Ayres that the board, observing the steadily increasing trade between the River Plate countries and Brazil, saw the necessity for establishing a branch of the Bank in Rio de Janeiro, and subsequently in San Paulo and in the chief ports of that country. Subsequently Chile attracted the attention of the board as a very desirable field for the establishment of branches, with the result that an office has been open for some time in Valparaiso, and it was announced at the last meeting that steps were being taken to open in Santiago. At the time the last report was issued, in addition to the head office, the Bank had 13 offices in Argentina, 4 in Uruguay, 9 in Brazil, 1 in Chile, 1 in France, 1 in Belgium, and an agency in New York. For a long period of years the paid-up capital remained unchanged at £900,000, and it was not until 1907 that it was increased to £1,200,000, at which figure it remained until 1912, when it rose to £1,800,000. While the paid-up capital remained unchanged at £900,000 the reserve stood at £1,000,000; but this also has been gradually increased since 1907, and at September 30, 1914, amounted to £2,000,000.

Naturally, the severe commercial and financial crisis in Argentina, Brazil, and Chile, together with the effect of the War in those markets and in Europe have had an effect on the business of the London and River Plate Bank, and the bills for collection at September 30, 1914, were only £4,148,844, as compared with £5,956,582 at September 30, 1913. Similarly, the deposits fell from £23,432,461 to £19,913,072, and the acceptances dropped from £6,088,587 to

£4,129,310. On the other side of the accounts it will be seen that a very substantial increase has taken place in the cash, which rose from £7,837,122 at September 30, 1913, to £10,799,963 at September 30, 1914, the proportion to the total assets rising from 19.7 per cent. to 33.3 per cent. Advances, however, fell from £19,693,071 to £12,994,414. Herewith we set out the liabilities and assets for various years from 1863.

Speaking at the meeting in December last the Chairman, after having described the financial and commercial position in the Argentine, Uruguay, Brazil, and Chile when the War broke out, stated that the dreadful calamity could not have taken place at a worse time, so far as their business in South America was concerned. The effect on finance and trade among the great European nations, whose business relations were so internationally woven, was, as all knew and many had experienced, astounding. Exchange with Europe became paralysed, in Chile nitrate shipments ceased, depositors in banks became distrustful, failures increased—in fact, all the concomitant features of an acute financial and commercial crisis were experienced. This perforce entailed on banks the necessity for increasing cash reserves, for the exercise of great discrimination in discounts and advances, which, together with stoppage of trade in most directions, greatly curtailed banking profits. The events which were detailed led up to the paragraph in the report which stated that 'the severe commercial and financial crises in Argentina, Brazil, and Chile, together with the effect of war in those markets and in Europe, had necessitated very large provision for bad and doubtful debts and caused corresponding decrease in profits.' Unlike last year, they had not been able to make the provision wholly out of profits, so it had been done partly out of profits and partly out of the contingent account built up during so many prosperous years. While they had had to avail themselves of this fund in the present unprecedented exigency for the purpose for which it was laid by, they had still an efficient balance for future possibilities and usefulness."

The result is that the gross profit for the twelve months to September 30, 1914, was only £660,691, as compared with £868,793 for the previous year. After providing for expenses the net profit was £238,971, as compared with £422,226. The dividend was reduced from 20 per cent. to 15 per cent., and the carry-forward fell from £306,188 to £275,159.

The profit record since 1904 is as follows:—

Profits of the London and River Plate Bank, Limited.

Year ended Sept. 30	Gross Profit. £	Expenses. £	Net Profit. £	Dividend. Amount.† £	Rate. %	Reserve, Invest., Deprn., &c. £	Carried Forward £

The original title of this institution was the London Chartered Bank of Australia. It was a Bank that was founded by Royal charter in the height of the gold fever. Amongst the founders were two directors of the Peninsular and Oriental Steam Navigation Company and five bank directors. The prospectus was issued in August 1852, and stated that the capital of the Bank would be £500,000 sterling, with power to increase to £1,000,000, in 25,000 shares of £20 each. Eight years after the Bank was founded the capital was increased to £1,000,000, at which figure it remained until it was reconstructed after the 1893 crisis. At the end of 1853 the deposits were £230,665. The growth was rapid, and by 1866 the deposits exceeded £1,000,000. In a further 10 years they had risen to over £2,000,000, and another duplication occurred by 1886, when the deposits rose to over £4,000,000. At December 31, 1892, the deposits were £6,588,236. After the reconstruction under the

* Known as the London Chartered Bank of Australia.

title of the London Bank of Australia, Limited, the authorised capital became £4,000,000, but in 1899 it was reduced to £3,348,090. A further reduction occurred in 1903 to £2,886,067, by writing off £7 10*s.* per share from the Ordinary shares and reducing the nominal amount from £30 to £22 10*s.* The paid-up capital at the present time is £668,832, and consists of 17,193 Preference shares of £10 each, the balance being Ordinary shares of £22 10*s.* each, of which £7 10*s* has been paid up. The Preference shares are entitled to a cumulative dividend up to 5½ per cent., with a further moiety of any divisible surplus profits up to 7 per cent. after 5 per cent. has been paid on the Ordinary shares. They are also entitled to priority for capital, with further participation.

As for the twelve months to December 31, 1914, the Preference shares received a full dividend of 7%, this makes the fifth yearly payment at this rate, and accordingly the Preference shares now cease to be

The Bank of Adelaide, 11 Leadenhall Street, E.C.

BANK OF NEW SOUTH WALES

ESTABLISHED 1817.

London Office:

29 THREADNEEDLE STREET.

Paid-up Capital	**£3,500,000**
Reserve Fund	**2,550,000**
Reserve Liability	**3,500,000**
	£9,550,000

The Bank has 346 BRANCHES AND AGENCIES in the Australian States, New Zealand, Fiji, Papua New Guinea), and London, and Agents and Correspondents all over the World, on whom the London Office grants Circular Letters of Credit and Circular Notes. Also issues Drafts on demand. Makes Mail and Cable Transfers. Negotiates and Collects Bills of Exchange. Receives Deposits for Fixed Periods on Terms which may be known on application; and transacts every description of Australasian Banking business.

DAVID GEORGE, Manager.

entitled to any preference or priority in respect of dividend.

In accordance with the reconstruction scheme of 1893 transferable deposit receipts were issued to the extent of £485,156, which were to be repaid by July 1, 1917. At December 31, 1913, this sum had been reduced to £546,408, but this balance was repaid during 1914, so that the item of transferable deposits has now disappeared from the balance sheet. During 1914 the Ordinary deposits increased by £207,702, of which a considerable sum represents transferable deposits redeposited. The result of the War influence on the Bank's exchange business may be seen in the fall that has occurred in bills payable, &c., which have dropped from £971,898 to £683,358. Similarly on the other side investments and bills receivable have fallen from £1,414,858 to £917,575. On the other hand, cash has risen from £1,196,385 to £1,257,088. It will be noticed that at the end of 1914 the paid-up capital was £668,832, as compared with £548,393 at the end of 1913. This is due to the payment of a call of £2 10*s.* per share. Herewith we set out the liabilities and assets for various years from 1874.

The growth in profits during recent years is of a very substantial character. For 1904 the gross profit of £87,258 was secured, but from this the Bank had to provide no less than £71,365 for interest on deposit receipts so that the amount available for dividend was only £15,893. This steadily rose year by year until for 1913 the balance available for dividend was £86,111. For 1914, with the country suffering from drought and the adverse influences of the War, it is not surprising that the profit showed a slight falling off, reaching £78,394. For 1904 the dividend on the Ordinary shares was 2½ per cent., this rate has gradually risen until for 1914 the distribution was 7 per cent. Herewith we set out the profit record since 1904:—

Profits of the London Bank of Australia, Limited

Year ended Dec. 31	Profit.	Interest on Deposit Receipts, &c.	Balance.	Dividends. Amount.	Pref. Shrs.	Ord. Shrs.	Reserve, &c.	Carried Forward.

4,000 "B" ,, £5 paid ...	£20,000	
Paid up		51,300

The Bank was incorporated in July 1912 as a private company for the purpose of entering into agreements for the acquisition and amalgamation of several banking houses doing business in the Middle East and for mutual working. The intention of the founders was to undertake banking work for rubber and other plantation enterprises, and to aim at providing a planters' bank with direct representation in the Middle East. It was proposed to acquire and establish branches and agencies in the principal cities and ports in Malaya, Java, Sumatra, Borneo, &c.

In May 1913 it was decided to convert the Bank into a public Company and increase the capital to £150,000, the increase being decided upon in consequence of the influx of business, "and to place the Bank in a position to carry through certain proposals for acquiring and amalgamating with this Company several banking houses doing business in the Middle East." The extensions are intended to secure the direct representation of the Bank in the principal cities and ports of Malaya, Java, Sumatra, Borneo, &c., and to further its scheme for devoting special attention to the rapidly increasing business of plantation, mining, and mercantile undertakings within the British and Dutch possessions in the East Indies.

In May 1914 the authorised capital was increased to £300,000, and in July last it was divided into 15,000 "A" shares and 15,000 "B" shares of £10 each, the former to be paid up in full, the latter to be paid up to £5 only with a reserve liability of £5 which is incapable of being called up except in the event and for the purposes of winding up. Herewith we set out the liabilities and assets for each year since formation.

For 1914 the gross profit amounted to £13,409, as compared with £8,754 for 1913. After providing for expenses and the maintenance of the 6 per cent. dividend, there was a balance of £4,600, of which £2,500 was carried to reserve. Herewith we set out the profit record for each year since formation: —

MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch Street, London, E.C.

Capital—

Authorised, 30,000 "A" Shares and 30,000 "B" Shares, £25 each £1,500,000

Paid up, 15,000 "A" Shares, £12 10*s.* paid } 562,500
30,000 "B" " "

Price of Shares: "A" Shares, £19⅞. *Div.* 8*%. *Yield*, £5 13*s.* 2*d.*%
"B" " £20¼ *Div.* 8%*. " £5 10*s.* 9*d.* %

* Free of tax.

In October 1892 the Mercantile Bank of India, Limited, was formed under the Companies Acts, with a capital of £1,500,000, divided into 60,000 shares of £25 each, of which one-half were "A" shares and the other half "B" shares. The "A" shares are entitled to a cumulative preferential dividend of 5 per cent. and to participate equally with the "B" shares in any further dividend declared after 5 per cent. has been paid on the latter. The new Bank took over the whole of the business, assets, property, and liabilities of the old Chartered Mercantile Bank at the price of £375,000, which was paid by the allotment of 30,000 "B" shares credited with £12 10*s.* per share paid up, each shareholder acquiring one "B" share in the new Bank for each £25 fully-paid-up share in the old Bank. The 30,000 "A" shares were offered for subscription for cash, in order to provide additional working capital. Of the £12 10*s.* per share left unpaid on both classes of capital, one-half, or £6 5*s.* per share, is callable, the remainder being reserve capital, only capable of being called up in the event of a winding-up. No change has occurred in the capital, and accordingly the authorised amount is still £1,500,000, the subscribed amount being £1,125,000, and the amount paid up £562,500.

Between the reconstruction in 1892 and 1900 a reserve fund of £40,000 was accumulated, but in the 14 years since that time the reserve has grown to very large dimensions, and at the end of last year it reached a total of £500,000, or only £62,500 short of the paid-up capital. At the end of 1914 the deposits amounted to £5,558,704, as compared with £5,675,696 at the end of 1913. On the other side of the accounts, the cash in hand at the end of 1914 amounted to £1,613,168, as compared with £1,528,713 at the end of 1913. The investments rose from £342,655 to £477,825, while loans, advances, &c., dropped from £3,621,343 to £3,095,511. Bills discounted also dropped from £140,203 to £77,292.

In the table herewith we set out the liabilities and assets of the old Chartered Mercantile Bank for 1861, 1870, 1880, and 1890, and the figures of the Mercantile Bank of India, Limited, for various years since 1900 showing the very substantial progress that has been made since the formation of the institution with limited liability in 1892. An item appears in the accounts of 1912 for the first time since the formation of the Mercantile Bank, namely, £65,980 notes in circulation. In the days of the old Chartered Bank the Bank used to issue notes, and as it was considered that it would be of advantage to have the privilege restored permission was obtained from the Colonial Office to issue notes once again, the whole of which are in circulation in China.

In addition to the office in London there are branches and agencies at Bombay, Calcutta, Howrah, Delhi, Madras, Karachi, Rangoon, Colombo, Kandy, Galle, Singapore, Penang, Kota Bharu, Kuala Lumpur, Batavia, Hong Kong, and Shanghai.

As a result of the continued prosperity of India the Bank has been doing an increasing business and is also increasing its ability to take its proper share in the evergrowing requirements of Eastern banking.

For 1902 the dividend was at the rate of 5 per cent. on the "A" shares and 4 per cent. on the "B" shares, but since that year both classes of shares have fared alike, the rate rising to 8 per cent.

* Reconstruction of the Chartered Mercantile Bank of India, London and China took place in 1892, when name was altered to Mercantile Bank of India.

Naturally the profits for 1914 are rather less than those for 1913, but they form a very good second in the history of the Bank. The gross amount has reached £218,164, as compared with £222,992. This was accompanied by a rise of £5,000 in expenses, so that the net profits have fallen from £111,500 to £101,620. The 8 per cent. dividend only calls for £45,000, so that it will be realised a conservative distribution policy is followed.

In the following we set out the profits for each year since 1904:—

Profits of the Mercantile Bank of India, Limited.

Year ended Dec. 31	Gross Profits. £	Salaries and Other Expenses. £	Net Profits. £	Dividends. Amount. £	Dividends. Rate. %	Reserve, &c. £	Carried Forward. £

The proportion that the shown net profits for 1914 bear to the paid-up capital is 18.1 per cent., to the capital and reserve combined 9.5 per cent., and to total working resources 1.3 per cent.

At the meeting in March last the Chairman pointed out that it would be dangerous, if not impossible, to predict as to the future. A great deal depends on the duration of the War, "but it is well to bear in mind that the purchasing power of Europe at any rate will be greatly reduced after this enormous expenditure of capital which is unproductive, and there will be a period of recuperation that may not make for activity in trade."

MERCHANTS' BANK OF CANADA.

Head Office: Montreal, Canada.

Capital—

Authorised	$10,000,000
Subscribed	7,000,000
Paid up	7,000,000

Price of Share, $180. *Dividend*, 10%. *Yield*, £5 12*s.* 8*d.* %

The Merchants' Bank of Canada was established in 1864, and has its head office at Montreal. At November 30, 1914, the paid-up capital amounted to $7,000,000, while the reserve fund also reached the same figure.

The total deposits at April 30 last amounted to $62,729,163, as compared with $59,256,044 twelve months previously. The note circulation rose from $5,597,714 to $6,204,069, while the acceptances rose from $76,039 to $696,100. Balances due to other banks fell from $3,766,721 to $2,140,281. On the other side of the accounts the chief change is in the total cash held, which rose from $11,651,914 at April 30, 1914, to $18,824,409 at April 30 last, the proportion to the total assets rising from 14 per cent. to 21.8 per cent. On the other hand, however, the loans, discounts, &c., fell from $54,263,508, or 65.3 per cent. of the total assets, to $49,100,637, or 57.8 per cent. The investments rose from $5,289,080 to $6,455,861, while call money fell from $6,889,959 to $4,570,536. Sums due by other banks rose from $1,092,451 to $2,235,766. Herewith we set out the liabilities and assets of the Bank for various years from 1900.

During the twelve months to April 1915 the earning power of the Bank has been necessarily very much less than for some years back. Two years ago the real estate boom in Canada was giving indication of weakness, and Canada had a well-defined reaction in full swing, becoming more and more accentuated up to the time of the breaking out of the War in August 1914. Measures were taken in Canada by the Finance Minister in palliation of the situation. Bank-notes were declared legal tender, and the situation was seriously grapped with. The profit of the Merchants' Bank fell from $1,218,694 to $947,006. The Bank, however, was able to maintain its dividend at 10 per cent. and write off a sum of $250,000 for depreciation in bonds and investments. Herewith we give the profit record since 1904:—

Profits of the Merchants' Bank of Canada since 1904.

Year ended Nov. 30	Profit. $	Dividends. Amt. $	Dividends. Rate. %	Balance. $	Reserve, &c. $	Carried Forward. $

Manager pointed out that at the present time, considering Canada as a whole, trading and business are not active. "War orders have, however, greatly stimulated certain special lines. These have meant profit and employment to many. Trade is quiet otherwise and disappointing, even dull, but the scale of living and rentals has come down and a careful economy is being generally practised. We have much to hope for from the crop prospects, which at this date are unusually promising throughout the North-West, and no less so in the East. Seeding for the most part is two weeks earlier, and the rainfall so far has been abundant. When we add to this that the acreage is claimed to be 20 per cent. in excess of last year, we think the outlook at least encouraging for Western interests. The crop last year was a great disappointment in matter of quantity, but it was offset in great degree by the excellent price for grain. The policy of mixed farming continues to be prosecuted more and more in the prairie country, to the substantial advantage and profit of the producers and the enrichment of the soil."

Capital—

Authorised	$5,000,000
Subscribed	4,000,000
Paid up	4,000,000

Price of Share, $201. *Dividend,* 11%. *Yield,* £5 11*s.*%.

ENGLISH investors are specially interested in The Molsons Bank by reason of the fact that in 1910 $500,000 of capital stock, in shares of $100 each, were offered for sale in London, Parr's Bank receiving applications at the price of $216 per share, and as a result a London register of shares has been established, and the stock forming the issue is transferable by transfer in common form on the London register. The Bank was established in 1855 and is thus one of the oldest banks in Canada. Its career has been distinctly successful, as may be gauged from the fact that on an average capital since incorporation of $1,957,186 an average rate of dividend of 8.32 per cent. has been paid, the actual amount paid in dividends since the incorporation up to September 1914 being $10,366,479. The first balance sheet was made up to July 26, 1856, and was issued in sterling. It showed that the paid-up capital was £75,594, while deposits amounting to £49,290 had been accumulated. In currency figures the paid-up capital was $387,384, while the deposits amounted to $240,000. By 1860 the business had so grown that the paid-up capital was increased to $1,000,000. In 1904 the reserve fund was brought up to a figure equal to the paid-up capital of $3,000,000. Until 1909 the reserve fund was increased *pari passu* with the increase in the paid-up capital, but at September 30, 1910, with the capital raised to $4,000,000 the reserve fund was brought up to a total of $4,400,000. Since then the capital has remained unchanged, but the reserve fund has risen to $4,800,000. By 1880 the total deposits amounted to $3,046,063. In the 10 years to 1890 they doubled, amounting to $6,863,000. By 1900 the deposits again doubled, reaching a total of $13,111,000. A further duplication occurred in the years up to 1909, when they reached a total of $27,521,000.

At September 30, 1914, the deposits amounted to $37,018,387. The acceptances, which at September 30, 1913, amounted to $101,910, dropped to $48,670 at September 30, 1914. On the other side of the accounts the cash fell from $7,647,864 to $6,311,771, the largest fall occurring in Government demand notes, which dropped from $4,472,325 to $3,458,242. The notes and cheques of other banks dropped from $2,665,975 to $1,796,875. But gold and silver coin rose from $569,564 to $1,056,654. Call and short loans dropped from $5,724,203 to $5,221,693. The investments, however, rose from $2,691,088 to $2,771,640, while loans, discounts, &c., rose from $31,039,497 to $32,570,659. Herewith we set out a statement of liabilities and assets for various years since the formation of the Bank.

The report pointed out that the general business of the Bank was in a satisfactory condition, notwithstanding the existing depressed state of affairs in Canada due to decline in values of real estate, the curtailment of business generally prior to the War, and the unprecedented and extraordinary conditions brought about by the War. The profits for the twelve months to September 1914 amounted to $608,196, as compared with $694,357. The dividend was raised to 10 per cent. in 1905 and to 11 per cent. in 1911, a rate which was repeated for 1912, 1913, and 1914.

The profit record since 1904 is as follows:—

Profits of the Molsons Bank.

Year ended Sept. 30	Profits.	Taxes.	Dividends. Amt.	Dividends. Rate.	Reserve, Invest., Depn., &c. Balance.	Carried Forward.
	$	$	$	%	$	$

1904 ...	457,291	9,662	266,929	9	180,700	169,379	37,077

The proportion that the shown net profits for last year bear to the paid-up capital is 15.2 per cent., to capital and reserve combined 7.0 per cent., and to total working resources, amounting to $50,390,344, 1.2 per cent.

At the meeting in November last the President said: "While the slowing-up in trade has forced some factories to run on short time, yet the situation is somewhat relieved by the very large orders for boots, clothing, and military supplies which many factories are now receiving from the Government, and also by the increased demand for pulp and paper caused by the War. The abundant crops in the country, and the unusual demand for farm products, including cheese, butter, wheat, live stock, &c., in consequence of the

* July 26.

War, have stimulated business throughout the farming sections of Canada. The Eastern Provinces have benefited largely, and the crops in the Western provinces, although not as large as in former years, are of excellent quality, and the increased prices for grain and cattle have strengthened the financial position of the farmers. The almost certain prospect of higher prices for another season or so has encouraged the farmers to prepare very much more ground for seeding than usual. The price of horses, which had fallen very considerably of late, has been practically regained, owing to the large demands of the War Office for horses suitable for Army purposes; although heavy horses are still difficult to sell. Country payments are well met, and the farmers' business, which, after all, is the foundation of the country's trade, is sound. I think the present depression, by forcing a stop to the extravagant expenditures of the last few years, both public and private, will put the country on a much sounder basis, and will prove a blessing to Canada."

NATIONAL BANK OF AUSTRALASIA, LIMITED.

Dividend, 7 %.

THE establishment of this Bank took place some six years after the gold discoveries in Australia, a preliminary prospectus being issued in November 1857. The prospectus stated: "It will be the desire of this Bank in the prosecution of its business to render all possible accommodation and facilities consistent with its proper functions to the merchant, trader, manufacturer, settler, agriculturist, and miner, as well as to any other industrial classes in this colony. The chief office shall be in Melbourne, and it is intended subsequently to establish branches at Geelong, Ballarat, Castlemaine, Bendigo, and the other goldfields, and at such other places in the interior as may be considered necessary and advantageous." Some delay in establishing the Bank took place, and in June 1858 the prospectus was again issued with some slight amendments. At September 30, 1892, the deposits amounted to £8,997,006, while the reserve funds totalled £670,000. In 1893, in consequence of the heavy withdrawals, and in common with other institutions, payment was suspended. The Bank was reorganised, however, and additional capital brought in. In 1900 the capital was reduced from £4,000,000 to £3,407,904 by writing off £2 per Ordinary share and cancelling 11,512 shares which had been forfeited. The authorised amount has since remained at that figure, and the paid-up capital is now £1,498,220, and consists of 30,578 Preference shares of £10 each and 238,488 Ordinary shares of £5 each. The nominal amount of the Ordinary shares is £8, while the Preference share is £10, so that the Preference shares are fully paid, while there is a liability of £3 per share on the Ordinary shares. The Preference shares are entitled to a preferential dividend of 5 per cent., and to rank with the Ordinary after they have received 5 per cent. They are also entitled to priority for capital until at least 10 half-yearly dividends at the rate of at least 7 per cent. per annum shall have been paid.

The reserve fund, which was wiped out at the time of the reconstruction, has steadily grown again, and at March 31 last, with a transfer of £20,000 from profits, it was brought up to a total of £545,000. In 1905 the deposits were £6,500,000, while on March 31 last

The Citizens Central National Bank of New York.

In the Centre of the Down Town Wholesale District.

they reached a total of £11,196,569, as compared with £11,409,107 in March 1913. On the other side of the accounts, the cash rose from £2,734,502 to £3,212,400; investments also rose from £567,852 to £585,036; bills discounted and other advances, however, fell from £9,306,647 to £8,914,253. This is mainly due to the fact that curtailment of export and other trade reduced the banking requirements of many of the Bank's large mercantile connections throughout the States, and attention was drawn by the Chairman to the fact that it has not been the policy of the Bank to restrict credit injuriously, and that, on the contrary, the policy of the management since the outbreak of war has been to afford its borrowing and exchange customers all the usual facilities, and, in addition, to endeavour to assist them specially in tiding over the unusual conditions of the time. Herewith we show the liabilities and assets of the Bank for various years since 1867

Very substantial growth in profits has occurred during the past 10 years, both gross and net profits more than doubling in amount. For the year to March 31, 1904, a gross profit of £193,685 was secured, the net profit amounting to £71,108, which permitted of the 5 per cent. Preference dividend being paid and a distribution of 3½ per cent. being made on the Ordinary shares.

For the twelve months to March 31, 1914, the gross profit amounted to £389,338, while the net profit reached a total of £184,140. For the year to March 1915 the gross profit amounted to £386,095, while the net profit reached a total of £176,298. In March 1914 the dividend on both the Preferred and the Ordinary capital was increased to 7 per cent., a rate that has been maintained for the twelve months to March 1915.

The profit record since 1905 is as follows:—

Profits of the National Bank of Australasia, Ltd.

Year ended March 31	Gross Profit. £	Salaries and other Expenses. £	Net Profit. £	Dividends. Amt. £	Pref. Shs. %	Ord. Shs. %	Reserve, &c. £	Carried Forward. £
1915 ...	386,095	209,797	176,298	104,876	7	7	60,000	27,895
1914 ...	389,338	205,198	184,140	104,876	7	7	79,000	16,472
1913 ...	408,063	206,087	201,976	97,385	6½	6½	99,000	16,208

The National Bank of Egypt was formed under Egyptian law for a period of 50 years, and is to all intents and purposes the State Bank of Egypt. It started originally with a capital of £1,000,000 sterling, but in the following year the capital was increased to £1,500,000, which was the amount paid up in the first balance sheet issued by the institution. In 1903 50,000 new shares were issued at a premium of £4 per share. In 1904 the same number of new shares was issued at a premium of £6 per share. This was followed in 1905 by a further issue of 50,000 new shares, which were placed at a premium of £10 per share. The capital has remained at £3,000,000 since 1905. The Bank has the sole concession for the issue of bank-notes in Egypt, the power of circulation being unlimited. In addition to the head office in Cairo there are offices in Alexandria and London, together with 16 branches in Egypt and three in the Soudan. The Bank was founded for the purpose, among other things, of enabling banking assistance to be given to the fellaheen of Egypt, and at the end of 1901 a sum of over £400,000 sterling was invested in these loans, nearly the whole being covered by mortgages. The business was so successful that it was possible to have put out a much larger sum, but the directors came to the conclusion that a larger part of the Bank's capital could not prudently be devoted to this business. It was announced at the meeting in March 1902 that, on account of the good that was being done in this direction, the Government was desirous of extending the system, and had agreed to advance the Bank £250,000 to enable the work to continue. It was found, however, that this could only be in the nature of things a temporary expedient, and finally towards the end of the year there was brought into existence the Agricultural Bank of Egypt, to

which the National Bank handed over its fellaheen loan business. In addition to a considerable holding of Ordinary shares the National Bank possesses half the Deferred shares of the Agricultural Bank. It also holds an important interest in the Cassa di Sconto Bank. A distinctly successful career has been experienced by the institution. It has filled a badly felt want in Egypt and has also done well for its shareholders.

The main feature of the accounts for 1914 is the largely increased amount of the bank-note issue, which is £E.1,464,954, as compared with £E.2,236,117, and on this question the Governor pointed out that:—

"On the declaration of war the importation of gold into this country became no longer possible, and to meet the demand for currency necessary for commerical requirements, the Egyptian Government decreed the notes of the National Bank of Egypt to be legal tender throughout the country and at the Bank. This prompt measure, for which I think everybody in Egypt is deeply grateful to the Government, coupled with the immediate steps taken in England by the Treasury and the Bank of England to re-establish the discount market, made the financing of the cotton crop to the extent of its demand an easy matter from the point of view of sufficiency of funds. Our Bank, I am glad to say, worked in cordial co-operation with the Government, and has fully proved its utility in the hour of need. Without availing itself of the moratorium, the Bank not only financed the cotton crop, but was also able to give assistance right and left in the

earlier days of the crisis when there was a run on the banks and before the notes were made legal tender.

"While not departing from our statutory backing of the notes, namely, half gold and half gilt-edged securities of the Egyptian Government's approval, we were able to expand the currency in Egypt by purchasing and depositing against the note issue Egyptian Government three months' Treasury bills, the amount of which was passed to the credit of the Ministry of Finance."

The deposits at the end of 1914 amounted to £E.7,092,211, which compares with £E.391,696 shown in the first accounts issued. The total assets in the first balance sheet stood at £E.3,274,778, while at December 31, 1914, the total assets were £E.19,499,943. From a comparison of these figures the growth of the institution may be seen, but in order to give a clearer view of the great growth that has occurred we set out herewith an abstract of the liabilities and assets for each year since the formation of the Bank, the figures being given in Egyptian pounds.

The first dividend was 7 per cent., but as 1901 was much less prosperous the dividend was reduced to 5½ per cent. For 1902 and 1903 the rate was 6 per cent. per annum; it was raised to 7 per cent. for 1914, to 8 per cent. for 1905, and to 9 per cent. for 1906, at which figure it remained until 1911, when it was reduced to 8 per cent., a rate which was maintained for 1912. For 1913 the rate was 7½ per cent., but for 1914 the dividend has been reduced to 4 per cent.

We set out herewith a statement of the profits made for each year since the formation of the Bank:—

Profits of the National Bank of Egypt.

(a) Less rebate of interest on bills not yet due.
* Includes £E.219,375 taken from reserve.

The proportion that the shown net profit bears to the paid-up capital is 10.5 per cent., to capital and reserve combined 7.4 per cent., and to the total working resources, amounting to £E.19,499,943, 1.6 per cent.

Mr. F. T. Rowlatt, the Governor, pointed out in March last that although Egypt is suffering from the effects of the War, yet it is only a question of economy for a time. The necessary foodstuffs are abundant, and her only important industry, which is the production and refining of sugar, has done very much better during the War owing to the rise in prices of that article. "Then we must look to the future. The political status of the country is altered. She is free to borrow and develop her resources. It will be possible to take up again the great drainage and irrigation works, with a free hand to make satisfactory financial arrangements."

NATIONAL BANK OF INDIA, LIMITED.

This important Indian Bank was established September 29, 1863, and under the charge for many years of Mr. Robert Campbell as General Manager, and subsequently as Chairman, has had a most prosperous career. Originally the head office was in Calcutta, but in 1866 it was transferred to London and the Bank registered under the Companies Act of 1862 on March 23, 1866. In 1866 the authorised capital was £2,000,000, the subscribed capital being £933,000, and the amount paid up being £466,500. By 1891 the subscribed capital was increased to £1,000,000 and the paid-up capital was increased to £500,000. In 1905 the subscribed capital was further increased to £1,200,000 and the paid-up capital to £600,000 by a distribution to the shareholders out of accumulated profits of 8,000 bonus shares of £25 credited with £12 10*s*. paid up, the distribution being at the rate of one bonus share for every five shares held. In 1908 the subscribed capital was increased to £1,600,000 and the paid-up capital to £800,000 by another distribution to shareholders out of accumulated profits, consisting of 16,000 bonus shares of £25 each credited with £12 10*s*. per share paid up, at the rate of one bonus share for every three shares held. In 1911 the subscribed capital was increased to £2,000,000 and the paid-up capital to £1,000,000 by a fresh distribution to shareholders out of accumulated profits of 16,000 bonus shares of £25 each credited with £12 10*s*. per share paid up, at the rate of one bonus share for each four shares held. As no further change has occurred the paid-up capital still remains at £1,000,000.

In 1867 the reserve fund was £30,000, but in consequence of the subsequent depression by 1870 it fell to £19,000. Since that date uninterrupted progress has been made with the building up of this fund, and it has been brought up to £1,175,000, or £175,000 more than the paid-up capital. In 1867 the deposits were £713,000; by 1870 they had doubled, amounting to £1,400,000; in the following 20 years they increased threefold, amounting in 1890 to £4,256,000; by 1905 they had again more than doubled, reaching £9,600,000; at the end of 1910 they further rose to £12,150,000; and at the end of 1913 they were £14,876,240.

Comparatively little change occurred in 1914, and at December 31 deposits were £14,832,899. The acceptances rose from £981,205 to £1,005,836, while loans and bills payable dropped from £1,681,732 to £943,947. On the other side of the accounts the cash rose from £3,531,378 to £4,254,985, and the investments from £820,141 to £1,029,971, but the bills of exchange dropped from £6,400,093 to £5,979,465. Herewith we set out a statement of the liabilities and assets for various years since 1867.

The profit for 1914 is shown as gross £511,146, as compared with £523,858, while after providing for expenses the net profit is shown as £269,371, as compared with £294,617. The decrease is not due to any diminution of the Bank's earning powers. There has been no falling off whatever in that respect, and the reduction is entirely owing to the larger amount placed this year to bad and doubtful debt account to provide for the larger requirements occasioned by the War. The Bank is able to maintain the dividend at 16 per cent., while a total of £75,000 is carried to the reserve fund.

The profit record since 1904 is as follows:—

Profits of the National Bank of India.

Year ended Dec. 31	Gross Profits.	Salaries and Other Expenses.	Net Profit.	—Dividend.— Amt.	Rate.	Reserve, &c.	Carried Forward.

The proportion that the shown net profits bear to the paid-up capital is 26.9 per cent.; to capital and reserve combined 12.8 per cent.; and to the total working resources 1.4 per cent.

Speaking at the meeting in March last Mr. Robert Campbell said: "As regards the future, I am glad to say that, so far as the current year has gone, our business has been quite satisfactory. Our only complaint is the falling off in the volume of business, but this is, perhaps, only what was to be expected, and I am afraid there is no immediate prospect of any improvement in this respect. Of course, so long as the War continues the greatest care and caution will be necessary; and, therefore, while prepared to meet all the legitimate wants of customers, our policy will be to continue to maintain our present strong financial position." It may be added that, in addition to the head office of the Bank in London, it has 26 branches, including eight in East Africa, where it acts as the Government bankers.

NATIONAL BANK OF NEW ZEALAND LIMITED.

THE National Bank of New Zealand, Ltd., was formed in August 1872. The head office is in London, and there are 58 branches and agencies in New Zealand. At March 31, 1913, the issued capital was £500,000, the authorised amount being £3,000,000. But in April 100,000 new shares were offered to shareholders at a premium of £1 5*s.* per share, in the proportion of one share for every two shares held. As a consequence of this new issue the paid-up capital is now £750,000, so that the paid-up amount has been increased by 50 per cent. The reserve now amounts to £685,000. The notes in circulation amounted to £465,515, as compared with £255,899, but, on the other hand, bills payable dropped

* Includes £2,737 preliminary expenses.

from £899,674 to £699,093. Deposits, however, rose from £4,304,654 to £4,740,397. On the other side of the accounts, the cash rose from £1,171,137 to £1,233,272, the investments from £522,415 to £659,067, and bills receivable from £833,843 to £1,370,158, while bills discounted fell from £808,555 to £578,163, and advances from £3,554,338 to £3,442,888. Herewith we set out a statement of the liabilities and assets for various years since the formation of the Bank.

A distinctly satisfactory time was experienced during the twelve months to March 1915, and the gross profits rose from £258,024 to £275,239. This was accompanied by an increase in expenses from £113,128 to £125,476, so that the net profit rose from £144,896 to £149,763. The dividend was maintained at 13 per cent., a rate that has been paid for each year since March 1911. The profit record since 1905 is as follows:—

Profits of the National Bank of New Zealand, Ltd.

Year ended Mar. 31	Gross Profit. £	Salaries and other Expenses. £	Net Profit. £	Dividend. Amt. £	Rate. %	Reserve, &c. £	Carried Forward. £

The proportion that the shown net profit bears to the paid-up capital is 19.9 per cent., to capital and reserve combined 10.6 per cent., and to the total working resources 2.1 per cent.

At the meeting in July last, Mr. Robert Logan pointed out that for the first four months of the Company's banking year the business did not present any features of particular importance. In August and September they suffered in common with all other institutions, and he added: "Since then their business had been exceedingly good, though under altered conditions. New Zealand was primarily and chiefly an agricultural country, and they would recognise what that meant when he told them that the exports of produce last year amounted to about 27½ millions sterling, as compared with 23¼ millions sterling in the previous year. Of that enormous total wool contributed 10½ millions, frozen meat nearly 6½ millions, and dairy produce nearly 4¾ millions. These figures were largely in excess of those of the previous year not only in quality, but also in value. The imports into New Zealand, on the other hand, showed a decrease from 22¼ millions to nearly 20½ millions, so that the surplus of exports of the Dominion, which last year amounted to £1,150,000, increased to about £7,000,000 in the year ended March 31 last. New Zealand had had, since the war began, a period of unexampled prosperity. There had been no labour troubles in the Dominion since he last addressed the proprietors, and the workers had set an admirable example of industry and patriotism. The war, the widespread drought in Australia, and the bountiful seasons in New Zealand had all contributed to this prosperity. While, however, the people of the Dominion were keenly sensible to their financial gain, and recognised that the nature of their products made that gain inevitable, they were all the more zealous to play their full part in the defence of the Empire. 'Last year, in his review of the progress of the Dominion, he drew the attention of the proprietors to the new industry of fruit farming, and expressed his expectation that the produce would in a few years form an important addition to the exports of New Zealand. The area under fruit, chiefly apples, in 1910 was 31,700 acres, and in 1914 42,300 acres. One hundred tons to the acre was below the average, yet that gave a million trees added in four years, and when six years old each tree should yield 20*s.* a tree. Further, much land previously regarded as of little value, which required 7 to 10 acres to support a single sheep, and was assessed dear at 7*s.* 6*d.* an acre, had been found most suitable for this industry. Where trees were in full bearing it was estimated that a small family could live on 8 to 10 acres."

The National Bank of South Africa, Limited, acts as bankers to the Union of South Africa, both in the Transvaal and Orange Free State. Its head office is in Pretoria. It was constituted in 1890, under a con-

cession from the Volksraad of the late South African Republic, its name being changed in 1902, when its concession was abandoned and the continued incorporation of the Bank provided for by an Order in Council of the British Government passed in August 1902. The concession fixed the capital at £4,002,000, in £10 shares, which included 200 Founders' shares, but in 1892 it was reduced to £1,002,000, with power to increase it to its former amount. A further reduction occurred in 1899 to £1,000,000, which was brought about by the cancellation of the Founders' shares, but it was immediately increased to £1,100,000 by the creation of 10,000 shares, the latter being issued in 1903, as to 5,000 shares to certain shareholders in lieu of the Founders' shares, 2,500 to shareholders in consideration of their waiving all right to cumulative dividend. and 2,500 to the Government of the Transvaal in consideration of its waiving all right to 20 per cent. of the surplus profits.

During 1910 the National Bank purchased the business of the National Bank of the Orange River Colony—a business which had been in existence for over 32 years. The price paid was £20 2*s*. 9*d*. per share for the 20,000 shares of this Bank, or a total of £402,750. The purchase account is being written off by annual instalments.

The paid-up capital remained at £1,100,000 until 1912, when arrangements were come to for the acquisition of the Bank of Africa, Limited. This necessitated an increase in the capital to £2,350,000 in £10 shares, which are fully paid. The number of offices open at the end of 1911 amountd to 137, but with the absorption of the business of the Bank of Africa, which had 63 branches open, and with the opening of other new branches, the total number of offices open at the end of 1912 was 195. At the end of 1908 the Bank had a reserve of £140,000, but owing to the continued depression in the value of landed property throughout South Africa, and with a prospect that better values were not likely to be secured within a reasonable period it was decided to transfer £90,000, from the reserve, leaving the balance consequently at £50,000, at which figure it remained until the end of 1910, when it rose to £70,000. From the profits of 1911 a total of £50,000 was added to the reserve, thereby increasing it to £120,000. But by reason of the acquisition of the Bank of Africa the reserve was substantially increased to £370,000, while a further £130,000 was appropriated from the profits of 1912, thereby increasing the fund to £500,000.

A further expansion took place in July 1914, when the National Bank absorbed the Natal Bank. It thereby became necessary to increase the subscribed and paid-up capital to £2,782,420, the authorised capital being £4,000,000. The reserve fund has been brought up to £525,000. Naturally the absorption of the Natal Bank business has increased the figures of the National Bank's balance sheet, and the notes in circulation at March 31, 1915, amounted to £1,163,741, as compared with £793,130 twelve months previously. Similarly the acceptances have risen from £2,956,419 to £20,832,622. On the other side of the accounts cash has risen from £3,519,194 to £4,433,304, call money from £1,474,077 to £2,957,725, investments from £1,052,709 to £1,378,527, and advances from £14,438,877 to £15,700,541. Herewith we set out the liabilities and assets for various years from 1893.

The gross profits for the twelve months to March 31, 1915, are shown as £622,640, as compared with £843,657, and after providing for expenses the net profits are £156,373, as compared with £411,172. This fall is more apparent than real, inasmuch as the gross profits were in reality quite as good as in the preceding year. After taking over the Natal Bank a complete re-valuation of the assets acquired was made, and it was found that a much larger sum than was at first estimated would be required to be provided. With the exception of an amount of £175,000, which was taken from reserve, the provision has been made out of profits, which, as a consequence, are materially lower than would have been the case under normal conditions. It is possible, however, to maintain the dividend at 6 per cent., which is distinctly satisfactory in the circumstances.

In the following statement we set out the profit record since 1905:—

Profits of the National Bank of South Africa.

• March 31. † Including balance of purchase account of National Bank of the Orange River Colony.

The proportion that the shown net profits bear to the paid-up capital is 5.6 per cent., to capital and reserve combined 4.7 per cent., and to the total working resources .6 per cent.

Discussing the question as to the likelihood as to the course of trade and business after the War, the Chairman of the National Bank of South Africa said in May last that he was inclined to the opinion that, comparatively speaking, there will not be any great depression in South Africa, and he added: "In the first place, we are happy in the knowledge that our gold mines are prospering, and although we cannot deny the truth of the dictum that these, as time goes on, are a wasting asset, it will yet be long ere the industry perceptibly wanes, while there is the prospect that new fields will be opened up. Meanwhile we know that other industries are being established and developed, and it cannot be long before South Africa will become a material factor in the production of foodstuffs for consumption overseas. The future, nevertheless, is always difficult to foresee, and with war proceeding on a scale such as the world has never before experienced, it is even harder than usual to be prescient. Should, unhappily, hostilities continue for any further long period, it is conceivable there may be a plethora of money owing to the partial cessation of commercial enterprise; but, with the resumption of peace, it seems reasonable to apprehend a scarcity of capital, so that borrowers will then find themselves in the position of having to pay more for their requirements. Where countries, such as ours, in the developing stage and looking for capital from overseas, are concerned, the effect of dearer money will be that they will be compelled to offer greater inducements than hitherto if they are to have their financial needs supplied. These, gentlemen, are all factors to be considered; but although our progress during the coming year may be somewhat retarded, I am convinced that, with its natural resources, South Africa is well entitled to face the future complacently, while, at the same time, it must be prepared for an interval—I hope brief—of depression."

The Provincial Bank is one of the youngest of the Canadian banking institutions, as it was incorporated in July 1900. Steady progress has been shown by the young institution, as may be gathered from the fact that whereas on December 31, 1900, deposits were only $1,524,243, by the end of 1914 they had risen to $9,189,703. In 1907 the paid-up capital was increased to $1,000,000, at which figure it has since remained, but the reserve fund has risen since 1907 from $200,000 to $650,000.

The total deposits at the end of 1914 amounted to $9,189,703, as compared with $8,821,908 at the end of 1913. On the other side of the accounts the cash rose from $1,979,609 to $2,395,307, but the investments fell from $3,053,551 to $2,572,923. Current loans and discounts rose from $5,572,772 to $6,064,660. Herewith we set out the liabilities and assets of the Bank for various years from 1900.

The steady growth is reflected in the profit and loss account and in the dividends. For 1913 the profits reached the record amount of $180,781, the dividend being maintained at 6 per cent., though the President announced that "it is more than probable" an increase of dividend will take place in 1914.

This forecast was verified, inasmuch as the Bank was able to show an increase in the profits from $180,781 . to $194,215, the dividend rising from 6 per cent. to 7 per cent.

The profit record since 1904 is as follows:—

Profits of the Provincial Bank of Canada.

The proportion that the shown net profit bears to the paid-up capital is 19.4 per cent., to capital and reserve combined 11.7 per cent., and to the total working resources 1.4 per cent.

The Bank has opened altogether 69 branches, of which 55 are in the Province of Quebec, Ontario, and New Brunswick.

QUEBEC BANK.

Head Office: Quebec.

Capital—

Authorised	$5,000,000
Subscribed	2,734,700
Paid up...	2,734,620

Price of Share, $119. *Dividend*, 7%. *Yield* £5 17*s.* 8*d.* %.

The Quebec Bank was founded as far back as 1818. The head office of the institution is at Quebec, while the General Manager's office is at Montreal. The first report issued showed that the paid-up capital was $210,000, while a reserve fund of $9,648 had been set aside. The deposits were $160,656. By 1840 the capital was increased to $300,000, and by 1850 to $400,000. Between 1850 and 1860 a rapid expansion occurred, the capital increasing to $1,000,000. In 1870 it rose to $1,500,000, and by 1880 to $2,500,000, at which figure it remained until the end of 1913, when, owing to the increased business, the directors considered it advisable to issue 5,000 shares of the unissued capital, thereby bringing the amount paid up to $2,734,620 in October last. During the earlier years naturally the allocations to the reserve fund were of a comparatively small amount. By 1860 the reserve amounted to $145,764; in the ensuing 10 years depression was experienced and it fell by 1870 to $30,000. Since then, however, the growth has been rapid, and by 1890 the reserve rose to $500,000; by 1900 it was $700,000, by 1907 $1,250,000, at which figure it remained until 1913, when, with $56,962 of premium on new stock issue added it was brought up to $1,306,962. It is now $1,308,655. Between 1860 and 1870 the deposits rose from $455,388 to $1,892,994. By 1890 they amounted to over $5,000,000, and by 1900 to over $7,000,000. In May 1910 the total deposits amounted to $10,044,177, but

THE NATIONAL BANK, LIMITED.

Current Accounts are opened and conducted in conformity with the practice of London Bankers. Current Account Customers have the usual facilities for the discounting of approved Bills, obtaining Loans upon negotiable Securities, depositing Bills, Coupons, &c., for collection, and of lodging with the Bank Deeds and other valuable property for safe custody. Every facility is afforded for the transmission of money and for the receipt and delivery of Stocks, Shares, &c., between London and Ireland. The Bank undertakes the collection of Dividends, Annuities, Pensions, &c., for its Customers free of charge, and transacts every description of Banking Business, including the Purchase and Sale of Stocks, Shares, Securities, &c.

Deposits in sums of £10 and upwards are received from the public at the current rate of interest allowed on such accounts, subject to seven days' notice of withdrawal. And at all Branches in Ireland, deposits from 1*s.* upwards are received under the head of "National Thrift."

Letters of Credit payable at the chief commercial cities and towns of the world are granted.

Circular Notes are issued by the Bank addressed to all and payable at any of the places on the Continent where the Bank has an Agent.

Ireland.—Drafts are granted on the numerous Branches of the Bank and Bills, &c., collected in the principal Cities and Towns in Ireland.

*** Every Officer signs a Declaration of Secrecy as to the Accounts of Individuals and the affairs of the Bank generally.

A. LOCKYER, *Secretary*.

by October 1912 an increase of 50 per cent. occurred to $15,563,613. In 1913 they were $14,723,457. At October 31, 1914, they amounted to $13,192,971. Herewith we set out the liabilities and assets of the Bank for each year since 1905.

In accordance with their usual habit, a conservative course has been followed by the directors during the twelve months to October 31, 1914, and they deemed it advisable, owing to the unsettled state of financial conditions, to maintain the cash reserves rather larger than usual. This policy had an effect on the earning power, but, on the other hand, enabled it to pass through a period of contraction of business followed by the outbreak of war without undue anxiety. The profit fell from $309,229 to $296,659. The usual dividend of 7 per cent. was maintained, and sums totalling $120,608 allocated for various purposes.

The profits since 1905 have been as follows:—

Profits of the Quebec Bank.

The Queensland National Bank was incorporated in 1872. It acts as bankers to the Government of Queensland under an agreement extending to June 30, 1921, and also as bankers in Queensland to the Commonwealth of Australia. It suspended payment in 1893, but resumed business without reincorporation. A scheme of capital reorganisation, agreed upon in 1893, was substituted by a rearrangement in 1897. In November 1896 the liabilities exceeded the assets by £2,436,000. The Government agreed to accept for principal moneys and interest owing, amounting in all to £1,833,326, first, 15*s.* in the £, payable in five equal annual instalments, commencing July 1, 1917; and, secondly, a further 5*s.* in the £, payable out of the half-yearly profits of the Bank. The whole or any portion remaining outstanding on July 1921 becoming payable at that date. By an Act of 1904 the Government agreed to accept in payment of the sum of £1,463,660 owing by the Bank at June 30, 1904, 17 promissory notes of £86,098, carrying interest at $2\frac{5}{8}$ per cent. per annum. By December 31 last the amount of the promissory notes had been reduced to £198,293, there being only three notes remaining unpaid, due in 1919, 1920, and 1921. Under the scheme of 1897 holders of deposit receipts, etc., received 15*s.* of interminable inscribed deposit stock for every £1 of their holdings, the remaining 5*s.* being payable out of profits. The authorised capital is £1,000,000, in £5 shares, the subscribed amount being £800,000, of which there has been paid up £480,000. Of the balance of profits in each half-year, after paying interest on extended deposits, not less than 75 per cent. is placed to a special fund to be divided among the inscribed deposit stockholders until they have received the remaining 5*s.* due to them. No dividends on the capital will be paid until the 5*s.* has been paid to the Government and the deposit stockholders respectively, and no larger dividend than $3\frac{1}{2}$ per cent. will be paid until all moneys due to the Government have been repaid. The amount of the interminable inscribed deposit stock at June 30 last was £3,091,669. After payment of the moneys due to the Government this stock is redeemable in whole, or in part, upon six months' notice from the Bank at its market value, but not less than par, together with so much of the above mentioned 5*s.* as has not been previously paid. On September 30 last a repayment of 9*d.* in the £, written off the original deposit receipts, was distributed to the holders. At the meeting in February 1913 the Chairman stated that many inquiries had

been made from shareholders as to when the Board expects to be in a position to pay a dividend on the capital, and he said "I am therefore glad to say, without actually committing the Bank in any way, that, unless something unforeseen occurs, we hope, and believe, we shall be in a position to pay a dividend in about seven years. Of course, it is possible that business may improve, and that the time may be slightly shortened; and when we do pay a dividend we hope to be able to start at the rate of 10 per cent. per annum on the Bank's paid-up capital." Herewith we set out a statement of the liabilities and assets for various years from 1874.

The steadily growing prosperity of the institution may be seen from the growth in net profits. For 1904 the net profit was £43,644, which was distributed as to £19,644 to contingency account, £18,000 to private depositors' repayment fund, and £6,000 to the reserve fund. For 1914 the net profit was £100,194, and this was dealt with by carrying £76,194 to private depositors' repayment fund and £24,000 to reserve fund. The profit record since 1904 is appended:—

Profits of the Queensland National Bank, Limited.

Year ended Dec. 31	Gross Profits.	Salaries and other Expenses.	Net Profit.	Contingency Account.	Private Depositors' Repayment Fund.	Reserve Fund.

The Royal Bank of Australia, Limited, was incorporated on May 4, 1888, under "The Companies Statute, 1864" (an Act of the Victorian Legislature on the lines of the English Companies Act, 1862), with a paid-up capital of £300,000. The great "land boom" was at that time at its height, and when the reaction came, which culminated in the disastrous crisis of 1893, the depreciation of securities was so great that the great majority of the Australian banks (including all the banks with head offices in Melbourne, except the Royal) had to suspend payment. The Royal Bank had no difficulty in weathering the storm without assistance from any quarter, and it boldly faced the position created by the depreciation in securities by writing off £150,000 of capital as soon as an alteration in the law permitted it to do so. Since that date its progress has been rapid, as the figures show. The capital was increased in 1906 by £50,000; again in 1908 by £100,000, by the issue of fresh shares, the premium on which, amounting to £25,000, was placed to the reserve fund, which fund has also been steadily added to from profits until it now amounts to £240,000. While the progression has been continuous the management has proceeded with caution, opening branches only where justified by the business offering. The branches in operation at present are at Sydney, Bendigo, Ballarat, Footscray, Geelong, and London. In November 1907 the Bank acquired a share of the State Government account.

In 1900 the deposits were only £366,493, and it was not until 1906 that they first exceeded £1,000,000. The presence of the Government deposits first occurs in 1908, and they formed £40,434 out of a total of £1,272,533.

Since 1908 a very great growth has occurred in the deposits, and they are now nearly double the figure reached in 1907, amounting at March 31 last to £2,279,308. The bills in circulation at March 31 last amounted to £255,661, as compared with £58,602, while acceptances fell during the twelve months from £640,730 to £234,924. On the other side of the accounts the cash rose from £792,671 to £859,105, and bills and remittances from £377,677 to £421,251, while advances also rose from £1,590,682 to £1,655,421. Herewith we show the growth made by the Bank as evidenced in the liabilities and assets for various years from 1900.

During the 10 years from 1914 the Bank was able to record an increase in both gross and net profits year by year until for the year to March 31, 1914, a gross profit of £73,339 was secured, and a net profit of £45,706. It is not surprising that for the twelve months to March 1915 a slight recision has occurred, the gross profit amounting to £70,475 while the net profit was £39,496. The steady increase in profits was accompanied by a gradual rise in the dividend until for the twelve months to March 1913, the rate was raised to 8 per cent., at which figure it has since been maintained. The profit record since 1905 is appended:—

Profits of the Royal Bank of Australia, Limited.

Year ended March 31	Gross Profit. £	Salaries, Income Tax and other Expenses. £	Net Profit. £	Dividend. Amount. £	Dividend. Rate. %	Reserve, Invest., Deprn., &c. £	Carried Forward. £
1915 ...	70,475	30,979	39,496	24,000	8	15,000	7,661
1914 ...	73,339	27,633	45,706	24,000	8	20,000	7,165
1913 ...	70,702	25,186	45,516	24,000	8	20,000	5,459
1912 ...	65,571	22,620	42,951	22,500	7½	20,000	3,943
1911 ...	60,917	21,543	39,374	21,000	7	20,000	3,492
1910 ...	52,451	15,929	36,522	21,000	7	15,000	5,118
1909 ...	47,691	14,696	32,995	17,062	7	15,294	4,596
1908 ...	42,359	12,724	29,635	14,000	7	14,000	3,957
1907 ...	34,811	11,750	23,061	10,937	7	12,500	2,322
1906 ...	26,718	8,408	18,310	9,750	6½	10,000	2,698
1905 ...	23,247	7,579	15,668	9,000	6	5,000	4,138

The proportion that the shown net profit for the past year bears to the paid-up capital is 13.1 per cent., to capital and reserve combined 7.4 per cent., and to the working resources the proportion is 1.2 per cent.

Speaking at the meeting in March last the Chairman said: "Australia has probably suffered less from the War than most parts of the Empire, its world's trade being interrupted for only a brief interval, but naturally the volume of such trade has been somewhat reduced. Shipping costs have been greatly increased, and merchants have been severely handicapped by the scarcity of freight owing to the

* Exclusive of provision for bad and doubtful debts.

absorption of regular trading steamers by our Government and the removal of German vessels from the high seas. With these influences affecting our internal trade and the severe drought pressing upon our producers, some reduction in our profits was only to be expected, and I think you will agree with me that, in the circumstances, the Bank has done very well. We have met all the reasonable requirements of our customers, and at the same time have kept in hand very large cash reserves which are necessary in times like the present."

ROYAL BANK OF CANADA.

Head Office: Montreal, Canada.

Price of Share, $221¼. *Dividend,* 12 %. *Yield,* £5 8*s.* 5*d.* %.

The Royal Bank of Canada was incorporated in 1869, but it was in 1864 that the origin of the business took place, when a copartnership institution called the Merchants' Bank was established at Halifax. This institution obtained a charter of incorporation as a joint-stock institution to be called the Merchants' Bank of Halifax. The authorised capital of the new institution was $1,000,000, of which at first only $500,000 was offered for subscription. For the first quarter of a century the Bank's operations were confined to the Maritime Provinces.

It was in 1900 that steps were taken to change the name of the Bank. In that year the President said: "The expansion of our business throughout Canada and outside the Dominion is such that we believe the time has come when to meet our changed surroundings we should change our title and adopt a more comprehensive designation." It was felt also that the Bank was now more than a local or a provincial institution, and that it was rather national in its scope. Accordingly, on January 2, 1901, the name was changed to the Royal Bank of Canada. In 1902 a sale of 5,000 shares of the capital stock of the Bank at $250 per share was made, with the unanimous consent of the shareholders, to a number of prominent Americans, a connection which proved to be beneficial to the interests of the institution. In 1903 the Bank's business in Cuba was extended through the purchase of the assets of the Banco de Oriente at Santiago. In 1904 the assets of the Banco del Comercio, Havana, were purchased. In 1907 the Bank changed its headquarters from Halifax to Montreal. In 1910 another important step was taken by the purchase of the Union Bank of Halifax, an institution which had a paid-up capital of $1,500,000, a reserve fund of $1,250,000, and deposits of $10,889,290. The Union Bank had 35 branches at places where the Royal Bank was not represented.

A further important expansion occurred in June 1912, when it was decided to purchase the business of the Traders' Bank of Canada, and in the same month, partially to meet the cost of this purchase, the authorised capital was increased from $10,000,000 to $25,000,000. Nor was the Bank satisfied with this considerable step forward, but in addition it purchased the business of the Bank of British Honduras, which had a capital of $100,000, a surplus of $80,000, and deposits of approximately $400,000. In addition to the 100 branches acquired through the purchase of the Traders' Bank, not including 11 closed at points where the Royal Bank was already represented, and one branch in Belize through the acquisition of the Bank of British Honduras, no less than 28 additional offices were opened during the year. During 1913 the number of new offices opened was 39, and 4 were closed. The number now open is 405. It is very evident that an active policy of expansion is being carried out by the Royal Bank, both in the way of absorption of other institutions and also in opening additional branches. Comparing 1914 figures with 1913 it will be seen that no change has occurred in the paid-up capital or the reserve. The notes in circulation have risen from $13,176,635 to $13,505,255, while the deposits have fallen from $138,181,089 to $136,055,128. Acceptances have risen from $361,107 to $1,481,718. On the other side of the accounts the total cash has risen from $28,609,337 to $33,961,546, while call loans have fallen from $19,819,690 to $14,654,905. Investments also have dropped from $17,774,153 to $16,901,372, while loans and discounts have fallen from $105,294,658 to $103,394,479. Herewith we set out the liabilities and assets for various years from 1900.

Profits for the twelve months to November 30, 1914, amounted to $1,886,142, as compared with $2,142,100 for the previous year. The dividend, however, was maintained at 12 per cent., a rate that has been paid for each year since 1911, while $500,000 was written off for depreciation in investments and

* 11 months to Nov. 30.

The proportion that the shown net profits for last year bear to the paid-up capital is 16.3 per cent., to capital and reserve combined 15.0 per cent., and to total working resources 1.1 per cent.

At the meeting in January last Sir Herbert S. Holt, the President, ventured the prediction that the economic effect of the War will finally be beneficial for Canada. Should it be long continued the European nations involved may become financially prostrated for many years, and he added: "Even if the War is not long continued, the flow of capital from Great Britain to this country is not likely to be resumed for a considerable time, and new constructional work will, therefore, be retarded. On the other hand, we reap distinct commercial advantages from our geographical position and remoteness from the scene of warfare, which permit us to prosecute our farming and manufacturing industries unmolested in spite of our participation in the conflict. Britain is buying from us all the war supplies we can produce—many factories are working twenty-four hours a day—and we are securing for our crops and foodstuffs generally the highest prices in our experience. The importance of increasing our productive power is obvious. Only by so doing and by the exercise of rigid economy can we dispense temporarily with the aid of foreign capital. In the interval we must pay the formidable annual interest charge of approximately $140,000,000 on our foreign obligations. We cannot continue to add this amount to our indebtedness, and the only way we can meet it is by increasing exports and reducing imports to the barest necessities, in order to convert the customary adverse trade balance into a favourable one. As it is, we shall probably find that we have borrowed more than we can comfortably carry, especially as much of the money expended is yet unproductively employed. I believe, therefore, that a pause in our borrowings will not prove an unmixed evil."

The Royal Bank of Queensland, Limited, dates back to November 1885. It suffered during the crisis of 1893, suspending payment in May, but resumed business without re-registration in August 1893. The authorised capital is £1,425,000, the amount paid up being £545,659. There are two classes of shares, viz., 7,080 Preference shares of £10 each, fully paid, and 69,999 Ordinary shares of £9 each, with an uncalled liability of £2 10*s.* per share. In respect of this uncalled liability a sum of £18,511 has been prepaid. The business done by the Bank is of a comparatively small character, the deposits totalling £1,526,359 at March 31 last. In the statement herewith we set out the liabilities and assets for various years since 1893.

For the year to September 30, 1914, the gross profit amounted to £116,269, as compared with £109,904 for the previous year. After providing for expenses the net profit amounted to £31,476, as compared with £29,020. This permitted of a payment of a dividend of 5½ per cent. on both Preference and Ordinary shares, as compared with 5 per cent. on each class for the previous year.

It may be added that the Preference shares are entitled to a cumulative dividend of 3½ per cent. and to participate *pari passu* with the Ordinary shares in surplus profits remaining after paying a non-cumulative dividend at the same rate on the latter. They are also entitled to priority to capital, with further participation after paying the other shares.

Of late much greater attention has been paid to the question of the investment of British capital in Russia and Russian enterprises. Up to the past few years the British merchant has refused to adapt himself to the financial conditions prevailing in Russia, which may be summed up in the one phrase of "long credit," but with the establishment of a more friendly political feeling between the two countries steps have been taken in various quarters to bring about a greater participation in Russian trade by Great Britain. Until the early part of 1911 there was no English bank in Petrograd, when Messrs. Boulton Brothers and Company, merchants and private bankers of

London, opened a branch in the Russian capital. Subsequently the firm obtained a valuable charter from the Russian Imperial Government for the creation of a joint-stock bank, this being only the second charter granted for such a purpose during the last 40 years. The Bank was founded with a capital of Rbls. 5,000,000 (£528,541), in 20,000 fully-paid shares, Rbls. 250 each. Of this amount Rbls. 2,264,000 were subscribed in Russia, the remainder of the shares being subscribed in Great Britain by the Imperial and Foreign Corporation, Limited, which was established partly for this purpose, as well as to carry on general financial business which lies outside the ordinary scope of banking. The head office is at Petrograd, and it is proposed to establish agencies throughout Russia in all the principal centres of trade, so as to be in a position to afford information to British manufacturers and merchants and give financial facilities otherwise unobtainable. In a statement issued by the Bank occurs the following: "In Russia, as in all undeveloped countries, banking cannot be conducted on the hard-drawn lines which govern finance in older countries of long development. There must be some elasticity in business methods. The condition of Russia to-day requires a commercial adaptability analogous to that which prevailed in Britain during the eighteenth century, when a man (or firm) was at once merchant and banker, accepting deposits from customers and paying interest for their use in his business. Many of the leading banks in England to-day are the outcome of private mercantile businesses, and, in turn, many of the leading industrial firms whose names are now household words owe their original establishment to the timely and personal assistance of a private banker. The personal element in banking—*i.e.* the banker's private knowledge and judgment of his client and of the potentialities of his business (the absence of which has become rather a marked feature of modern British joint-stock banks)—is essential in Russia to the encouragement of trade, as well as to the success of any banking concern in that country."

The first accounts showed that at the end of 1912 the Bank had accumulated deposits to a total of Rbls. 10,069,744. On the other side, the discounts, loans and advances amounted to Rbls. 12,282,548, the total assets being valued at Rbls. 16,036,477. In February 1913 it was decided to make a second issue of shares of Rbls. 5,000,000. The issue price was fixed at Rbls. 272, of which Rbls. 250 have been added to the capital, Rbls. 20 to the reserve capital, the balance of Rbls. 2 being used in connection with the expenses of issue. Consequently, the issued capital was raised to Rbls. 10,000,000 and the reserve account to Rbls. 823,250.

At the end of 1914, while the issued capital remained unchanged, the reserve fund was increased to Rbls. 1,477,440. The deposits doubled in amount, rising from Rbls. 11,091,724 to Rbls. 22,767,887. Similarly the acceptances rose from Rbls. 250,754 to Rbls. 575,110. On the other side of the accounts, the cash fell from Rbls. 4,258,935 to Rbls. 3,721,856, but investments rose from Rbls. 2,766,841 to Rbls. 4,336,840, and bills discounted, &c., from Rbls. 10,657,239 to Rbls. 13,113,383. Herewith we set out the liabilities and assets of the Bank for the three years that it has been in existence.

For the period from November 15, 1911, to December 31, 1912, a gross profit of Rbls. 1,124,871 was secured. After deduction of expenses, &c., there was a balance of Rbls. 723,667, a dividend of 6 per cent. was paid, and of the balance Rbls. 400,000 was carried to reserve. For the year 1912 the gross profit rose to Rbls. 1,319,462. After deduction of expenses, &c., there was a balance of Rbls, 861,931, an increase of nearly Rbls. 140,000 over the previous period. The dividend was increased to 7 per cent., and a total of Rbls. 412,750 carried to reserve, of which Rbls. 212,750 went to reserve capital and Rbls. 200.000 to reserve dividend.

For 1914 the gross profit rose to Rbls. 1,836,096, while after providing for expenses a net profit was shown of Rbls. 996,090. The dividend, however, was reduced to 6 per cent., and a balance of Rbls. 400,000 carried to reserve, one-half as a reserve for possible losses and the other half to reserve capital.

Herewith we set out the profits and the manner of their distribution for each year:—

	Dec. 31, 1914. Roubles	Dec. 31, 1913. Roubles	Dec. 31, 1912. Roubles

Carried forward	16,738	20,648	23,667

* For period from November 15, 1911.

The proportion that the net profit for the past year bears to the paid-up capital is 9.9 per cent., to capital and reserve combined 8.6 per cent., and to the total working resources 2.4 per cent.

During the first half of 1914, as in 1913, the Bank took an active part in placing new issues both on the Petrograd and London Stock Exchanges. Authority has been obtained to open branches in Petrograd, Moscow, London, Kiev, Kharkov, Ekaterinburg, and such other places as may be found suitable.

STANDARD BANK OF SOUTH AFRICA, LIMITED.

Subscribed, 309,705 Shares, £20 each ...	6,194,100
Paid up, £5 per Share	1,548,525

Price of Share, £10⅛xd. *Dividend*, 14%. *Yield*, £6 15*s.*%.

THE premier banking institution of South Africa is the Standard Bank of South Africa, Limited, which was established in 1862, nine years after the granting of representative institutions to the colony and 10

years before the introduction of responsible government. In the prospectus of the Bank attention was drawn to the fact that the banking capital of the colonies had not kept pace with the increase of trade, and that "it has become clear that a new banking institution of considerable magnitude and with adequate resources is now of public necessity and must command success." The capital of the new Bank was fixed at £1,000,000, in 10,000 shares of £100 each, with power to increase to £2,000,000. The first issue consisted of 5,000 shares. It may be added that the title was originally the Standard Bank of British South Africa, and it was not until January 1883 that the name was changed to its present form. The first report issued was dated October 2, 1863, and contained the results of the first half-year's working. This enabled a dividend of 6*s.* 9*d.* per share to be paid, which was equal to 12 per cent. on the paid-up capital. Moreover, a start was made with a reserve fund, £10,000 being so set aside, though the whole of this did not come from profits, being partly received as premium on the issue of the shares. In their report the directors stated "that the most complete success has crowned our efforts and the prospects of the future are most encouraging." Quite early in the history evidence was afforded of the intention of the board to thoroughly cover the field of operations, and by the time that the Bank had been in operation twelve months as many as 17 branches were in operation in South Africa. Moreover, it was evident that business was steadily increasing, for it was decided to increase the capital by the issue of one new share for every two held, and the issue was made at a premium of £8 per share. By 1864 the Bank had 20 branches, of which 2 were in Natal and 3 in the Orange Free State. Soon after this the business of the Commercial Bank of Elizabeth was acquired, and also that of the Colesberg Bank. In 1880 the number of branches amounted to 50. By 1892 the number of branches had increased to 72, and by December 31, 1914, the number reached 220. Of this number 125 were in the Cape Province, 16 were in Natal, 17 in the Orange Free State, 38 in the Transvaal, 1 in Basutoland, 16 in Rhodesia, 1 in the Nyassaland Protectorate, 3 in British East Africa, 1 in Uganda, and 2 in Portuguese East Africa. In addition to which there was the head office in London, and there is an agency in Hamburg and another in New York.

The capital of the Bank was increased in 1862 to £2,000,000; in the following year a further increase occurred to £3,000,000, while in 1873, by the acquisition of the London and South African Bank, the paid-up capital rose to £600,000. By 1880 the amount paid up was £1,000,000, and by 1905 it had increased to £1,548,525, at which figure it still remains. The present authorised capital is £6,250,000, and at December 31 last the subscribed capital amounted to 309,705 shares of £20 each, making £6,194,100, and as £5 per share was called up this made the paid-up capital, as stated, £1,548,525.

In 1870 the reserve fund amounted to £6,000, in 1874 it was £100,000, and in 1880 it was £503,994. In 1884 a transfer of £130,000 was made from reserve to contingent fund, but this was soon made good, and by 1899 the reserve touched £550,000. A rapid increase has occurred since that date, and at December 31 last the reserve totalled £2,000,000, in spite of the fact that in 1907 a transfer of £97,050 was made from the reserve fund to investment reserve account to cover depreciation in the price of investments and provide a margin beyond their market value. It will be seen that the reserve is £451,475 in excess of the paid-up capital. In June 1863 the deposits were only £114,154, at the end of the following year they exceeded £472,000, by 1870 they were in excess of £500,000. By the end of 1914 they had further risen to £21,821,853.

Other changes in the accounts at the end of 1914 are comparatively small in amount. Drafts outstanding and acceptances have fallen from £1,262,958 to £1,036,313. On the other side of the accounts, bills discounted and advances have fallen from £17,699,979 to £16,549,959. The cash has risen from £6,153,144 to £7,690,135. The increase is mainly due to a rise in the amount of cash at short notice, as the lending of money in London at short notice affords a convenient means of employing funds when general business is slack.

Investments have risen from £2,650,242 to £2,949,131, due to the Bank being able to employ profitably a portion of its resources in the purchase of War Loan, Exchequer bonds, and Treasury bills. Herewith we set out a summary of the liabilities and assets of the Bank for various years since 1863.

Naturally the profit statement of the Bank reflects fluctuations in trade in South Africa, but it may be pointed out that, in spite of the very severe depression which occurred in 1908 and 1909, it was not necessary to reduce the dividend below 10 per cent.

Naturally war conditions have proved unfavourable. The production of diamonds has practically

* June 30.

ceased in South Africa, ostrich feathers have fallen largely in price, and the wool trade is depressed. Agricultural operations were also interfered with by the outbreak in South Africa, and heavy military expenditure fell on the Government of the Union. A further effect of the War was to bring about the practical closure of the Bank's agencies at Hamburg. Nevertheless the gross profit rose from £920,012 to £935,431, but by reason of the greater proportionate rise in expenses the net profit fell from £338,648 to £315,142. It was possible, however, to maintain the dividend at 14 per cent., while a sum of £30,000 was set aside to write down investments to cover the depreciation in the value, so far as can be ascertained, at December 31, 1914.

Herewith we set out the profits since 1904:—

Profits of the Standard Bank of South Africa.

Year ended Dec. 31	Gross Profits. £	Salaries and other Expenses. £	Net Profit. £	Dividend Amt. £	Dividend Rate. %	Reserve, &c. £	Carried Forward. £

* Tax free]1st half.

The proportion that the shown net profit for 1914 bears to the paid-up capital is 20.4 per cent., to capital and reserve combined 8.9 per cent., and to the total working resources 1.0 per cent.

Speaking to the shareholders on April 21 last, Sir David Barbour, K.C.S.I., K.C.M.G., pointed out that the diamond and ostrich feather industries had been affected in the earlier portion of 1913 by the approach of one of those general depressions which are periodically experienced, and he added: "Diamonds and ostrich feathers are luxuries, and luxuries are always affected in a special degree by periods of depression. The War has practically put a stop to the production of diamonds for the time being, and is checking the production of ostrich feathers. The gold-mining industry is one that is fairly independent of the War, but the strike in January 1914 has led to a reduction in the year's production of the Transvaal of £1,770,000 as compared with the previous year. A hopeful sign is that the cost of production was reduced by 10*d.* in the ton. It may seem a small amount, but its importance will be recognised when it is borne in mind that the total number of tons crushed was 26,369,946. Twenty six millions of tenpences amount to a large sum, and every reduction in the cost per ton renders it more profitable to deal with low-grade ores, and will greatly prolong the life of the gold-mining industry on the Rand. The production of gold in Rhodesia showed a large increase from £2,902,268 in 1913 to £3,580,208 in 1914. Industries other than the production of diamonds and ostrich feathers have been affected in a minor degree by the War, but apart from the War prospects are generally good. Drought was experienced in the first six months of the year, and the effects of seasons of drought were specially severe in the Orange Free State and parts of the Transvaal and Rhodesia. It is to be regretted that the local outbreak prevented full advantage being taken of the rains which were experienced when the drought broke up."

The balance-sheet figures as at June 30, 1915, show a substantial growth as compared with those of the previous year. The capital and reserve are unchanged, but the notes in circulation have risen from £1,069,233 to £1,221,080. Deposits, however, have risen from £21,560,485 to £24,761,230, an increase of no less than £3,200,751. On the other side of the accounts the cash has increased £1,848,026, amounting to £9,180,073, as compared with £7,332,047. Investments also have risen from £2,643,335 to £3,132,031, and bills discounted, advances, &c., have risen from £16,703,295 to £17,584,821.

UNION BANK OF AUSTRALIA, LIMITED.

Head Office: 71 Cornhill, London, E.C.

Paid up, £25 per Share	2,000,000

Price of Share, £49. *Dividend*, 14%. *Yield*, £7 5s. 8d.%.

The prospectus of the Union Bank of Australia was dated September 1, 1837, when the Bank was formed with a capital of £500,000, in 20,000 shares of £25 each. The prospectus stated that "in the establishment of a bank of issue and deposit under the above title the directors are chiefly impressed with a conviction of the importance of meeting the increased demand for capital in the Australian colonies, and are desirous in the establishment of their banks in New South Wales, Van Diemen's Land, and other Australasian settlements to identify to the utmost of their power the interests of the colonists with their own. The directors are fully persuaded that in no part of the world can capital be more advantageously or securely employed than in Australasia, where the bank interest is 8 per cent. and the current rate considerably higher." In 1838 the Tamar Bank, in Van Diemen's Land, was taken over, and within two years the Bank was established in four colonies. By 1844 the paid-up capital amounted to £820,000, at which it remained until 1857; by 1859 it had risen to £1,000,000, and by 1864 to £1,250,000, at which figure it remained until 1877, when a further issue of shares was made at £33 premium, which brought the capital paid up to £1,500,000, at which figure it remained until July 1913, when it was decided to issue 20,000 shares, £25 paid, at the price of £45 per share, existing shareholders being allotted one new share for every three shares held. By 1852 the Bank had accumulated a reserve fund of £200,000, and by 1864, in consequence largely of the increased capital, the reserve was increased to £400,000. The subsequent increase of capital in 1878 brought up the reserve to £816,500, and subsequent additions brought it up to £1,000,000 in 1889, at which figure it stood until 1896. It then dropped to £750,000, since when additions have been made year by year, until at the present time it amounts to £1,960,000.

The Union Bank of Australia is one of the few institutions that passed satisfactorily through the financial crisis in 1893, though it is not surprising that it suffered a fall in its deposits. In February 1893 they amounted to £18,118,495; by 1894 they had fallen to £16,930,110, and by 1899 they had fallen to £14,800,000. A recovery then occurred, and by 1906 the high-water mark of 1893 was passed, the deposits at February 28, 1906, reaching a total of £18,683,000.

Since 1910 the deposits have shown practically uninterrupted growth, and in February 1915 they reached the high-water mark of £23,594,898, as compared with £23,538,534 in February 1914. On the other side of the accounts cash and advances rose from £4,953,179 to £5,500,872, but call money fell from £1,805,000 to £500,000. Investments, however, rose from £2,020,433 to £2,507,759. Bills discounted also rose from £16,306,479 to £17,704,216. We set out herewith the liabilities and assets of the Bank for various years from 1860.

It may be added that in 1892 the Union Bank of Australia took over the Bank of South Australia.

The growing prosperity of Australia during recent years is amply reflected in the profit statement of the Union Bank of Australia. The most prosperous year secured by the Bank was that ended February 1907, when the gross profits reached £689,489, and the net profits were £410,155.

For the year to February 1914 the gross profit was £700,978, while the net profit was £306,507. For the twelve months to February 1915 the gross profit further rose to £709,338. The expenses, however, increased at a greater rate, and, consequently, the net profit amounted to £305,000.

For 1892 the Bank paid a dividend of 12 per cent., for 1893 the rate was 10 per cent., while for 1894 it fell to 5 per cent. It remained at this figure for three years, and since then progress has been steadily upwards. Thus for 1899 the rate was 5½ per cent.; for 1900 it rose to 6 per cent.; for 1901 to 7½ per cent.; for 1902 to 8 per cent.; for 1904 to 10 per cent.; for 1907 to 14 per cent., at which rate it has since remained. At the same time substantial sums have been added to reserve, &c., as may be seen from the following statement giving the profit record since 1905.

* June 30. † Includes inscribed stock deposits.

The proportion that the shown net profit for the past twelve months bears to the paid-up capital is 15.2 per cent., to capital and reserve combined 7.7 per cent., and to the total working resources 1.0 per cent.

Naturally the War has been an important factor in the large decrease in exports of the Commonwealth; as, for example, the disorganisation of the metal business, the difficulty at one time of obtaining freight room, the holding back of wool, and in other ways, and as the Chairman pointed out in July last, "The War had also affected the general trade of the Commonwealth, which, though sound on the whole, had been dull in most directions. But whatever effect the War had had the immediately important factor during the half year was the severe drought, from which practically all the States in the Commonwealth suffered, many localities experiencing the worst drought, for the time being, of which there were records. New Zealand also had an unusually dry season in certain districts. The wheat harvest in the Commonwealth was a failure, and importation of wheat had become necessary. There had also been heavy losses in stock, and lambing in many parts had been poor. Some estimates put the loss of sheep at 10,000,000 since December 1914. It was not possible to state with any accuracy the result of the wool clip. The export was stated to be 391,000 bales less than in the previous year, owing to some extent of freight difficulties, but there was no doubt that some portion of the above amount was still in store in various parts; it was probable that the actual shortage might be from 200,000 to 250,000 bales and a further serious diminution must be looked for next year. The dairying industry, too, which showed very satisfactory expansion, had also temporarily suffered from the want of rain. That was rather the dark side of the picture. On the other side, it was satisfactory to be able to state that the prices obtained for the wool had been good, and went some way to compensate for the reduced quantity. But the most encouraging feature had been the fine rains which had recently fallen throughout all the States, except parts of Queensland, where rain was still wanted. The rains, unfortunately, came too late to materially help the pastoralists, but entirely altered the prospects for the agriculturists, and it might fairly be said that these latter started the season under most favourable conditions."

The Union Bank of Canada was established in 1865 under the title of the Union Bank of Lower Canada, the name being changed to its present form in 1886. Originally the head office was in Quebec, but in July 1912 it was removed from Quebec to Winnipeg. The chief growth of the institution is largely due to the development of the West, and it is on account of this that the change of headquarters has been made. At the meeting in November 1912, the President pointed out that the Union Bank was the first Bank to establish a chain of branches in the West, and as railways and population spread westward the Bank followed. The Union Bank of Canada was the first to appoint a board of Western directors. During the twelve months to November 30, 1912, the Bank opened no less than 43 new offices, a forward step which was taken after careful consideration and a close examination of local conditions. As the President remarked, "One not conversant with Western life would find it difficult to realise the change made each year in a few months by the incoming thousands of new settlers. Vast areas of vacant land are brought under cultivation, new lines of railway are built, divisional towns established, and villages with stores and hotels spring up with magical rapidity. To these communities a bank is essential, and one of the chief merits of our Canadian banking system is that it lends itself to the prompt establishment and equipment of branches whenever they are required." During 1913 a further 31 offices were opened, while 3 were closed. In 1914 the Bank opened 13 new offices and closed 4, bringing the total number up to 328. In 1904 the Bank had a paid-up capital of $2,500,000, a reserve fund of $1,000,000, and total assets amounting to $20,602,110. By November 1912 the paid-up capital had increased to

* May 31.

$5,000,000, the reserve fund to $3,300,000, and the total assets to $69,408,228; so that in eight years the capital was doubled, the reserve fund trebled, and the total assets nearly quadrupled.

At November 30, 1914, while the paid-up capital remained unchanged at $5,000,000, the reserve fund was $3,400,000, while the total deposits amounted to $63,463,284. Herewith we set out the liabilities and assets for various years from 1901.

The profit for the 12 months to November 1914 amounted to $712,440 as compared with $750,095 for the previous year. The dividend, however, was maintained at 9 per cent., and a sum of $215,000 written off for depreciation in securities. The carry-forward was increased from $90,579 to $103,019. The profit record since 1905 is as follows:—

Profits of the Union Bank of Canada.

Year ending Nov.	Profit.	Dividends. Amt.	% of Total.	Premium on New Stock.	Reserve.	Carried Forward.

* Six months to Nov. 30. † Year ended May 31.

The proportion that the shown net profit for 1914 bears to the paid-up capital is 14.2 per cent., to capital and rest combined 8.5 per cent., and to the total working resources, amounting to $81,561,850, .9 per cent.

The President, Mr. John Galt, warned the shareholders that Canada must look for decreased activities whether the War continues or not, and that the deposits of the Bank must shrink as indebtedness is paid, though the large purchases of war material in Canada will offset this to some extent. Canada cannot expect to receive outside capital from Europe, and it must, therefore, rely upon its own resources. "Vast sums have been spent in the development of this country, and in affording facilities for handling its products. Our wheat, cattle, lumber, fish, all the wonderful resources of Canada are needed by the world. The hour for Canada has struck, and now is the time for us to show what we can do. Our first duty is to defend the Empire; our next to devote all our energies to replace the wastage of war by increased production, and it is to our farmers chiefly that we must look for this. A splendid beginning has been made in the great increase of land ready for crop, which is estimated at about 20 per cent. Farmers should be urged and helped to conserve their breeding

Deposit Accounts opened and American Securities purchased and sold for clients.

stock and to improve their methods. Every possible encouragement should be given to farmers to go in for mixed farming. The results achieved in certain districts—notably between Calgary and Edmonton—are well known to bankers and loaning companies, and if the same policy is followed throughout our country it will soon be reflected in bank deposits and general prosperity. Our banks fully recognise this, and will do everything in their power to aid the production of real wealth. Though there is little hope of our being able to get funds in Europe for a considerable time, there seems good reason to believe that abundance of capital will be available in the United States, and no opportunity should be lost of bringing to the notice of investors there the magnificent field for investment which is offered by Canada at the present time."

Price of Share, £27½. *Dividend* 20%. *Yield*, £7 5*s.* 5*d.*%

THE Western Australian Bank was established by a deed of settlement on June 23, 1841, with a capital of £20,000, in 2,000 shares of £10 each. The first accounts issued showed that at the end of 1841 the paid-up capital was £2,481, and that the business was sufficiently profitable to warrant the payment of a dividend of 15 per cent. The capital has been steadily increased since that date, the last increase taking place in 1912, when the paid-up amount was brought up to £250,000. The growth of the reserve fund is of a remarkable character, and in September last it amounted to as much as £680,000, or not very far short of three times the amount of the paid-up capital. In 1869 the deposits not bearing interest amounted to £42,659, while those bearing interest stood at £30,176, or a total of £72,835. By 1895 the deposits reached a total of £887,041. It was in 1906 that the deposits first exceeded £2,000,000. The highest figure recorded is in 1911, when they reached £2,994,181, of which £1,467,481 represents non-interest bearing and £1,526,700 interest-bearing deposits.

Since 1911 the deposits have shown a slight falling off, and in March last they amounted to £2,486,231, as compared with £2,622,037 in the previous year. Herewith we set out a statement of the liabilities and assets for various years from 1895.

The most prosperous year experienced by the Bank was that for the twelve months to March 1913, when the net profit amounted to £73,892. For the following year the net profit was £68,559, while for the twelve months to March 1915 it was £57,444. In 1906 the dividend was increased from 17½ per cent. to 20 per cent., a rate which has been maintained for each year since that time.

Herewith we set out the profit record since 1904:—

* Free of dividend tax.

The proportion that the shown net profit bears to the paid-up capital is 22.9 per cent., to capital and reserve combined 6.2 per cent., and to the total working resources 1.6 per cent.

At the meeting in May last the Chairman congratulated the shareholders on the break-up of the drought in the North-west and on the prospects that the pastoralists would have a good season. Similarly, further south, in the more populous district, splendid rains had fallen, and there was every appearance of a good season. Apart from the War and the partial cessation of the timber industry of Western Australia through the closing down of the mills, the outlook appeared to be good.

It may be added that the Bank came through the financial troubles in Australia unscathed, and since the establishment of the institution it has regularly paid dividends to its shareholders, and, as will be gathered by what has already been stated, on several occasions, especially during the earlier part of its history, very substantial bonuses have been forthcoming.

THIS institution was formed in 1864, when economic and financial conditions in Austria were extremely unsatisfactory. At that time the Government debt was on a 7 per cent. basis, and the currency was at a heavy discount. In the work of increasing the productivity of the country, of restoring the finances of the State to order, of reforming the currency, and of restoring the exchange to par the institution largely contributed. In order to attract funds from a public unaccustomed to banking it borrowed on mortgage on the one hand and lent on mortgage on the other. Its mortgages were of various descriptions. Some were just mortgages secured upon house property, land, and buildings. Others were mortgages secured on communes. Others, again, were mortgages secured upon State lands, and in recent years it has issued mortgages secured on industrial establishments. These mortgage bonds became very popular, and in a few years a large number were sold. Beyond its mortgage business the institution also obtained a large amount of deposits on current account. The panic of 1873, however, caused a run upon it by depositors, and the institution would have come to grief but for the assistance of the Government. The heavy losses it then suffered compelled it to adopt an extremely conservative policy for many years, and not until about the year 1890 did its deposits recover to the level they touched in the early seventies. In large part through the ability and hard work of Dr. von Taussig it eventually recovered the whole of its losses. The work of readjustment called for the suspension of the dividends from 1873 to 1877. Since 1880 the institution has made steady progress. It was not, however, until the year 1905 that its business began to show great expansion. In that year it took advantage for the first time of an alteration in its statutes that had been made in 1899, giving it power to control industrial institutions after the manner that industries in Germany are controlled by German bankers. By means of this power the institution has provided large sums of money for the expansion of Austrian industry, and its business has grown more rapidly than it ever grew before. It now controls many of the most important industrial institutions of Austria, to which it has supplied a large amount of capital. The recent policy of the institution in providing new capital for industrial establishments is to be ascribed to the present Governor, Dr. Rudolf Sieghart.

The B.C.A., as it is termed, commenced business with the modest capital of 9,600,000 kronen, or £400,000, which was increased in 1870 to 19,200,000 kronen, at which it remained until 1900. In that year it was increased to 24,000,000 kronen by the appropriation of 4,800,000 kronen from the reserve fund. In 1906 the capital was further increased to 45,000,000 kronen by the appropriation of 12,000,000 kronen from the reserve fund and by the issue of 9,000,000 kronen in 30,000 new shares of 300 kronen each. In 1912 the capital was further increased to 54,000,000 kronen. The reserve fund in the early days was rapidly increased, until in 1873 it reached 12,956,000 kronen, but in consequence of the losses incurred in the *Krach* the reserve was reduced to 970,000 kronen in 1875. From that figure it was steadily increased to 55,000,000 kronen in 1899. Notwithstanding the transfer from reserve to capital, the reserve fund at the end of 1914 was 122,454,000 kronen. The proposed issue of shares in 1914 was not made.

With the exception of the period from 1873 to 1878, when the Company was liquidating its losses after the 1873 crisis, the institution has always earned substantial profits and paid handsome dividends. In the first

year of its operations its dividend was at the rate of 13¾ per cent., and in 1872 it had risen to 26¼ per cent. In 1878 the dividends were restarted with a 5 per cent. distribution, and by 1881 had been increased to 13¾ per cent. On four subsequent occasions in the eighties the dividends dropped to 12½ per cent., but since then they have steadily risen, until in 1905 a dividend of 21 per cent. was paid. In consequence of the new issue of capital and the appropriation of reserve to capital in 1906 the dividend had to be reduced to 14⅔ per cent., but in 1913 it again rose to 20 per cent., notwithstanding the increased capital. Owing mainly to increased expenses in 1914, the profit for that year declined substantially, and the dividend had to be reduced to 17 per cent. The profits in recent years are shown by the following statement:—

Profits of Allgemeine Oest. Boden Credit-Anstalt.

Year to Dec. 31	Gross Profit. Kronen.	Expenses. Kronen.	Net Profit. Kronen.	Dividend—Amount. Kronen.	Dividend—Rate. %	Special Allocat'ns. Kronen.	Carried Forward. Kronen.

In consequence of the outbreak of war, and the great Governmental expenditures, combined with the demand for credit, the business of the Bank has shown great expansion. At the end of 1913 its current accounts were 291,000,000 kronen, and at the end of 1914 they had risen to 464,000,000 kronen, while the total funds at its disposal rose from 920,000,000 kronen to 1,126,000,000 kronen. The Bank has employed its funds mainly in advances on current accounts, which rose from 312,000,000 kronen to 404,000,000 kronen. The great expansion in the liabilities and assets of the Bank in 1914 in consequence of the War will be obvious from the statement of liabilities and assets herewith.

ANGLO-AUSTRIAN BANK.

Head Office: Vienna.

London Office: 31 Lombard Street, E.C.

Capital—

Authorised £5,000,000

Issued in 1914, 416,667 Shares of Kr.240 each 4,166,670

Price per Share, Kr.327. *Div.*, 1914, 6¼%. *Yield*, 4·6%

The Anglo-Austrian Bank was established in 1863 and ranks as the oldest purely foreign banking establishment in London, the London office being opened simultaneously with the head office at Vienna. During the present War the London office has been placed under the supervision and control of Sir William Plender, acting for the British Treasury, and Mr. Edward Dexter has been appointed special supervisor. It was founded to act as a clearing-house for the payments made by Austrian manufacturers importing raw material from England and British possessions, and also to facilitate the distribution of produce and manufactured articles between the two countries. In addition it assists in the development of industry in Austria-Hungary doing a regular Continental banking business. It also carries through important financial transactions. For example, in 1912 the Bank took part in the formation of no less than 14 Austro-Hungarian limited companies, and before the War it was represented on the boards of 35 companies, mostly industrial, but including other banks, such as the Banca Commerciale Italiana, the Banque Internationale de Bruxelles, Banque Commerciale Roumaine, Banque de Salonique, &c. Altogether the Bank had 21 offices in Vienna and 30 in other parts of Austria-Hungary, in addition to the London office. The first balance sheet showed that the paid-up capital was £600,000, the deposits and note circulation amounting to £758,042; by 1870 the paid-up capital had increased to £1,400,000; by 1880 to £1,500,000, and by 1900 to £2,000,000; in 1906 it was raised to £2,500,000, and in 1910 to £3,333,340. In 1911 it was further increased to £4,166,670, while at the general meeting, in April 1914, the directors were authorised to increase

the capital to £5,000,000, leaving the council to fix the date of and the conditions under which the new shares were to be offered. This growth in paid-up capital was accompanied by a steady and unbroken increase in the reserve fund. By 1870 the reserve amounted to £126,313, and by 1900 to £358,437; by 1910 it had practically doubled, reaching a total of £701,982, while at December 31, 1914, it had been brought up to £1,446,205. The growth is still better shown in the rise in the deposits. It was not until 1901 that they first exceeded £5,000,000, while by 1908 they had risen to £10,040,489; at December 31, 1913, they amounted to £20,785,714, and in 1914 they jumped to £25,071,186. In the statement below we set out the liabilities and assets for various years since the formation of the Bank.

In consequence of the War the acceptance business of the Bank has been almost entirely destroyed, and whereas at the end of 1913 the bills payable were £4,671,000, at the end of last year they were only £977,000. Most of these bills were payable in London. Against the decline in bills payable must be placed an expansion of over £4,000,000 in deposits, so that the total funds at the disposal of the Bank at the end of last year were rather greater than at the end of the previous year. It will be seen from the statement of assets herewith that the Bank has strengthened its cash position. In consequence of the War the directors decided to reduce its dividends in 1914 from 8½ per cent. to 6¼ per cent., and to allocate to special purposes £229,000 instead of £125,000. The maintenance of the profit and the decline in dividend last year are shown below:—

BANCA COMMERCIALE ITALIANA.

Head Office: Milan.

London Branch: 1 Old Broad Street, E.C.

Capital—
Subscribed and fully paid, consisting of 272,000 Shares of L. 500 and 8,000 of L. 2,500 ... Lire 156,000,000
Price of L.500 *Shares*, L.545. *Dividend*, 6%. *Yield*, 5·5%.

THE growth of this Bank is one of the noteworthy events of modern banking. Formed only in October 1894, it has in less than 20 years built up a great business, its deposit and current accounts at the end of December 1913 amounting to nearly £32,000,000. Its growth has, indeed, been so rapid that fresh issues of capital are constantly necessary to take care of its growing business. Originally the capital was only Lire 20,000,000, or £800,000; while at the end of 1914 the share capital was Lire 156,000,000, or £6,240,000. In the remarkable progress of Italy in the last 20 years this Bank has taken a leading part. Indeed, its activities have in a large measure contributed to the manufacturing and commercial development of Italy which is raising the country from a condition of poverty to comparative affluence. At the time the new Bank was formed Italy was more or less dependent upon foreign countries for supplies of new capital. In the last 20 years Italy has redeemed a large part of her debt previously held abroad, and has now become self-sustaining in the matter of capital. The growth of the Bank has been in some measure due to the assistance it has received from both French and German bankers. Upon its board are representatives of German, French, Austrian and Swiss banking institutions. Its financial policy has been a conservative one, and in less than 20 years it has built up a reserve fund of nearly Lire 60,000,000. The Bank has 62 branches, situated in every part of Italy. The progress of this institution may be regarded as indicative of the general progress of Italy.

The following extract from the Bank's report for 1914 describes how banking in Italy was affected by the outbreak of war:—

The regular and encouraging progress of affairs was unexpectedly interrupted by the sudden rupture of the peace of Europe, which immediately plunged the whole world into an economic crisis of a most serious and complex nature.

International relations, both commercial and financial, were practically paralysed. During the last days of July the principal Money markets of the world were greatly excited and eventually closed. All the belligerent countries resorted to special financial measures, each one in its turn proclaiming a Moratorium, and the majority of the neutral States immediately followed suit. Discount rates rose rapidly in all the leading financial centres, reaching 6% in Paris and Berlin and 8% in Vienna, and at one time touching even 10% in London. Dealings in the foreign exchanges became extremely difficult, owing to disorganised communications and the uncertainty of the Foreign Exchange market. Rates

continued to fluctuate considerably for some time, eventually reaching a point of disparity, to our detriment, unknown for many years, particularly as regards France, England, and Switzerland. In the cases of Germany and Austria, however, rates moved in our favour.

The pressure which events brought to bear on industry, commerce, and banking in Italy is too well known to require discussion.

Thanks to a very clear and sagacious conception of the state of affairs and to the united efforts to efficiently meet the requirements of the situation, as well as the precautionary steps taken to protect our national economy, the panic which also swept over Italy during the early stages of the crisis was rapidly rendered less acute. Nevertheless, a feeling of uneasiness and disquietude was always more or less evident, and there remained, although in a lesser degree, a tendency to hoard. This disturbed the circulation, made the conditions of credit more difficult, and hampered the normal expansion of a considerable amount of productive energy.

As far as could be judged from the open market, in the absence of public dealings, industrial shares were particularly affected, many falling far below their intrinsic value. Government bonds were influenced not only by international disturbances, but also by public conjecture as to the probability of new internal issues. Thus, for instance, our 3½% Consolidated stock, which, during the first seven months of 1914, stood at an average price of 96.97%, gradually declined until finally, at the end of December, it hovered round about 86%.

It is important, and at the same time comforting, to note that nowithstanding the unforeseen difficulties and exceptionally critical conditions, and the general economic reaction brought about by the War, which surprised us at a moment when we were emerging from an unfavourable period, our national industry manifested, on the whole, appreciable strength of resistance and solidity, thanks to its leaders, who understood how to make the best of every favourable opportunity that presented itself and to deal effectively with the adverse circumstances. With few exceptions, of a special character, they developed a lucrative business, and in many cases the urgent necessity of the moment was productive of a fresh impulse, which, although of a transitory nature, may serve to prepare new ground for the future.

In view of the abnormal situation our Government also deemed it advisable, in order to safeguard our national economy, to take special measures, as occasion arose, for the regulation of the relations between the various banking institutions and their depositors. The Moratorium which was declared for this purpose is now about to expire. The measures referred to were moderately and rationally applied, with very satisfactory results, inasmuch as the desired benefits were obtained without bringing undue pressure to bear upon anyone. For bills of exchange and Stock Exchange transactions other measures were adopted, which, together with those above mentioned, secured a sound and practical basis for the continuance of regular relations in the principal branches of home activities.

The general feeling of restlessness caused by the gravity of events, the tendency of the public to provide itself with liquid assets, and the large investments in State bonds of old and new issues, had the effect of reducing the flow of money to deposit accounts. This, of course, was inevitable in the circumstances; the same would have happened anywhere. The effects of such a grave situation, particularly if provocated by such tragic and lasting circumstances as the present, can only be removed by slow and persistent means.

We are glad to inform you, however, that money began to flow back again immediately after the outbreak of the general panic; the amount which thus has come in again is very considerable, and is not subject to any Moratorium restrictions.

The highly liquid nature of our investments greatly assisted us in meeting the requirements of the difficult situation. Our task was also lightened by the alertness of the banks of issue, particularly by the Bank of Italy, who, by prudent and able management, did much to facilitate matters and ease the situation, thereby proving themselves once more to be worthy of the implicit confidence reposed in them by the country. We were enabled to consider and treat on broad lines the requirements of our clients, particularly the legitimate needs of our industrial concerns, to which, even in these critical times, we have always given liberal support.

As a result of the above and other facilities, especially as regards the bank-note circulation, the condition of the Money market underwent a marked improvement; the official rate of discount, which on August 3 had been raised to 6%, was reduced on November 9 to 5½%. Public confidence gradually returned, and the 4½% National Loan, which had been opportunely prepared, was authorised by the Royal Decree dated December 19, and offered to the public, by whom it was almost entirely taken up. At the request of the Bank of Italy a group of banks was formed to guarantee one-half of the issue. You will be glad to hear that, as on previous occasions, our institution was keenly interested in this operation, and strongly supported it with a large participation in the Syndicate, and by facilitating and promoting the subscriptions of clients in every way.

During the last five months of the year 1914 we were obliged by force of circumstances to suit our actions to the special situation created in all the fields of economic activity by the great War. The problems which presented themselves day by day during this period were innumerable and unprecedented, and there was a marked falling off in banking transactions with foreign countries. Nevertheless, whilst always maintaining an attitude of prudent reserve, and carefully considering the consistency and purpose of each operation, we were able to increase our ordinary business.

We made a special point of seeing that all our investments constituted a liquid asset of the highest order, and for this reason alone we sometimes declined very remunerative operations.

We also turned our attention to other transactions which, in the exceptional circumstances of the moment, seemed to offer good profits—*i.e.*, the special and temporary financing of our national industries, which were urgently called upon to increase their output, and also the handling of the banking transactions arising from the increased importation of foreign goods and raw materials for Italian consumption.

BANCA D'ITALIA.

Head Office: Rome.

Capital—

Authorised and Subscribed, 300,000 Shares of Lire 800 .. .. Lire 240,000,000

Paid up, Lire 600 per Share 180,000,000

The Bank of Italy was formed in 1893 by an amalgamation of three banks then existing. Its capital was fixed at 300 million lire, or 12 millions sterling nominal, of which 210 million lire, or £8,400,000, were paid up; but in 1897 it was reduced to 180 million lire, or £7,200,000. The maximum amount of notes which the Bank of Italy and the Banks of Sicily and Naples could keep in circulation was, at the end of 14 years, not to exceed 864 million lire, or £34,560,000. Each bank was bound to accept the notes of the other banks in the cities in which they had legal currency. The metallic reserve was to be increased within a year to 40 per cent. of the notes in circulation, 33 per cent. of which was to consist of coin or bullion, in the ratio of at least three-quarters in gold and one quarter partly in silver coin. The remaining 7 per cent. might be composed of foreign bills of exchange on firms of the first order. Mortgage operations were forbidden. The Bank of Naples was authorised to continue its pawn operations. The banks were allowed to assume the office of provincial receivers of the direct taxes. The Bank, further, assumed the Treasury service of the State in all the provinces of the kingdom from February 1, 1895, until the end of 1912. The amount of statutory loans to be made by the Bank to the Treasury was fixed at 100 million lire. In consequence of the Adowa disaster and the general over-expenditure of the Government the position of the Bank of Naples became endangered, and the Government found it necessary once more to deal with the banking situation. Because of urgency the changes were at first made by Royal Decree, which was definitely sanctioned by the Law of March 1898. To ensure a guarantee for the redemption of notes it was ordered that the Bank of Italy should accumulate an irreducible minimum reserve of 300 million lire, or 12 millions sterling, the Bank of Naples 90½ million lire, or £3,620,000, and the Bank of Sicily 21 million lire, or £840,000. For any notes not actually covered by the reserve the holders had a claim on all gold and silver belonging to the banks. At the same time the law authorising the State to issue notes against 200 million lire, or 8 millions sterling, of metallic reserve was repealed. After the crisis of 1907 no very important changes were made in the banking law. The maximum circulation was slightly increased. There was also ordered to be some increase in the irreducible metallic reserve held against notes. It was also provided that, to give somewhat greater elasticity, the banks should be allowed to issue more in times of emergency. The amount in the case of the Bank of Italy was raised from 45 to 50 million lire, in the

* Including Lire 518,812,387 advances to the Treasury.

case of the Bank of Naples from 14 to 15 million lire, and in that of the Bank of Sicily from three and a-half to four million lire. But in every case the payment of a tax equal to one-third of the discount rate was to be exacted. If, however, the occasion seemed to require it the three banks were authorised to issue double the amounts just specified, on condition that they paid a tax equal to two-thirds of the discount rate. Any increase in the circulation above these limits would involve the payment of a tax of 7½ per cent.

The business of the Bank other than that of providing the country with currency is comparatively small. In accordance with laws passed in August and in November 1914 the Bank last year substantially increased its note circulation; and in the current year has, by means of note issues, lent large sums of money to the Italian Government. At the end of December 1913 the note circulation of the Bank was about 1,750,000,000 lire, or £70,000,000, and by the end of 1914 it had increased to about 2,150,000,000 lire, or £86,000,000. It has now risen to 2,790,000,000 lire, or £111,600,000. The whole of the increase has been for the purpose of making loans to the Government, these loans now standing at close to £50,000,000. The following statement shows the expansion in the note circulation of the Bank since the outbreak of war at the end of July 1914 between the Central Powers and the Allies:—

Note circulation ...	2,789,491,000	1,661,125,000	+1,128,366,000
Deposits	741,734,000	204,550,000	+ 537,184,000

The Bank of Italy has provided a large part of the money spent by the Italian Government upon the War. A Government loan was placed in December 1914 for 1,000,000,000 lire, or £40,000,000, on the basis of 4½ per cent. net, and another loan for 1,000,000,000 lire, or £40,000,000, bearing 5 per cent. interest at the price of 95 was placed in July 1915. Altogether by means of loans from the public and from the Bank of Italy the Government by the middle of August had borrowed 3,228,000,000 lire, or about £130,000,000, of which £50,000,000 was obtained from the Bank. Arrangements have just been concluded for $25,000,000 of Italian Government One-Year 6% Notes, to be disposed of in New York.

The actual amount of gold held at the end of last year was 1,118,000,000 lire, or £44,000,000. In the last 10 years the Bank has added £21,000,000 to its stock of gold. The expansion in the stock of gold and silver held by the Bank of Italy since 1893 is shown by the following statement:—

Gold and Silver Holdings of the Banca d'Italia at December 31.

* Sept. 20.

Comparative statements of the assets and liabilities of the Bank at the end of each year since 1900, and in 1895 and 1894, are furnished herewith.

In recent years the profit has shown substantial expansion, and last year was 38,256,000 lire, equal to about 20 per cent. of the capital and to 15 per cent. of the capital and reserve. Of this profit a sum of 4,500,000 lire was paid to the State, about 19,000,000 lire was specially allocated, and 14,400,000 lire was distributed to the shareholders by means of a dividend of 8 per cent. The great improvement in the profit in recent years is shown by the statement appended:—

Profits of the Banca d'Italia.

BANCO DE CHILE.

Head Offices: Santiago and Valparaiso.
London Agency: 94 Gracechurch Street, E.C.

Capital—

Subscribed, 400,000 Shares of $200 each	$80,000,000
Paid up, $100 per Share	40,000,000
Price of Share, $176. *Dividend*, 14%.	*Yield*, £8.

The first Bank of Chile was founded as far back as November 16, 1859, and was the original institution from which the Banco Nacional de Chile was formed in 1865. Three years before the establishment of the first Bank of Chile there was formed in Valparaiso the Bank of Valparaiso. In 1893 it was decided to amalgamate the Banco Nacional de Chile with the Bank of Valparaiso, and there was also brought in another Company entitled the Banco Agricola, which had been formed in January 1869. Thus the present Bank of Chile commenced its operations in January 1894, with its head offices at Santiago and Valparaiso and 23 branches scattered over the Republic. Since that time considerable progress has been made, and at present, in addition to the head offices and the London office, there are 45 branches, situated in all parts of the country. The amalgamated institution was formed with a subscribed capital of $40,000,000, divided into 200,000 shares, of which $20,000,000 was paid up. In 1906 the capital was increased by 100,000 new shares, placed at a premium of 100 per cent., to $60,000,000 subscribed and $30,000,000 paid up. The premium of $10,000,000 was added to the reserve fund. Steady growth of the business called for a further increase of capital in 1910, when a further 100,000 shares were issued at a premium of 70 per cent., thereby increasing the subscribed capital to $80,000,000 and the paid-up amount to $40,000,000. The premium of $7,000,000 was transferred to the reserve fund. Altogether a reserve fund of $22,000,000 has been accumulated, together with a contingency fund of $600,000.

At June 30, 1905, the deposits amounted to $100,492,042, and at June 30 1915, they were $209,112,492 paper and $21,447,559 gold, a comparison which reflects the steady growth that has occurred.

Further evidence of this growth may be seen from the tables which set out the liabilities and assets of the Bank in various years since 1895.

The gold assets and liabilities of the Bank are given below, while the currency assets and liabilities are contained in the larger tabulations herewith. Up to and including 1911 the gold and currency assets and liabilities were combined by the Bank, whereas now they are separated.

The growth of the business is amply reflected in the expansion that has occurred in profits. For the twelve months to June 30, 1904, a gross profit of $3,793,085 was secured and a net profit of $2,477,911. For the twelve months to June 30, 1914, the gross profit rose to $12,596,869 and the net profit to $7,407,885. During this period the dividend

gradually rose from 10 per cent. to 18 per cent. Naturally the profits for the twelve months to June 30, 1915, show a falling-off. The gross profit has amounted to $11,241,970, and the net profit to $5,999,592, while the dividend has been reduced to 14 per cent. Herewith we set out the profit record for each year since 1904:—

In the current year to June next conditions in Chile are showing great improvement, and the profits of the Bank may be greater than in any previous year. The price of nitrate, which for the year 1914 averaged less than 11*s.* per cwt. in Liverpool, in the current year has risen to about 13*s.* 6*d.* per cwt., and much greater profits are accruing to Chile in consequence. This is reflected by the course of exchange, which in the closing months of last year fell from 9¾*d.* to 7*d.*, and has now in October recovered to 9⅝*d.*

SPAIN, during her period of prosperity in the Middle Ages, had banks of deposit. One of them, indeed, the Bank of Barcelona, is said to have been founded so long ago as 1401, and to have attained great celebrity in its time. But when Spain declined in prosperity and power banking practically died out; and it was not till 1782 that the Bank of San Carlos was founded at Madrid. It was still issuing circulating notes in 1874. The Bank of Spain was founded in 1829 under the name of the Bank of San Fernando, but enjoyed special privileges only in Madrid and the places where it had branches until 1856. It was at first a Government Bank, and its name was changed in 1856 to that of the Bank of Spain. Even then, however, the Government had the right, when it pleased, to incorporate other banks. The legislation of January 8, 1856, prescribed that there should not be more than one bank of issue in any commercial city; the circulation of notes was limited to three times the capital of each bank; and every bank that issued notes was required to keep a coin reserve of at least one-third of its circulation. The minimum denomination of the notes was fixed at £1 of our money. In 1856 the charter was granted for 25 years; but in 1874

it was renewed for 30 years. The Law of March 19, 1874, conferred upon the Bank the exclusive privilege of issuing notes, and increased the capital from £1,320,000 to £4,000,000. All the existing provincial banks, then numbering 18, were ordered to liquidate their circulation and transfer it to the Bank of Spain. Nevertheless, the Bank was not constituted a State institution, and the State does not participate in its profits. But the State had the authority to require advances by the Bank to the amount of 5 millions sterling upon the deposit of proper guarantees. Notes of the Bank were made legal tender and limited to five times the capital. Nevertheless, the capital was increased soon after to 6 millions sterling, which carried the limit of circulation to 30 millions sterling.

There was a new revision of the charter in July 1891, the privileges of the Bank being extended till the last day of December 1921. The issue of notes to the amount of 60 millions sterling was authorised against a cash reserve of one-third, of which at least half was required to be kept in gold. The Bank, however, was required to pay for these privileges by advancing 2 millions sterling to the Government annually for three years, without interest or right to reimbursement until the expiration of the charter. By this constant borrowing from the Bank it became practically dependent upon the Treasury for its existence. Each year's Budget showed a persistent deficit, and the floating debt of the country increased enormously. There was an outcry throughout the country that the Bank failed to perform its commercial duties to the public, as the whole of its resources practically were at the mercy of the State. Matters continued to grow worse till the war with the United States in 1898. As a result of that war the circulation of notes was forced up in February 1899 to £58,380,200, while the value of the notes fell fully 50 per cent. The restoration of peace brought down the gold premium to 20 per cent.; and the Spanish Treasury, recognising how nearly it had ruined the Bank, as well as destroyed the credit of the country, set to work to restore order in the finances of both. The depreciation in the value of the peseta did not, however, injure the Bank; indeed, its net profits rose from £1,369,237 in 1895 to over 2 millions sterling in 1899. What made this the more remarkable was that the rates of interest and discount upon loans stood for a considerable time at only 3½ per cent., while the quotations of the Exterior Debt were so low as to yield a return of about 5½ per cent. to the purchaser. At last Señor Villaverde, as Minister of Finance, earnestly set about restoring order. By strenuous economies and the imposition of new taxes he and his successors succeeded in at last putting an end to the deficits and obtaining a surplus in 1899.

The Act of May 1902 again carried through a revision of the Bank's charter, the authorised note circulation then being raised to 2,000 million pesetas, or £80,000,000. The new Act required that the Treasury should reimburse to the Bank before the end of December 1911 the amount of obligations in its assets represented by Treasury certificates. The Treasury was forbidden to borrow from the Bank except by authority of the law; and the maximum limit of circulation against which only a reserve of one-third was required was reduced to

48 millions sterling. The Bank was thus required to keep a reserve of 16 millions sterling, of which half was to be in gold. In other words, against the maximum limit of 48 millions sterling, against which a reserve of no more than one-third was required to be held, half that one-third, or 6 millions sterling, had to be held in gold. Against the next 12 millions sterling of notes issued 40 per cent. was required to be in gold, and the remainder, up to a total metallic reserve of 60 per cent., might be in silver. Against the remaining 20 millions sterling which the Bank might issue 50 per cent. was required to be in gold, and the remainder, up to a total of 70 per cent., might be in silver. Still further to liberate the Bank from its subordination to the Treasury, and ultimately lead to the restoration of a stable exchange on a gold basis, an Act was passed in 1908 providing for the issue of Four per Cent. bonds running for 50 years to the amount of £6,400,000, for the exclusive purpose of taking up the outstanding Treasury certificates in circulation and in the vaults of the Bank.

A measure for further increasing the authorised note circulation to 2,500 million pesetas was passed by the Cortes last year. The note circulation is now 2,065,000,000 pesetas, while the gold held at home and abroad is 866,866,000 pesetas, and the stock of silver is 732,912,000 pesetas. The rate of exchange has now fallen to 24.80, and the peseta is thus at a small premium after having stood at a discount for many years.

The great War which has been raging since the summer of last year has brought advantage to Spain, which has experienced a heavy demand for goods of all kinds and descriptions, more especially manufactured articles. At the same time the imports of goods into Spain have declined appreciably. In the first six months of the current year Spanish exports have been nearly £25,000,000, while imports have been only £20,572,000, the exports exceeding the imports by about £4,400,000. For the corresponding period of 1914 the exports were only £18,682,000 and the imports were £23,538,000, so that there was an excess of imports amounting to nearly £5,000,000. Thus the improvement in the trade balance for the six months compared with last year is over £9,000,000. This change accounts for the improvement in the value of the peseta and the large accumulation of gold in the vaults of the Bank of Spain. The improvement in the situation of the Bank of Spain will be evident from the following statements:—

* October 9, 1915. † Of this total 106,492,000 Pesetas are foreign balances.

The greater business transacted in 1914, coupled with the profit arising from exchange transactions, brought the Bank a net profit of 30,294,000 pesetas, against 27,900,000 pesetas in the previous year. This was equal to a dividend of 20 per cent., and this was the rate of distribution. The course of the profits of the Bank since 1904 is shown by the statement appended:—

Profits of the Banco de España.

1904 ...	57,167,240	15,237,549	8,869,209	33,060,482	32,400,000	21·6	789,778

From the statement of liabilities and assets presented herewith it will be seen that the business of the Bank expanded rapidly until 1900, and that after that year its deposits did not grow until 1914, when they rose from 922,000,000 pesetas to 1,105,000,000 pesetas. On the other hand, its note circulation since 1900 has continued to grow, and the expansion has been attended by a corresponding increase in the cash in hand. In 1900 the proportion of cash to notes in circulation was not much over 50 per cent., while now the proportion is over 78 per cent., and this increase in cash in proportion to the note circulation has been attended by a steady improvement in the exchange. During the war with the United States the gold premium rose to 86 per cent.; in 1906 it touched 6 per cent., and at the present time there is a discount of 1.6 per cent. instead of a premium.

BANCO DE LA NACION ARGENTINA.

Head Office: Buenos Ayres.

Capital—	Paper
Authorised	$128,000,000
Paid up	128,000,000

The Bank of the Argentine Nation is the official Government institution, the directors being nominated and all the liabilities guaranteed by the Government. It is in effect the successor of the old National Bank, which, in common with many other institutions, suffered very acutely from the severe political and financial crisis from which the country suffered in 1890. As a result of the general confusion a new Government was called into being under the Presidency of Signor Pellegrini. After careful consideration of the various problems that presented themselves, the Government came to the conclusion that it was desirable, rather than bolster up the tottering credit of the old National Bank, to establish a new institution, and, accordingly, there was founded in October 1891 the Banco de la Nacion Argentina, with a capital of $50,000,000, national currency, the shares of which were offered for public subscription. In order to obtain the confidence of the people for the new institution the Government promised a certain amount of administrative control and retained the right of appointing the President. Moreover, in the charter creating the Bank certain restrictions were imposed with the idea of guaranteeing both the shareholders and the public against abuses which had prevailed in the past. In such a critical time, however, public confidence was not easily established, and the result was that the new Bank was not regarded with popular favour, and the shares were not taken up. Fortunately, however, the new President was a man of considerable foresight and strength of character. Seeing that it was impossible to start the new Bank successfully on a shareholding basis, he decided to replace the system of public subscription by an issue

of Government notes, and the Bank thus became a Government institution. Moreover, realising that the future of the institution must depend upon the establishment of public confidence, Dr. Pellegrini took especial pains to place the management of the Bank in the most capable hands. The Bank opened its doors on December 1, 1891, and Dr. Pellegrini, accompanied by the then Minister of Finance, was present at the inauguration, detailed the reasons actuating the formation of the new Bank, and expressed the great confidence with which he regarded the future. He pointed out that he recognised that the Bank was founded against the opinion of certain circles, but that, nevertheless, if the attention of the Council of Administration were given "to the interests of the whole Republic, to its industries and to its commerce, the day will come when your efforts will be rewarded by the importance that this establishment will have acquired." He stated that the Bank had not been created in the interests of any political party, proof of which was afforded by the composition of the first Council of Administration; adding, according to the French edition of the Bank's report, "l'intention qui a présidé à la nomination de chacun de vous n'est pas due à une situation politique que vous n'avez pas, mais à votre connaissance du milieu où votre action va se développer et des intérêts que vous êtes appelés à servir. Cette Banque est fondée dans le but unique de favoriser l'industrie et le commerce et vos aptitudes sont une garantie de succès, car vous en connaissez bien les exigences. Permettez-moi, messieurs, de recommander à votre attention espéciale une corporation qui n'a pas mérité jusqu'à ce jour la faveur des établissements de crédit et qui est, cependant, digne du plus haut intérêt."

The foresight of Dr. Pellegrini has been amply justified, and the Bank has built up a position of the greatest importance in Argentina. Its growth has been even more rapid than even the President anticipated, and it has justified the confidence of those who were responsible for its establishment. At the end of 1892, when the first balance sheet was issued, the deposits in sterling equivalent amounted to £4,312,549. Twenty years later, at December 31, 1912, the sterling equivalent was £41,758,686. Similar growth is witnessed in other respects. Of late years the Bank has adopted the policy of extending the business by means of opening up new branches in all those parts of the Republic where the want has been felt, in so far as the means at their disposal have permitted. The result is that at the end of 1914 the number of branches in operation in the whole Republic amounted to 153.

In his report to his Excellency the Minister of Finance of the Nation, the President of the Bank pointed out that the year 1914 would be signalled in the economic history of the Argentine Republic by reason of the great lessons which it has taught for the future. The crisis, which was due to the excesses into which the country had fallen in recent years, may be said to have culminated in 1914, commercial and individual disasters reaching extraordinary proportions; the losses caused by the fall in the value of real and personal estate are immense, and only the strong vitality of the country, whose source of production remained unimpaired, could have averted the catastrophe. When the War broke out the Government closed the banks for a period of eight days and took exceptional measures to cope with the situation. The first measure was the closing of the Caja de Conversión, a step which guaranteed the stability of the currency. Laws were also passed relating to the moratoria, mobilisation of the conversion fund, rediscount, the deposit of gold, and a moratorium for inter-

THE
UNION TRUST COMPANY
LIMITED (OF CANADA).

CAPITAL, $1,000,000. RESERVE, $950,000.

TORONTO: TEMPLE BUILDING.
WINNIPEG: UNION TRUST BUILDING, MAIN STREET.
LONDON: 75 Lombard Street, E.C.

ADVISORY COMMITTEE—LONDON OFFICE:

CHARLES H. HOARE, Esq. (Chairman).
THE LORD HINDLIP. THE EARL OF ONSLOW.
MAJOR J. C. BRINTON, D.S.O. ARNOLD R. RATHBONE, Esq.

Accepts funds for Investment and Guarantees repayment of Principal and Interest at from 4 to 5 per cent. Recommends Securities and invests money for Clients in Canadian Bonds and Mortgages, undertakes the purchase, sale and management of property throughout the Dominion, supplies accurate information of Corporations and properties, acts as Executor, Administrator, Trustee, &c., Trustee for Bond and Debenture Issues, Transfer Agent and Registrar.

Full Particulars will be sent on application to the
LONDON MANAGER, G. COCKBURN, 75 LOMBARD STREET, E.C.

national operations. The Bank of the Nation was utilised for the whole movement, and its ability proved equal to the situation, so that the overgrowing confidence of the public in the Banq became accentuated. By reason of the contingency which had to be faced the balances on doubtful debtors and guaranteed accounts assumed large proportions, and accordingly the directors did not hesitate to devote to the purpose of writing down these accounts as far as possible the entire profits for the year after providing for expenses. They also applied to the same object the reserve fund of $3,500,000 paper, which was created in 1911 after an unusually good year. Altogether the Bank was able to write off 42 per cent. of the doubtful debts and 15 per cent. of the guaranteed accounts, especially those which are secured by real estate, whose value was insufficient on account of the drop in prices or which was so burdened by prior obligations as to diminish considerably the value of the security. Furthermore, the writing down of the doubtful debts has been carried out without affecting in the least the Bank's gold reserve fund, which remains intact.

Herewith we set out the profits of the Bank for each year since 1905:—

Profits of the Banco de la Nacion Argentina.

* Including sums written off. In 1914 these reached $18,799,000.

In the current year the situation in Argentina has very greatly improved in consequence of good crops and of the high prices they realised. The country has kept down its purchases of foreign goods, but, on the other hand, has very greatly increased its exports, and the trade balance in its favour shows a really remarkable change. With the maintenance of the great European demand for foodstuffs at high prices, and the continuance of economy in Argentina, it is probable that the country will not only be able to meet its interest payments on the great amount of foreign capital employed, but will be able to import a substantial amount of gold. In 1914 the stock of gold in the Caja de Conversion was reduced from 233,000,000 pesos to 222,000,000 pesos, and it has now been restored to 234,000,000 pesos.

BANCO DO BRASIL.

Head Office: Rio de Janeiro.

Capital—	Milreis
Authorised	70,000,000
Subscribed and Paid up, in Shares of 200 milreis, fully paid	45,000,000

Price of Shares, 184 milreis. *Dividend*, 9%. *Yield*, 4·89 %.

The first bank in Brazil was founded by Royal charter in 1809, under the title of Banco Publico, which was a little later changed to Banco do Brasil, with a capital equivalent at the then par of exchange to £400,000 of our current money. But this Bank was not successful, as its loans to the Government and its note issue became excessive. It was wound up in 1829 and subsequent years by the Government becoming responsible for its notes in circulation. In 1838 a private bank, known as the Banco Commercial, was started with a capital of five million reis. The capital, however, was not completely paid up until 1851. In this latter year a second bank, called the Banco do Brasil, was started with a capital of 10 million reis. Both the Banco Commercial and the new Banco do Brasil were authorised to issue promissory notes for small sums at short terms. This form of issue proved so popular that in 1853 the two banks, with local banks at Para, Pernambuco, Bahia, and Maharanao, were amalgamated under the title of the Banco do Brasil with a capital of 30 million reis. The new Bank commenced operations the following year under favourable circumstances, with exchange at par, and succeeded by 1856 in accumulating a considerable gold reserve in guarantee of its note issue. Unfortunately, the great crisis of 1857 in the United States seriously affected Brazil, where numerous failures took place. In addition to this, the new Banco do Brasil had to face competition from two other banks, the Banco Rural Hypothecario and the Banco Commercial and Agricola, and others in the provinces which had been authorised to issue notes on the security of Government stock. In consequence of this competition the Banco do Brasil found itself constrained to take over the affairs of its principal competitors. To carry out this amalgamation the capital of the new concern was raised to 33 million reis. But after a few years of comparative prosperity, the Paraguayan war and the crisis of 1864 brought it into difficulties, like its predecessors. The note issues had reached enormous proportions; exchange fell at one time to 14*d.* from the par of about 27*d.*, and it was only after the termination of the war in 1870 that the Bank was able to begin withdrawing paper money. Revival, however, was rapid, and by 1873 exchange had risen again to par. Unfortunately, the price of coffee fell seriously in 1877. A period of acute depression ensued, and exchange once more fell to 18*d.* in 1885. But in 1888 the current of prosperity turned again and exchange went over par, gold being imported in considerable amounts. An attempt was then made to return to specie payments, and for the purpose a new Bank, the Banco National do Brasil, was organised. Simultaneously, however, the Banco do Brasil availed itself of the right to issue notes, and increased its circulation from under 11½ million reis to nearly 52½ million reis, and its nominal capital to 100 million reis. Exchange naturally fell rapidly. The Bank then hastened to call in its notes, and in 1893 had succeeded in reducing them to somewhat under 9½ million reis. On the abolition of the Monarchy a new bank of issue was established, called the Banco dos Estados Unidos do Brasil, with a right to issue notes convertible when exchange should be established at par for twelve consecutive months. The capital was fixed at 200 million reis. Notes were issued in excessive amounts; exchange fell, and confidence was destroyed. In 1893 the Banco do Brasil and the Banco dos Estados Unidos do Brasil were amalgamated under the denomination of Banco da Republica, with a nominal capital of 156½ million reis. At the same time the Government assumed responsibility for the note issues of the new Bank and assisted it in various other ways. The position, however, proved too difficult for the Bank, and the management was taken over by the Government, which, to satisfy creditors, issued Three per Cent. Federal bonds to them. In 1905, the liquidation being practically completed, the Bank was reorganised under its present name of the Banco do Brasil, with a nominal capital of 70 million reis and a paid-up capital of 45,000,000 reis, of which one-half is owned by the Government. The shares are of 200 reis, fully paid.

In the last 10 years Brazil has made great progress and has secured a large amount of foreign capital for railway construction and other objects, which when it becomes fully productive will add largely to the country's wealth and income. Unfortunately, the series of political crises in Europe which began with Morocco has interfered with the completion of this programme of development, and the resulting stoppage of the flow of foreign capital

has seriously affected the finances of the country. Moreover, the heavy fall in the prices of coffee and of rubber has reduced the country's foreign income concurrently with the need for a greater income to meet interest payments upon the new capital supplied in recent years. This situation brought about a decline in the exchange from it new par of 16*d.* to 10*d.* A recovery was brought about by an arrangement to meet the coupons on the Government's debt by a Funding loan, and the reduction in the demand for exchange thus effected has been attended by a great contraction in imports. In the first seven months of 1915 the exports exceeded the imports by £10,651,000, against an excess last year of only £3,995,000, thus indicating the ability of Brazil to meet her foreign obligations now that the interest on the Government debt is funded and the exchange is maintained at over 12*d.* per milreis. The value of the imports for the first seven months of 1915 is only £16,640,000, against £26,797,000 last year in the same period and £41,084,000 two years ago.

In consequence of the expansion in trade the deposits of the new Bank grew from 20,000,000 reis in 1906 to no less than 176,000,000 reis in 1911, when the Morocco crisis occurred in Europe. After that they declined steadily until at the end of last

December they were under 104,000,000 milreis. The note issue is controlled by the Government through the Caixa de Conversao, and the Bank has no power of issue. The statement we give herewith shows the amount of the Bank's funds and the manner they are employed.

Since its reorganisation the Bank has been fairly successful in earning profits, and in 1912 and 1913 paid dividends of 10 per cent. In 1914 the net profit fell from 6,756,000 milreis to 4,270,000 milreis, and the dividend was reduced from 10 to 9 per cent. The profits earned in recent years were as set out below:—

Profits of the Banco do Brasil.

* By reason of the Govt.'s holding of one half of the Bank's capital, 50% of the dividend goes to the Brazilian Treasury.

BANCO ESPAÑOL DEL RIO DE LA PLATA.

Head Office: Buenos Ayres.
London Office: 7 Fenchurch Street, E.C.

Capital—
Authorised $100,000,000 (£8,730,158)
Subscribed and Paid up ... $97,878,000 (£8,544,904)
Price of Share, £10 3/8. *Dividend*, 4%. *Yield*, £7 16*s.* 10*d.*

THIS Bank, which ranks as one of the most important of the joint-stock banks working in South America, was established in 1886, commencing operations in Buenos Ayres in January 1887. The original capital was $3,000,000 Argentine currency. By 1889 it was found necessary to increase the capital to $5,000,000, and later in the same year to $6,000,000. In 1904 it was decided to bring about a further large increase to $20,000,000. Since then the authorised capital has been raised to $100,000,000 (£8,730,158) and the paid-up capital to $97,878,000 (£8,544,904). The reserve fund has also been steadily increased, and at June 30 last amounted to £4,149,465. The very great growth in the business of the Bank may be seen from an examination of the deposits. In 1887 the deposits amounted to £575,000; by 1895 they had risen to £3,709,000; by 1903 they reached a total of over £7,000,000; and by 1906 they had increased to £11,600,000. Further rapid progress ensued, and in 1910 they reached £20,300,000.

By June 1914 they reached a total of £21,500,000. During the following twelve months the country and business generally were adversely affected, first of all by a severe economic crisis, and subsequently by the War, and it is not surprising, therefore, that at June 30 last the deposits had fallen back to £15,958,878. On the other side of the accounts, the cash in hand fell from £9,337,730 to £7,102,726. Bills discounted also fell from £13,324,800 to £10,019,931. The report for the year to June 30 last pointed out that twelve months ago signs were already appearing of a reaction from the acute economic crisis through which the country had been passing for some time previously, permitting the hope of a gradual improvement in the state of affairs; but the outbreak of war "has had an intense repercussion upon this country, aggravating afresh and with a greater intensity the difficulties of the situation, to such an extent that during the first moments of the conflict confidence wholly disappeared and commerce was paralysed in a manner quite without precedent. A natural consequence of this was, as is well known, a series of commercial and private failures, causing very considerable losses. Happily this state of affairs did not last long, thanks to the great productiveness of the country and the comparative rapidity with which international trade was re-established. The high prices and ready sale obtained for our meat, wool, hides, &c., the bountiful harvest of cereals, also sold with excellent results, caused a real and effective improvement in the situation, dispelling the uncertainty which prevailed and creating complete confidence in the economic future of the Republic, which rests on solid foundations. Our institution, so closely connected with the commercial activity and economic development of this country, has naturally, under the adverse conditions, suffered a set-back, but the general improvement in the situation is already being reflected in the gradual and constant increase of the number and volume of the operations of the Bank, an increase which has been particularly noticeable in the last months of the half-year just ended. This seems to us to be a good sign for the future."

We set out herewith a statement of the liabilities and assets of the Bank for various years from 1877.

The growth in profits is also of a most astonishing character. For the year to June 30, 1904, the net profits were £75,213; by 1909 they had risen to £536,691; by 1912 they had again practically doubled, reaching a total of £1,095,967. Further progress occurred during the following twelve months, and for the year to June 30, 1913, they amounted to £1,206,565.

Naturally, the results for the twelve months to June 1915 are much poorer than those for the previous year and the gross profits have receded to £1,031,461. Economies have been found possible in working expenses, and they have dropped from £698,108 to £661,764. The net profits thus amount to £369,697. From the foundation of the Bank up to 1914 the dividend never sunk below 10 per cent., while from 1907 to 1913 the rate was 12 per cent. per annum. For the twelve months to June 1914 the rate was reduced to 11 per cent., while the result of the fall in profits for the past twelve months has brought about a reduction in the rate to 4 per cent. Herewith we set out the profit record for each year since 1904:—

Profits of Banco Español del Rio De La Plata.

Year ended June 30	Gross Profits.* £	Salaries and Other Expenses. £	Net Profits. £	Dividend— Amount. £	Dividend— Rate. %	Special Allocations. £
1915 ...	1,031,461	661,764	369,697	342,125	4	28,511

1905 ...	343,987	224,346	119,641	99,668	10	19,973
1904 ...	298,997	223,784	75,213	64,878	10	10,335

* Less rebate.

The proportion that the shown net profit bears to the paid-up capital is 4.3 per cent., to capital and reserve combined 2.9 per cent., and to the total working resources 1.1 per cent.

The Bank has as many as 15 branches in the city of Buenos Ayres itself, while there are 33 offices in the other towns of the Argentine Republic. There is also an office in Uruguay, at Montevideo, and three branches have been opened in Brazil at Rio de Janeiro, Sao Paulo, and Santos respectively. But in addition to these 52 offices in South America the Bank is represented in Europe at such important centres as London, Paris, Madrid, Hamburg, and Genoa, and other European branches have been opened at Barcelona, Bilbao, Coruña, San Sebastian, Valencia, and Vigo. The Bank is thus able to facilitate all kinds of financial operations between the various Spanish-speaking countries. Originally started by financiers in Buenos Ayres, a considerable amount of French capital has also been introduced, and the Bank is thus of an international character.

BANK OF DENMARK

(BANQUE NATIONALE DE COPENHAGUE DANEMARK).

Head Office: Copenhagen.

Capital—

Subscribed and Paid up, in Shares of Kr. 2,000, Kr. 1,000 and Kr. 200 Kroner 27,000,000

Price, 153%. *Dividend*, 8%. *Yield*, 5·25%.

As early as 1736 a charter was granted by the Government of Denmark to a Bank which acquired, among other privileges, that of issuing notes. The freedom of issue was abused, so that in 1745 it became necessary to grant a temporary dispensation from the obligation to redeem the notes on presentation. Very quickly a second dispensation had to be issued, so that from 1757 till 1845, a period of 88 years, the bank-notes remained irredeemable. In 1773 the Bank was taken over by the State, and the note issues were increased so largely that within the following 10 years the circulation rose to two and a-half times what it was in the beginning, and the notes were depreciated to the extent of 15 per cent. During 1807-14, when Denmark was involved in the great French wars, the Government had to rely largely on the issue of notes for meeting its expenses, and the circulation, which had been in 1773 only 6 million rigsdalers, rose at the end of 1812 to 142 million rigsdalers. The consequence was that in the latter year 1,760 bank dalers were equal to 100 dalers in specie. Matters having come to such a pitch the Bank was declared bankrupt, and at the beginning of 1813 a new State Bank, with the name of Rigsbank, was created. Previous to this, however, the Duchies of Schleswig and Holstein were able to secure for themselves a special Bank in Altona, which issued redeemable notes and replaced the depreciated currency. As the new Rigsbank had no capital, and, therefore, no means of calling in the depreciated currency and replacing it by redeemable notes, a lien was imposed on all real estate, corresponding to 6 per cent. of the value of the property, and a rent-charge of 6½ per cent. per annum on the amount of the lien was exacted. It amounted to about 2½ million dalers, and was applied to the reduction of the circulation. The rural owners of property resisted the new charge, so that to a great extent it had to be collected only from the urban proprietors. This, of course, reduced the amount of the annual rent-charge. In 1818 a private Bank called the National Bank was created to take the place of the State-owned Rigsbank. Those who were subject to the rent-charge just mentioned were transformed into shareholders in the new Bank, being credited with shares to the amount of the lien in favour of the Bank. For a considerable time the new Bank was unable to pay dividends—indeed, not until 1845. After that time, however, the situation was so much improved that owners of property who had shirked the taking of shares in the Bank now came forward to demand them, and were permitted to enrol themselves as shareholders on condition that they paid up in cash such amounts as might be required to bring up the shares due to them to round hundreds of dalers.

In 1878 the capital of the Bank was fixed at 27 million kroner, which coin had recently been adopted as the unit of value. Gradually the circulation, which in 1818 amounted to 31 million dalers, was reduced by 1845 to 16½ million dalers, and then redemption of notes was recommenced and dividends were paid. On this occasion it was decided that the issue of notes must not exceed twice the cash in hand, in which was included not only silver actually in possession of the Bank, but sight drafts on Hamburg to the extent of not more than one-fourth of the total cash. The part not covered by cash was required to be covered by easily realisable securities to an amount exceeding by 50 per cent. the notes secured by them. In 1854 the maximum limit of notes was fixed at 24 million dalers. But in 1859 the maximum limit of issue was abandoned, and instead a maximum fiduciary issue was fixed at 13½ million dalers. Beyond this fiduciary issue the Bank might issue notes to any amount so long as they were fully covered by silver. In 1873 gold was adopted as the standard of value, and it was decreed that the Bank may issue notes to any amount provided it has in its possession cash equal to the excess of the issue over 27 million kroner and not less than three-eighths of the entire outstanding circulation. The part of the issue not covered by cash must be covered by good and safe assets in the pro-

Liabilities of The Nationalbanken i Kjøbenhavn (Banque Nationale de Copenhague).

portion of 150 kroner to each 100 kroner of notes. The assets may be bills of exchange, either inland or foreign, balances repayable on demand by foreign correspondents, stock exchange securities taken at the price of the day, notes on borrowers secured by collateral, and mortgages on real estate, the last named, however, not to exceed 6 million kroner. Cash is stated to consist of legal current coin at its face value; foreign gold coin or bullion; and, to a limited amount, silver bars and silver foreign coin. The Bank is required to redeem its notes in gold at their face value on presentation at its head office, and to purchase all gold bars offered. In 1877 the fiduciary issue was increased to 30 million kroner, and in 1897 to 33 million kroner. Since 1886 the balances held by the Bank of Norway and the Swedish Riksbank to the credit of the National Bank may be reckoned as part of the cash. The National Bank is only required to present a monthly account to the Minister of Justice, acting as Bank Commissioner, showing that the conditions of the law are duly fulfilled. If they are not, however, a month's grace is granted to the Bank to comply with the law. In 1907 the Bank charter was renewed for 20 years, and it was required that half the circulation must be covered by cash, the remainder by good and sound assets. Under exceptional circumstances an Order in Council may be granted permitting the limit to be exceeded on paying the Treasury 5 per cent. per annum on the excess. The management of the Bank is conducted by five managing directors, of whom two are appointed by the Government and three elected by the board of directors, which consists of 15 representatives of the shareholders.

From the statement herewith of liabilities and assets of the Bank at various periods since 1840 it will be seen that the expansion in its note circulation has been continuous.

Denmark has also gained great advantage from the War, as it has been able to sell its produce at high and profitable prices both to Germany and to England. The prosperity of the country has brought about a great expansion in the note circulation, has enabled the Bank to make a substantial addition to its cash holding, to add to its investments, and to leave a large sum of money with its correspondents. The prosperity is shown not merely by the very large amount of notes in circulation, but by the considerable sums of money that have been repaid to the Bank of Denmark, the bills held being only two-thirds of the normal amount, while loans and advances have been reduced by nearly 50 per cent. The comparison of the position of the Bank at the end of September this year and at the end of July last year will give some indication of the advantages accruing to the country:—

When Japan decided to adopt Western civilisation it speedily came to see that it was necessary to introduce banking practice. It made several experiments which were not very successful. And having thus felt its way, it undertook the study of the banking systems of the leading countries in the world: England, France, Austria, America, and so on. It came to the conclusion that the banks of England and of France had been so long established and had so ancient a history that their systems would not apply to Japan. The Imperial Bank of Germany was a new institution, but even it seemed unsuitable for Japanese purposes. The Bank of Belgium, however, recommended itself. It was new; there had been several mistakes before it was adopted, and, as the Belgian Government had been able not only to profit by its own mistakes, but to take advantage of the long experience of so many European countries, Japan decided that the Bank of Belgium was the best model to follow. It, however, adopted some of the characteristics of other European banks, and in regard to note-issuing and reserves, it followed, to a certain extent, the Reichsbank. The object of the Bank of Japan was to withdraw inconvertible notes from circulation, to unify the paper currency, and to facilitate the handling and disposition of money belonging to the Treasury and the National banks, and to adjust the monetary conditions prevailing at home and abroad and regulate the rate of interest. It was established by Imperial Ordinance in 1882. The Yokohama Specie Bank had been established two years previously. The latter was organised on the joint-stock principle, and its special object was foreign exchange and issuing of drafts on commercial commodities, inland exchange and issuing of drafts on commercial commodities, advancing loans, deposits of money and custody of articles of value, discount and collection of bills of exchange, promissory notes and other securities, and exchange and coin. It has a capital of 30,000,000 Yen, or £3,000,000. It will be seen that it issues no notes. The Bank of Japan, on the other hand, is forbidden to make loans on the security of real estate or shares of banks or corporations; on the security of shares of the Bank of Japan, or to purchase the same; to become a shareholder in industrial corporations, or to engage, either directly or indirectly, in industrial enterprises of any kind; or to become the owner of real estate, except so far as is necessary for establishing the head office and branches of the Bank.

When the Bank was first established the Government was a large shareholder, but its shares were afterwards transferred to the Imperial Household Department. The Bank of Japan is responsible for the custody of the Government's cash and negotiable instruments. It is entrusted with the management of the Treasury receipts and disbursements, the investment of the Treasury funds, and the management of national bonds. So far the Bank is almost a part of the Department of Finance, and performs valuable services in facilitating the work of that Department. In return, it is obliged to transact that business without remuneration. The Government appoints the Governor and the Deputy-Governor. The directors are, likewise, appointed by the Government from among candidates elected by the shareholders. The Government also appoints official inspectors from among the officials of the Department of Finance, who have a voice in the directors' meetings and even in the meetings of the shareholders, though they have no vote in either. The Bank is required to keep gold or silver coins, or bullion of those metals, as a conversion reserve, equal in amount to the convertible Bank notes issued. The amount of silver coin and silver bullion in no case is to exceed one-fourth of the whole. But the Bank of Japan, outside the provisions of the paragraph just cited, may issue further convertible Bank notes, on the security of Government bonds or Treasury bills or other bonds and commercial bills of a reliable nature, up to 12 millions sterling. With the special permission of the Minister of Finance the Bank of Japan may make a still further increase of notes, in order to meet special emergencies, on the security of Government bonds or Treasury bills, or other bonds or commercial bills of a reliable nature, the notes being subject to a special tax of not less than 5 per cent. per annum, the rate of interest to be fixed in each case by the Minister of Finance. The Bank must supply by way of loan not more than £2,200,000 to the Government without interest. The notes issued by the Bank of Japan on the security of Government or other bonds are subject to a tax of 1¼ per cent. per annum, less the amounts lent to the Government or others without interest, or at interest not exceeding 1 per cent. In making advances on current accounts or loans for a fixed period the Bank of Japan must obtain the sanction of the Minister of Finance as to the amount of such advances and loans, and the rates of interest to be charged. The Government superintends all the business of the Bank and restricts and forbids the action of banks, not conforming to the Bank Acts or Articles of Association, or contrary to the interests of the Government.

The subscribed capital of the Bank is now Yen 60,000,000, or £6,000,000, and the paid-up capital

Liabilities of The Bank of Japan.

is Yen 37,500,000, or £3,750,000. The paid-up capital of the Bank has been successively increased since 1883, when it was only Yen 4,000,000. The Bank's business has grown with great rapidity. During the period in which the finances of Japan were affected by the war with Russia the deposits attained a total of Yen 471,000,000. But this was, of course, an exceptional situation, and just prior to the present European war they had fallen back to Yen 153,000,000.

In 1914 a series of misfortunes visited Japan, both the home and foreign trade showing severe contraction,

LADD & TILTON BANK

PORTLAND, OREGON, U.S.A.

ESTABLISHED 1859

Report made to the Superintendent of Banks for the State of Oregon, September 2, 1915.

while there was much anxiety as to the future. The course of the War, however, has brought certain compensations to Japan which have already brought about a substantial recovery in trade, and seem likely to cause still greater expansion. This was the demand for war munitions with which Japan has been able to supply Russia. The consequent maintenance, indeed we believe expansion, in exports was attended by a great contraction in imports, and the trade balance became much more favourable to Japan. For the eight months to August the exports of Japan were £42,641,000, against £41,142,000 last year and £39,296,000 in 1913. On the other hand, the imports for the eight months were only £37,000,000, against £46,708,000 last year and £51,352,000 two years ago. Thus there was an excess of exports for the first eight months of this year of over £5,600,000, against an excess of imports last year of £5,566,000 and of over £12,000,000 two years ago. The effect of the increasing exports of Japan is being shown by the situation of the Bank of Japan. Last year the deposits of the Bank showed contraction, but this year there is expansion, and the great increase in the accounts of the Bank of Japan with other banks seems to indicate that the foreign balances of the Bank are exceptionally large. Before the War the accounts with other banks were 185,000,000 Yen, and they are now 298,000,000 Yen. If these increased balances are due to the payment made in London to Japan by Russia for munitions it would account in some degree for the demand for Japanese Government bonds that has recently been in evidence in the London market, and for the announcement that the Japanese Government intends to redeem the Japanese Treasury bills now held in England. The effect of the War upon the Bank of Japan will be evident from the following statement:—

Last year the net profit was 5,742,000 Yen, equal to 15 per cent. upon the capital and to 8.6 per cent. upon the capital and reserve employed. The dividend paid for a number of years past has been 12 per cent., and after the distribution of this substantial dividend considerable sums have been placed to reserve. The profits of the Bank since 1904 have been as follows:—

BANKERS' TRUST COMPANY.

Office: 16 Wall Street, New York, U.S.A.

Capital—
Authorised, Subscribed, and Paid up, 100,000
Shares of $100 each $10,000,000
Price of Shares, $440. *Dividend,* 20%. *Yield,* 4·6%

The Bankers' Trust Company began business March 30, 1903, with a capital of $1,000,000, and a surplus of $500,000. The bankers who founded it desired to form a trust company which could handle the fiduciary business which the National Banks with which they were connected were prevented from dealing with. It was decided at the outset that the new Company should not do a commercial banking business, and this policy has been adhered to. About the the time of its organisation a speculative element was very active in the New York banking field, and it was deemed advisable to place the stock of the Bankers' Trust Company in a voting trust to avoid the risk of its control falling into the hands of speculators. This voting trust contiuued until 1913, when it was dissolved.

On October 1, 1909, the capital was increased to $3,000,000, and the surplus to $4,500,000. On August 7, 1911, the capital was increased to $5,000,000 and the surplus to $10,000,000. Shortly after the Mercantile Trust Company of New York was absorbed. On March 18, 1912, the capital was further increased to $10,000,000, the surplus remaining at $10,000,000, and shortly after the Manhattan Trust Company was acquired.

The Company does a large business as agent and trustee for corporations, and also acts in various fiduciary capacities for individuals. Its foreign department is responsible for the traveller's cheques of the American Bankers' Association (A.B.A. Cheques), for the issuance and protection of which the Company is the accredited agent.

The Bankers' Trust Company became a member of the New York City Bankers' Clearing House in 1911, and its cash reserves conform to the regulations of that body. From the statement herewith it will be seen that at the end of last June with deposits of $189,000,000 it had cash in hand and in the banks of $37,000,000, a proportion of nearly 20 per cent. Including exchanges for the clearing house, the proportion of cash to deposits was over 26 per cent. Beyond this the Company held securities amounting to nearly $45,000,000. A Trust company in the United States is merely a bank under another name. It has all the privileges of a bank other than that of issuing notes, and beyond this is permitted to act as trustee. The wide powers of the trust companies have caused bankers to demand similar powers, and now that the new Federal Reserve Banks have been created and are responsible for the issue of notes the constitutional difference between the National Banks and the Trust companies will ultimately disappear. The statement herewith reveals the rapidity with which the business of the Company has grown. In the short space of 12 years to June last its deposits have expanded from nothing to $189,000,000. According to the latest figures, the deposits had been further raised to $214,000,000 in September. The growth of the net profits has been as remarkable as the expansion in business. They have risen to $2,708,000, equal to a dividend of 27 per cent. upon the capital stock and to 13½ per cent. on the capital and surplus. The regular dividends are now at the rate of 20 per cent. per annum. Beyond the regular dividends shareholders in 1909 received a special cash dividend of 50 per cent. on old stock. The profits

When the great Napoleon found himself at the head of the French nation as First Consul he set about reorganising the country politically, economically, and socially. Among other things, he decided to establish a great issuing bank which should serve the interests of the State and also of trade. Previously, banking had not made much progress in France. The disasters that attended Law's plan had brought the very name of banking into discredit. Nevertheless, there were several institutions which did banking business, although they did not take the discredited name. Two of these in particular the First Consul decided should be amalgamated and should be constituted the national bank. One of them very readily fell in with his views. It entered into voluntary liquidation, accepted a charter from the Government with the name of the Banque de France, and set up with a nominal capital of 30 million francs, or £1,200,000. The capital was got together very slowly. Indeed, in the first instance the Government had to lend largely to the Bank from the sinking-fund surplus. The loans were repaid, and gradually the Bank began to do a large and profitable business. But a few years passed before the second of the banks referred to came into the amalgamation and fully constituted the Bank of France. Then the capital was raised to 45 million francs, or £1,800,000. In its early days the Bank of France somewhat imitated the action of the Bank of England when it also was in swaddling clothes. It lent to the Government to a much larger extent than it accommodated the trading public. Still, it did give accommodation to merchants and bankers. The Bank, like the Bank

of England, at its start was given a very free hand. It was given a charter at first for only 15 years. But before that period expired the charter was renewed for another 25 years. That again was renewed, and so on. Moreover, the Bank of France, like the original Bank of England, was not tied by rules regulating either the issues of notes or the keeping of reserves. The Bank of France has always had greater freedom in these respects than most of the other State banks, and, consequently, it has weathered storms which probably would have proved fatal to most of the other great institutions of the world. The Bank was founded in 1800, 106 years after the Bank of England, and, broadly speaking, upon very much the same model. From that time until Waterloo France never was at peace. The Bank was started in the midst of almost universal war, and universal war continued throughout its infancy. Furthermore, in 1812 Napoleon rushed into the mad invasion of Russia, and at last had to abdicate. It was a time when the greatest nerve, the greatest skill, and the greatest experience were required to tide a bank over its difficulties. It is an extraordinary proof of the capacity of the men who controlled the Bank of France that they succeeded in getting over so long-continued and so terrible a crisis without failure.

In the beginning the Bank of France was intended to be governed by representatives of its own shareholders. The money was found by them, and, as in the case of the Bank of England, it seemed only reasonable that they should guide it. Accordingly, they were allowed to elect the first Governor and Deputy-Governors, to elect also Regents, or, as we call them, Directors, and *Censeurs*, or supervisors. Very soon, however, when Napoleon became Emperor and saw almost all Europe excepting England and Russia quivering before him, he resolved that the real management should be invested in a nominee of the Government. Accordingly, he appointed during pleasure both the Governor and the two Deputy-Governors. That organisation has lasted till to-day. The Bank was not required to keep gold. In fact, France was then, as she nominally is now, a bimetallic country, and the Bank accordingly would have been fully justified if it kept only silver. But the Bank was too wisely governed to commit so great a mistake. It has always held a very considerable reserve in both metals. Lastly, the Bank was allowed very great discretion in regard to the issue of notes. The Government had always, indeed, fixed a maximum beyond which the issue must not go. But, likewise, it has always raised the maximum whenever a strong public demand arose. Therefore, there has been the appearance of a strict regulation and the reality of a very wide discretion. Again and again the limit has been raised until at the present time the Bank is authorised to issue 272 millions sterling. It is unnecessary to consider closely the history of the Bank during the Restoration and the July Monarchy.

It would, however, be doing injustice to the management of the Bank of France not to note that the crisis which attended the deposition of Charles the Tenth and that which ushered in the downfall of Louis Philippe were tided over so ably that the prestige of the Bank rose inestimably. In 1810, five years before the fall of the great Napoleon, the capital of the Bank of France was £3,600,000; its total note issue was £4,139,159; and its loans and discounts amounted to £6,697,089. In 1850, two years after the fall of the last of the Bourbons, the capital had risen to no more than £3,690,000, while the note issue had increased to £19,847,009; on the other hand, the loans and discounts were somewhat less at £6,468,491. In 40 years, therefore, there was a rise of only £90,000, or 2½ per cent. in the capital; of as much as £15,707,850, or 383.0 per cent. in the note issues; but there was a diminution of £228,598, or 3.4 per cent., in the loans and discounts. When Louis Napoleon was elected President of the Republic confidence revived. The bad features of the great Napoleon's career had been forgotten. Only the splendour of his victories was fully remembered. And, naturally, France was delighted that in spite of the coalition which had forbidden her a Napoleon she was able to place the nephew of her hero at her head. The *coup d'état* followed; and the second Napoleon crowned himself as Napoleon the Third. France then entered upon a great development. The country was covered with a network of railways; canals were constructed; banks sprang up in all directions. Manufactures flourished, and visibly the wealth of the nation grew larger and larger. It was a result, partly, of the new confidence the country felt in itself in making a Buonaparte Emperor and so defying the whole of Europe; partly it was owing to the country's increasing recovery from the effects of the Revolution and the revolutionary wars; partly it was a natural consequence of the construction of railways and of a wiser fiscal policy; and partly it was due to the gold discoveries in California and Australia. The crises that were occasioned by the war undertaken for the liberation of Italy by Napoleon the Third, by the great American Civil War, by the wild expedition to Mexico, and by the wars of 1864 and 1866, which raised Prussia to a pinnacle of glory little anticipated, were skilfully weathered by the Bank. At the end of 1869, just half a year before the disastrous war began which overthrew the Second Empire, the capital of the Bank of France was £7,300,000; its total note issue was £55,942,312; and its loans and discounts were £31,624,652; showing an increase in the first item compared with 1850 of £3,610,000, or 97.6 per cent.; in the second item of £36,095,303, or 182.3 per cent.; and in the third item of £25,156,161, or 388.9 per cent. Compared with 1810 the increase in the first item was £3,700,000, or 102.8 per cent.; the increase in the second item was £51,803,153, or 1,263.5 per cent.; and the increase in the third item was £24,927,563, or 372.2 per cent.

Napoleon rushed madly into war with Prussia totally unprepared and utterly ignorant of the full preparedness of his foe. The consequence was inevitable The French armies were overthrown wherever they met the enemy. The principal army was shut up in Metz, and when its provisions failed had to surrender. A second army made up of very inferior units was fitted out to relieve Metz; had to fall back upon Sedan; and there the Emperor and his whole force were made prisoners. As a matter of course, the Empire fell without a blow being struck in its defence, and the Republic was declared. The management of the Bank of France in this dread period of national disaster and universal upheaval once more gave evidence of high judgment and experienced skill. Even when the Prussians were encamped on the hills overlooking Paris; when the capital itself was in the hands of the rebellious Commune; and when the Commune was being besieged by a national army, the notes of the Bank of France were readily received everywhere almost at their full face value. For a short moment there was, indeed, a depreciation of 15 per cent. But it rapidly passed off, and after a while the depreciation averaged only from ½ to 1 per cent.; while it is said that the small notes of £2 and £1 sterling never depreciated at all. It may here be mentioned that the Bank originally was not authorised to issue notes of lesser denomination than 200 francs, or £8 of our money; but that so cautious were its earlier governors that it contented itself with issuing as the note of lowest denomination 250 francs, or £10 of English money. Gradually, however, as the Bank grew in strength, increased its stock of gold and silver, and rendered great benefits to every branch of trade, it unbent. But for a long time the lowest note it issued was of the value of 100 francs, or £4 sterling. During the Second Empire, however, notes

of 50 francs, or £2, and 25 francs, or £1, were issued. From the first the Bank was a Government Bank and a bankers' bank. It always, however, rendered service to trade. But in its earlier times it looked mainly to the Government for its profits, and it rediscounted for bankers to regulate the rate of discount. As experience was gained, as its prestige rose, and as the general public came to appreciate the great services it was capable of rendering, it widened its sphere of activity. For a while it even raised capital or advanced capital to railway companies so as to hasten the equipment of France with a proper network of railways. It did not, however, permanently continue in that branch of business. But it gave greater attention to trade. It, however, did so more by discounting than by lending. France, as every reader knows, is a country of peasant proprietors, who are exceedingly hardworking, skilful, and thrifty —who are, indeed, the very backbone of the greatness of France. And every French Government since the Revolution has recognised that because of their great numbers, their conservative instincts, their industry, and their thrift, it is of the very utmost importance that their interests should be looked after. That is one of the reasons why the Bank of France has been so careful to keep its rate of discount low. It, indeed, recognises that a low rate of discount seldom changed is advantageous to every community, however it may be composed. But clearly, for the small man with little capital and dependent upon banking for assistance to an exceptional extent in his business, it is of even greater importance that the rate should be low, than it is to the wealthy capitalist. Therefore, the Bank of France maintained a low rate of discount whenever possible. Only twice in its history has it raised its rate as high as 10 per cent. And curiously enough, it was not home political revolutions that compelled it to do so, but rather difficulties that had their origin in the United States. For a very long time the Bank of France has not put its rate above 6 per cent., and very rarely has it raised it higher than 5 per cent.

If it be asked how it is that the Bank of France has been able to win so completely, as the experience of 1870 proved it had, the confidence of the whole community; to weather storms of the greatest severity, and upon the whole to keep its rate of discount lower than other great central institutions, the answer is not difficult to find. In the first place, as already said, the Bank of France is practically free to issue notes as it pleases. At the present time its actual issue is about 40 millions sterling under its possible circulation. And no doubt is entertained anywhere that if there was need the limit would be raised as it has been so often. To put the matter a little differently, the Bank is freer than other great institutions like it; and, therefore, is able to meet crises and panics with a cool head and a steady nerve. In the second place, the Bank has been fortunate in its governors. The govenor is appointed during good behaviour. He is appointed by the Government, and he can be removed by the Government. But the Government wisely very seldom does remove a governor. As a broad general rule it gives its confidence to the man it has selected, and he proves by his conduct that the confidence is well bestowed. In the third place, the Bank being well-managed and being public-spirited is careful to keep a very large gold reserve. As has been said already, it can pay either in silver or in gold. And when money becomes scarce and dear it very often does refuse to give anything but silver or its own notes to persons who are engaged in the home trade. But to persons who are engaged in the foreign trade, if they really need gold they always obtain it. The Bank is not compelled to cancel notes when it loses gold, and consequently, it can allow

gold to go on a very large scale without losing its nerve. Still, as everybody knows, the gold holdings of the Bank of France are enormous, and considering the times and the resources of the institution, they always have been enormous. One reason for that is, of course, the wisdom and experience of the governors, who soon learned that to be safe it was necessary to have a large gold reserve. The second reason is that the Bank of France keeps the ultimate banking reserve of the Government, and gold alone will serve for that. A third reason is that the Bank of France is charged with keeping the legal-tender silver coins at their mint value. It has to do so both in the interest of the State and in its own interest. Napoleon the Third dreamt of making himself head of a great Union of the peoples who speak languages derived from the Latin. To accomplish that he induced a great many of those States to enter into an arrangement with him called the Latin Union. Bimetallism was to be maintained. Silver was to be coined by each of the States in certain proportions, and so on. But it soon became evident that upon France would fall the duty of seeing that silver did not become greatly depreciated. Just before the Franco-German War the French Government was believed to be preparing for dropping the Latin Union and adopting the single gold standard. But either, like so many of Napoleon's dreams, it remained a dream or he procrastinated too long; at all events, when the war ended as it did and Germany exacted from France a war indemnity of 200 millions sterling, she seized the opportunity to get rid of her silver pieces and to adopt the single gold standard. France held at the time an immense mass of silver, and the Bank of France found that it was obliged both in the national interest and in its own to protect silver.

During the eighties the stock of silver in the Bank of France has greatly increased. But since 1895 there has been a steady reduction, and whereas in 1890 the Bank held nearly £50,000,000 of silver, the amount held at the present time is less than £15,000,000. The reduction in the stock of the metal since the war began is especially noteworthy.

The outbreak of war between France, Russia, Belgium, Servia, and England on the one side and Germany and Austria on the other found France in a very strong financial position. During the years of peace since 1871 her wealth had immensely grown, and she enjoyed a large income from foreign countries from interest and services. Unfortunately, the German army succeeded in invading the country, and came within a short distance of Paris, and, although driven

back to the Marne, it retained its occupation of one of the most important industrial districts in the East and North-East of France. The effect of this was to diminish the income of the country, and to reduce its power to meet its war expenditures. The first effect of the invasion was indeed so disturbing that the financial situation was completely upset, and it was impossible either to incur or to collect debts. In these circumstances the Government was compelled to resort to the Bank of France for the means of meeting its military expenditures, and, notwithstanding the withdrawal of the Government of France from Paris to Bordeaux, and with it the chief officers, the gold, and the securities of the Bank of France, the latter was able to provide the Government with all the money it needed for the mobilisation of the army. But for the great reputation of the Bank and the willingness of everyone to accept payment in Bank of France notes this would have been impossible, for it was not until September that public confidence was sufficiently restored to permit the Government to raise loans from investors. In a period of two months the Bank provided the Government with £84,000,000 of money. In September the Government was able to resort to the public, and began to issue short-dated securities bearing the title of Bon de la Défense Nationale and Obligation de la Défense Nationale. In all, the Government has borrowed from the Bank of France a very large part of the money it has needed to finance the war. Up to the middle of October 1915 it had obtained £289,000,000 from the Bank, which the latter was able to provide by the issue of notes. In the first fourteen-and-a-half months of war the French Government has borrowed from the Bank and from the public about £844,000,000, and the Bank has provided no less than one-third of this great sum. The assistance which the Bank of France rendered to the French nation up to the middle of October this year will be evident from the following statement of the sums borrowed by the French Government for war purposes:—

War Loans of France, July 1914 to October 14, 1915.

The great reputation and the great strength of the Bank of France have caused many persons to deposit money with it for safety, and this explains the increase in its other deposits from under £40,000,000 to about £108,000,000. In all, the liabilities of the Bank since the War began have increased no less than 8,300,000,000 francs, or £332,000,000, and from the statement below it will be seen they have nearly doubled:—

Secretary—J. H. ROSCOE.

The Bank having been formed in connection with leading Banks of the United Kingdom, Denmark, Norway, Sweden, France, Russia, &c., is exceptionally placed to transact all Banking business with these Countries on the most favourable terms.

Current Accounts opened and Deposits received for fixed periods on terms which may be ascertained on application. Telegraphic Transfers effected.

Telegraphic Addresses: Foreign, "BANKONORD, LONDON." Inland, "BANKONORD, LED, LONDON." Lieber's Code, &c., used.
Telephone: 3290 LONDON WALL (4 lines).

London Offices: 41, 43 & 47 BISHOPSGATE, E.C.

The wealth of France, the genius of its people, their thrift, the immense sums due to them from abroad as investors, the ability of the governors and regents, all go to make up the explanation for the ability of the Bank of France to obtain and retain the position she occupies in the financial world. France is the second greatest lending country in the world, and the thrift of the French people enables them to keep their purchases of goods from abroad always well within their power to pay for them, so that to obtain gold all they have to do is to refrain for a time from making new loans to foreign countries or to reduce the sums of new money they usually place abroad. By so doing they obtain power to ask for payment of their goods or their interest in the gold they need to strengthen their resources.

Between 1869 and 1880 the gold held by the Bank of France declined from £28,000,000 to £22,000,000, while the silver advanced from £22,000,000 to £49,000,000. Since then gold has risen to £186,000,000 while silver has fallen to under £15,000,000. The following statement of the stocks of gold and silver in the Bank of France is specially interesting:—

From the comparative statements of the liabilities and assets of the Bank of France since 1800 given herewith, the part played by the Bank in the economy of France will be evident. The profits of the Bank fluctuate with the rate of interest; and, as under normal circumstances the rate of interest is low, the dividend is not large, especially taking into account the relative smallness of the capital. Even in 1914 the average rate was no higher than 4.22 per cent. This rate gave gross profits of 124,663,000 francs, which enabled a dividend of nearly 20 per cent. to be paid, free of tax, after devoting 31,605,000 francs to reserve, &c. The profits earned by the Bank of France in the last 12 years, and the dividends distributed will be seen from the statement on page 312.

BANQUE INTERNATIONALE DE COMMERCE DE PETROGRAD.

Head Office: Petrograd.

Capital—
Subscribed and Paid up, 240,000 Shares of Rbls. 250... ... ... Rbls. 60,000,000

This important Russian Bank was founded in May 1869 with an authorised capital of 5,000,000 roubles, in shares of 250 roubles each, of which 100 roubles were called up. The growth of the Bank was, however, so rapid that in April 1872 the authorised capital was raised to 30,000,000 roubles. Of the first issue 150 roubles per share was called up, and of the second 100 roubles, so that the paid-up capital was 18,000,000 roubles. In 1878 it was decided to make the shares fully paid up, and thus to get rid of the uncalled liability by reducing the number from 120,000 partly-paid to 52,000 fully-paid shares. In 1895 the capital was raised to 18,000,000 roubles. By 1898 the growth of the business called for a further increase to 24,000,000 roubles. It remained at this figure until 1907, when another 12,000,000 roubles was created, of which 6,000,000 roubles were issued in 1909 and another 6,000,000 roubles in 1910. In 1911 another 12,000,000 roubles were subscribed, bringing the total to 48,000,000 roubles, and last year the capital was increased to 60,000,000 roubles. Concurrently the reserve has been built up to over 37,000,000 roubles, and the combined capital and reserve of the Bank have been raised from 2,000,000 roubles in 1870 to 97,000,000 roubles at the present time, an expansion which indicates the

vast growth in the business of this important institution, and reflects the great expansion that has taken place in the productive power of Russia.

In 1870 the total liabilities of the Bank were 20,000,000 roubles, and at the end of 1913 they reached 612,000,000 roubles, or £61,000,000. The events of 1914 brought about a diminution in deposits, but an increase in correspondents, and the liabilities of the Bank fell to 599 millions of roubles.

The Bank possesses 39 branches and 12 agencies in Russia, and 2 branches abroad—one in Paris and one in Brussels—besides the head office of the Bank in Petrograd. It transacts a large international as well as a great national business, and it has contributed in no small measure to the progress of Russian commerce in modern times. Inasmuch as the Imperial Bank of Russia is responsible for the currency of the country, the Bank of Commerce does not keep any large cash reserves. If it needs gold, silver, or notes, it has merely to discount its paper at the State Bank in order to obtain all the currency it requires. The cash held is merely the amount required for till purposes.

The situation in Russia brought about by the War was not conducive to large banking profits in 1914, and, moreover, it caused bankers to act conservatively in the matter of dividend distribution, as they were anxious, as far as possible, to make provision against the future. Consequently the dividend was reduced from 14 per cent. to 6 per cent. The profits of the Bank in recent years have been as follows:—

Profits of Banque Internationale de Commerce de Petrograd.

The great expansion in the business of the institution is shown by the comparative statements herewith of the liabilities and assets of the Bank in various years since 1870.

BANQUE NATIONALE DE BELGIQUE

When Belgium separated from Holland in 1830 there existed four banks in the country. One of them, the Société Générale, had been used as the Government Bank while Belgium was part of the Kingdom of the Netherlands, and it was found convenient by the new Government to continue so to use it. The administration of the Société Générale, however, was principally Dutch, and, rightly or wrongly, the members were accused of Dutch leanings and of a bias against Belgium. After a few years, therefore, when the Société Générale applied for a renewal of its charter, the Belgian Government offered renewal on conditions which were considered entirely too onerous by the Société. In consequence, the Belgian Government decided upon creating a Bank of its own, with the title National Bank of Belgium. Originally the capital of the Bank was fixed at 25 million francs, or a million sterling. Later the capital was doubled, and it stands at 50 million francs at present. From the first the attempt has been steadily followed to restrict the business of the Bank to purely commercial operations. It is forbidden to lend upon mortgages, or, indeed, on any securities arising out of transactions in land, and to confine discounting to bills proper. The Bank started operations in 1850. In its early days it had many trials. But it was ably and successfully managed. It was not, however, until the war between France and Germany broke out in 1870 that the goodness of the administration was tested in the most trying way. The Government, fearing that its territory would be invaded by one or other of the belligerents, lost its head to some extent. The Finance Minister insisted that the Government moneys deposited with the Bank should be transferred from Brussels, where they were supposed to be in danger, to Antwerp; and, after protests and delays, the transfer had to be effected. The Minister of Finance, further, directed his subordinates not to exchange coin for bank-notes. Moreover, the Minister of War issued an order to those under him which was considered to throw doubts upon the solvency of the Bank. In consequence, the public became alarmed, and a run upon the Bank occurred. The Bank met its difficulties bravely. It obtained cash resources in London, Amsterdam, Hamburg, and Paris, and succeeded in preventing the metallic reserve from falling below 25 per cent. of its note circulation.

In 1900 a new law was proclaimed continuing the life of the Bank until New Year's Day, 1929. The amount of the capital was not changed, but the Government was granted a larger share in the profits of the Bank than previously. In 1872 it was enacted that the note circulation of the Bank in excess of 275 million francs, or 11 millions sterling, should pay a tax at the rate of one-half of 1 per cent. per annum. In 1900 the limit of untaxed notes was left unchanged at 11 millions sterling, in spite of the increase in the circulation from about 8 millions sterling in 1870 to about 24 millions sterling in 1900. There was much discussion as to whether the Bank should not be transformed from an institution the capital of which was provided by the

BANK OF ROUMANIA, LIMITED.

7 GREAT WINCHESTER STREET, LONDON, E.C.

Head Office: LONDON. Branch: BUCAREST.

Telegraphic Address—"Bancheri, Ave, London."

Capital - - - - £300,000, fully paid up.
Reserve Funds - - £177,834.

Directors:
EARL OF BESSBOROUGH, K.P., C.V.O., C.B. The Hon. H. A. LAWRENCE.
VISCOUNT GOSCHEN. P. NAVILLE. E. W. H. BARRY.
Secretary and London Manager: H. W. A. KILGOUR.

The Bank conducts a general banking business with Roumania, and is the only banking institution with its own offices in both countries.

* August 6. † Includes coin and bullion, bills due Dec. 31, and coupons paid before due date.

public to a State Bank proper. The matter was decided in the negative. But though the Bank belongs to private shareholders it is really under the strict control of the Government. The Governor is appointed by the King for five years, and may be continued in office longer. The six directors, who, with the Governor, constitute the Administrative Council, are chosen in general meeting of the shareholders, and serve for six years. The Government exercises supervision through a Special Commissioner, whose compensation is fixed by the Government by agreement with the Bank, and who is paid by the Bank. There is also a Council of Censors, consisting of seven members, elected by the shareholders, and performing the functions of auditors and supervisors. Thus, while the members of the management are controlled by the Government, the actual day-by-day business is left largely in the hands of the Governor and the elected directors. In 1872 one of the provisions laid down was that the profits arising from a discount rate above 5 per cent. should go into the public Treasury. It is alleged that this arrangement has prevented the National Bank of Belgium from moving its rate of discount, as the Bank of England does, to protect its reserve. The Bank clearly would not profit by a high rate of discount, and, therefore, has no interest in bringing such about. Therefore it leans much more to the French practice of keeping the rate as low as possible and providing itself with the necessary metallic reserve at its own expense. However that may be, the Bank has prospered greatly during the past 40 years, and so high is its credit at home that its notes, and especially its small notes, representing 20 francs, or 16*s.* of our money, have largely taken the place of coin. Such notes in 1873 amounted on the average to a little under 35 million francs, or £1,400,000. In 1913 they averaged about 217,000,000 francs, or £8,680,000.

The Bank is authorised to issue notes payable to bearer on condition that the amount in circulation shall be represented by securities which can be easily converted into cash, the proportion between the cash reserve and the notes in circulation to be fixed by the statutes. A further article in the charter provides that the Government, by agreement with the Bank, shall determine the form of the notes, the method of their issue, and the amount of each denomination. No change was made in these respects in 1900. The Bank must redeem its notes at the head office and at the branches and agencies. But at the branches and agencies payment may be deferred until there has been time to receive the necessary funds from the head office. In 1873 the notes were declared legal tender between individuals so long as they continued to be redeemed in legal coin. It will be seen that the Belgian law imposes no limit upon the amount of notes which may be issued by the National Bank. The amount, as shown above, is settled by the statutes of the Bank, which are drawn up under the supervision of the Government. The proportion at present is fixed at one-third of the amount of notes and other obligations payable at sight. But it is provided that the cash reserve may be allowed to go below this minimum under circumstances and limits to be authorised by the Minister of Finance. The National Bank was allowed from an early date to hold first-class foreign bills as part of its reserve when guaranteed by banking houses in Belgium. The proportion of such bills to the total reserve increased steadily till just before the renewal of the charter in 1900, when they reached 25 per cent. of the total reserve. Another point which has often been debated is as to whether the National Bank has a monopoly of note issue. The answer seems to be that in practice it has such a monopoly, but not in strict law. Regarding the share of the Government in the profits of the Bank, the latter has to pay a patent tax on the gross volume of business, a stamp tax on its notes, and a tax of one-half of 1 per cent. on the excess of the circulation above 11 millions sterling. In addition, one-quarter of the profits go to the State after 4 per cent. has been distributed to the shareholders, and the State takes all profits obtained from a discount rate above 3½ per cent. The National Bank performs gratuitously the service of cashier to the Government. It bears all expenses of management, material, transportation, and transfer of funds, and shares in the expenses of the Treasury in the provinces to the

amount of 230,000 francs (£9,200) annually. The available funds of the Treasury in excess of the requirements of the service must be invested by the Bank in commercial securities, the Bank guaranteeing the securities.

Whereas in 1908 the notes in circulation were 807 million francs, on August 6 of last year, just after the outbreak of war, they amounted to 1,295 million francs. This increase in the note circulation has placed at the service of the country a large sum of money, and whereas in 1908 bills discounted were under 500,000,000 francs, in August 1914 they reached 943,000,000 francs. The expansion in the business of the Bank since 1852 will be appreciated from the statements of liabilities and assets presented herewith.

The stock of gold held by the Bank last year in August was 274,000,000 francs (£11,000,000), while in 1908 the stock was only £4,500,000. The amounts of gold and silver and total coin held by the National Bank of Belgium at various periods since 1852 are shown by the statement appended:—

* August 6, 1914, last return published.

Although the Bank has to hand over nearly 22 per cent. of its profits to the State, the amount remaining before the War was large enough to pay a handsome dividend, and for the year 1913 the distribution was as high as 17 per cent. The profitableness of the Bank's business will be evident from the statement below:—

Profits of the Banque Nationale de Belgique.

After the fall of Liége and the occupation of Brussels by the German Army early in August 1914 the Bank's officials retired to Havre with the Belgian Government, taking with them the treasure securities and note-making machinery of the Bank. Subsequently under a threat from the German Government that it would either make its *billets de réquisition* legal tender to an unlimited extent or would set up a branch of the Reichsbank as the State bank of Belgium unless arrangements were made for providing Belgium with bank-notes, an agreement was reached whereby the Société Générale de Belgium undertook the duty on behalf of the Bank of Belgium of supplying the country during the War with bank-notes, and to deposit security for the notes with the Banque

In 1904 the Federal Assembly of the Swiss Confederation, acting under the article of the Federal Constitution of 1874, passed an Act creating the Swiss National Bank. To this institution the exclusive right of issuing bank-notes is assigned. Article 2 declares the chief function of the National Bank to be to regulate the monetary circulation of the country and to facilitate the operations of payment. Furthermore, the Bank must take over the Exchequer business of the Confederation free of charge, so far as it may be called upon to do so. Previous to the passage of this Act Berne and Zurich had struggled for possession of the chief office of the Bank. The Federal Assembly, apparently unwilling to offend either city, got over the difficulty by refraining from establishing any head office. There are two principal offices, one in Berne and one in Zurich. But every Canton can insist upon the establishment of a branch of the Bank within its own territory, and the Bank is obliged to establish a branch wherever any Canton wishes. The Bank has a capital of 50 million francs, or 2 millions sterling. The Bank has its legal and administrative seat at Berne, where the general meetings of the shareholders, the meetings of the Bank council, and usually also those of the Bank committee, must be held. But the seat of the Direktorium is at Zurich. The cities of Berne and Zurich are each required to place at the disposal of the National Bank, without compensation, a suitable site for building the necessary offices, or to make an equivalent money payment. The Bank, moreover, is authorised to acquire by purchase existing banks whose business is of similar character, and, upon liquidation of such part of the business as may be unsuitable, to carry them on as branches. The share capital must be fully subscribed and half of it paid up by the day of commencing business. The payment of the remainder must follow at a date to be made known by the administration of the Bank six months in advance. According to Article 6, the capital of the National Bank was to be raised, two-fifths by the subscription of the Cantons, or, in their stead, the Cantonal banks, in proportion to their population; one-fifth was reserved for subscription by the then existing banks of issue, in proportion to their actual issue of notes on the last day of 1904. The last two-fifths, and any remainder of shares reserved to the Cantons or banks of issue and not taken up, were to be offered for public subscription. There was a long and eager fight over the proposal that the Confederation should also be allowed to subscribe. But it was finally decided that as the Confederation was to have a controlling influence over the Bank it would be illogical and unreasonable to give it an interest in the working of the Bank.

The immediate management of the Bank is vested in the Direktorium. It is composed of three members, of whom two reside at Zurich and one at Berne. The members are appointed by the Bundesrat for a period of six years. The Bundesrat chooses from among the members of the Direktorium the President and Vice-President. The departments of discount and deposit business and that of control have their seat at Zurich; the department for the issue of notes, for the management of cash holdings, and for the transaction of business for the Federal Administration and the Federal railways has its seat at Berne. In the actual management of business the several members of the Direktorium must carry out the decisions and instructions of the Direktorium. The branches of the Bank in other cities and towns are under local management. In addition, there is a general meeting of the shareholders. An ordinary general meeting must be held at least once a year. The Bank council consists of 40 members, 15 elected by the shareholders and 25 by the Bundesrat. It is charged with the general supervision of the course of business and the management of the business of the National Bank. The Bank committee consists of seven members. It is delegated by the Bank council, and exercises the detailed supervision and control of the management of the National Bank. There are local committees of the same kind. The audit commission is elected by the general meeting of shareholders. It consists of three members and three substitutes, and its business, as its name implies, is to audit the accounts. The National Bank is authorised to issue notes according to the needs of business. The manufacture, delivery, withdrawal, and destruction of bank-notes is under the control of the Federal Department of Finance. According to Article 20, the equivalent of the entire amount of notes in circulation must be in possession of the Bank in lawful money or in gold bars calculated at the market value, or in foreign gold coins, in Swiss discount bills, and drafts on foreign countries. The metallic reserve must amount to at least 40 per cent. of the notes in circulation. The bills must always bear two signatures independent of each other. The Bank is also bound to keep the equivalent of all short-time liabilities—that is, liabilities falling due within 10 days—in Swiss discount bills, in drafts on foreign countries, in lawful money, foreign gold coins, or gold bars. It is obliged to redeem its notes at par in lawful money in Berne on presentation, or at its branches and agencies within the time required to get the necessary cash from the head office. It must at all times receive its own notes at par. The charter was granted for 20 years. Of the profits, 10 per cent. up to half a million francs is transferred each year to the surplus. After this a dividend of 4 per cent. on the paid-up capital is distributed. The remainder of the net profits is divided as follows: the Cantons receive the indemnity assigned to them under Article 28; any excess still remaining is distributed, one-third to the Confederation, and two-thirds to the Cantons. The distribution among the latter is made in proportion to the population, according to the last Census.

Apart from the general disturbance of credit at the beginning of the War, Switzerland has not been greatly affected by the great European war which began in July 1914. The first effect of the catastrophe was a panic in Switzerland and a run upon the banks, a situation which caused the Government to proclaim a month's moratorium, subsequently extended to the end of September. Towards the end of September, however, the situation became more normal, partly in consequence of the creation of a Loan Bank by the Government, to assist both individuals and commerce, and it became possible to discontinue the moratorium. The hoarding that occurred at the end of July and early in August caused the note circulation of the Bank to rise from 268,000,000 francs in July to 452,000,000 francs at the end of August. It has since remained at an unusually high level, and at the beginning of the present month is still nearly 428,000,000 francs. The cash held has also greatly increased—from 199 million francs in July 1914 to 305,000,000 francs at the present time. The economic effect of the War upon Switzerland has been adverse, as it has prevented the usual influx of tourists and visitors. Nevertheless, the harvest was a good one, and,

* October 7.

The growth of the business since 1908 will be seen from the statement of liabilities and assets herewith.

Inasmuch as the greater portion of the profits are payable to the Swiss Government, dividends of only 4 per cent. have as yet been paid. The appropriation of 10 per cent. of net profit to reserve is causing the reserve fund to increase steadily. The wisdom of the Swiss Government in appropriating so much of the profit instead of devoting a large share of it to dividend and reserve may be questioned. With a dividend of not more than 4 per cent. and with its shares at a discount the Bank would be unable to issue additional capital at par. The increase in the reserve fund is not sufficiently rapid to give the Bank command of much additional capital by this means. The unduly large part of the profits of the Bank appropriated by the Swiss Government will be evident from the statement below. Doubtless some revision of the charter will be made in order that the Bank may pay a dividend large enough to permit it to raise the additional capital it will need as its business expands:—

Profits of the Banque Nationale Suisse.

The National Bank of New Zealand, Limited, issues DRAFTS and LETTERS of CREDIT, makes **Telegraphic Transfers**, opens **Current Accounts, negotiates and collects Bills of Exchange.** Receives **Deposits** of £50 and upwards for 1, 2 or 3 years at 4 per cent. per annum, and conducts every other description of banking business.

one, as its charter dates only from 1910. In that year the Russo-Asiatic Bank was formed to amalgamate the Russo-Chinese Bank and the Northern Bank. By this combination its activities were made to cover the whole of Russia—European and Asiatic—as well as China. The Russo-Chinese Bank was established in 1896, immediately after the Japan-Chinese war, to protect the interests of Russia, and devoted its attention to providing banking facilities for Russian and Chinese merchants trading between Russia in Asia and China, and consequently opened a large number of branches both in China and in Asiatic Russia. The Bank received the support both of the Russian and Chinese Governments. Indeed, the latter subscribed 5,000,000 taels to its capital and reserves. On the other hand, the Northern Bank applied its activities to promoting the trade of European Russia. Having regard to the development of Siberia and Turkestan, and the general expansion in Russian industries, the Bank's business seems likely to show indefinite expansion.

The deposits of the Russo-Chinese Bank grew in the first 10 years of its history to 161 million roubles. The political disturbances in Russia after the conclusion of the Russo-Japanese war for the time being seriously affected the progress of the Bank, as well as of other institutions, and the deposits dropped to 113 million roubles early in 1908. With the restoration of order the deposits quickly rose to nearly 184 million roubles in 1909. In 1910 the Bank was amalgamated with the Northern Bank, and the deposits of the Russo-Asiatic Bank rose to 432 million roubles. At the end of December 1913 the deposits and current accounts of the Bank were 508 million roubles.

As the Russo-Chinese Bank the institution commenced its operations with a capital of 9,000,000 roubles subscribed in Russia and 5,000,000 taels subscribed by the Government of China. In Russian money the taels were equal to 7,593.000 roubles, and, according to its first balance sheet, the paid-up capital of the Russo-Chinese Bank was 16,594,000 roubles. Including the reserves, the capital of the Russo-Chinese Bank grew to nearly 29.000,000 roubles in May 1909. The capital and reserves of the new Russo-Asiatic Bank at the end of 1913 amounted to 73,265,000 roubles.

In common with banking companies on the Continent, other than the State banks, the institution has to keep almost no cash reserves beyond that required as till money for everyday purposes; it is able to rely upon the Bank of Russia to supply it with all the currency it may need at a moment's notice. The proportion of its cash to deposits is rather more than 7 per cent., while the proportion of cash to the total assets is only 4.4 per cent. The War has not seriously affected the business of the Bank. Its deposits in 1914 only declined from 508 million roubles to 451 million roubles. On the other side of the account the loans were reduced from 340 million roubles to 249 million roubles, while the bills discounted were somewhat reduced. The importance of this Bank will be realised from the statements of liabilities and assets herewith.

We should mention that the Bank has a large number of branches in the principal cities of Russia in Europe, in Siberia, in the Caucasus, in Turkestan, and in China, while it has offices in England, France, Japan, and India. The undertaking has been a fairly profitable one if the period of political disturbance immediately succeeding the Russo-Japanese war be excluded. In 1913 the dividend distributed was 10 per cent., but in 1914 it was reduced to 5 per cent. The report for the year 1913 has not yet been issued. The profits of the Bank compare as follows:—

gress up to 1890, its growth in recent years has been even more remarkable. In 1890 its deposits had grown to $25,000,000, and in 1903 to $44,000,000, while in June 1915 they were $130,000,000. The capital needed to safeguard the fast-growing deposits has been provided almost entirely out of appropriations from profit. It is true that in 1909 the capital stock of the Company was raised to $3,000,000, but this was carried out by the payment of a special dividend of 200 per cent. upon the stock. At the end of June last the capital was $3,000,000, while the surplus and undivided profits amounted to $16,046,000, so that the capital and surplus together reach $19,000,000 and represent a proportion of 12.6 per cent. of the total liabilities. The Bank is a member of the New York Bankers' Clearing House, and its proportion of cash to deposits at the end of June was nearly 33 per cent. Just over one-half of its funds is at the present time employed in loans and in the discount of bills. The fall in the prices of securities in recent years has caused it to write off considerable sums out of profits in respect of depreciation; nevertheless its profits have still been very great. A few years ago dividends of 80 per cent. were paid on the capital of $1,000,000, and since the capital was raised to $3,000,000 by the payment of a 200 per cent. dividend the distribution has been maintained at 45 per cent. to 50 per cent. In other words, had the large bonus dividend not been paid the profit now distributed would be equal to a dividend of no less than 150

* 235 per cent. was paid on the old capital of $1,000,000, and 27 per cent. on the new capital of $3,000,000.
† Written off for depreciation.

The strength of the institution and the growth of its business will be realised from the statement of the liabilities and assets given herewith.

A trust company in the United States is, of course, both a bank and a trustee. The success of the trust companies has, indeed, been so great that power has been given to the National Banks under the new law to act as trustees, executors, administrators, or registrars of stocks and bonds, so that this fundamental difference between the trust companies and the National Banks has now disappeared.

The Company is the trustee of many railroad mortgages and of many large estates, and was chosen by the Government in 1913 to conduct the sale and distribution of the Southern Pacific stock held by the Union Pacific Railroad Company.

CHASE NATIONAL BANK
(OF NEW YORK)

Office: Adams Building, 57 Broadway, New York City.

Capital—
Subscribed and Paid up, 50,000 Shares of $100 each $5,000,000
Price per Share, $537½. *Dividend*, 20%. *Yield*, 3·75%.

THE Chase National Bank ranks, indisputably, among the leading financial institutions of New York, and were it not that the laws of the United States do not permit the National Banks to open branches at home it would undoubtedly be one of the greatest banks in the world. It was organised in 1877, having begun business in December of that year, and has prospered from the start.

An important change in the management took place in October 1886, when control of the Bank passed into the hands of Messrs. Henry W. Cannon, John G. Moore, Edward Tuck, Calvin S. Brice, and General Samuel Thomas. Mr. James J. Hill shortly after entered the directorate of the Bank. On July 1, 1887, the new management increased the capital from $300,000 to $500,000, the new stock being paid for at the book value of the old, viz. 180. In December 1897 the capital was further increased from $500,000 to $1,000,000, a cash dividend of $500,000 being paid at the same time. Again in December 1906 the capital was increased $4,000,000, making it $5,000,000, and coincident with this increase a cash dividend of 400 per cent. was declared, the dividend thus equalling the increase in the capital. While altogether the stockholders of the Bank have paid in $660,000 on account of capital, the paid-in capital has been increased by the earnings of the Bank, in the form of capital, surplus and undivided profits, nearly $14,000,000. The enlargement of the capital equipment to keep pace with the rise in deposits affords an evidence of a due recognition of one of the most necessary requisites of prudent and efficient banking.

Among the National Bank members of the New York Clearing House Association the Chase National Bank ranks third in point of net deposits. The Bank not only holds large individual deposits, but has long been notable for its numerous bank correspondents in all parts of the country.

The foundations of the Bank's success were carefully laid by its organisers. For many years its official head has been the Hon. A. Barton Hepburn, a man whose financial judgment is widely sought and as widely respected. He is an authority not only on banking itself, but on all those matters where commerce and finance come into touch with banking, and is invariably consulted and looked to for leadership. Between 1890 and 1900 the deposits of the Bank grew from $13,000,000 to $51,000,000. In the following 10 years they rose to $98,000,000, and at the present time reach $211,000,000. The funds thus obtained have been employed mainly in loans to

customers, which between 1890 and 1900 grew from $5,000,000 to $22,000,000, and now reach $88,585,000.

Last year, in consequence of the outbreak of war, of the severe trade depression, and of the transfer of banking reserves to the Federal Reserve banks, the deposits of the New York banks at the end of the year were somewhat heavily reduced; but in the current year the great demand for American goods for export has brought pronounced recovery, and in the past twelve months to September 1915 the deposits of the Chase National have grown from under $124,000,000 to no less than $211,000,000. The strength of the institution will be evident from the statements and liabilities and assets herewith.

Although it has power to issue notes based upon the deposit of Government bonds, it has not availed itself of the privilege to any appreciable extent and has now less than $500,000 of notes outstanding. The rapid growth in the business means that from time to time additional amounts of capital will be needed, and that shareholders will participate in the continued well-being of the institution, not merely by reason of the dividends they will receive on their existing capital, but from their ability to invest additional capital at profitable rates of interest. In consequence of the capital having been raised from $1,000,000 to $5,000,000 in 1906 by the distribution of a bonus dividend of 400 per cent., the rate of dividend declined to 6 per cent. in 1907-08, from which it rose to 12 per cent. in 1909, and since 1910 has been at the rate of 20 per cent.

The profitable character of the business is shown by the following statement:—

This great French Bank was founded during the Revolutionary crisis in France in 1848. The political troubles which then broke out impaired both public and private credit, and a run on the Bank of France brought about the suspension of specie payments. The necessity of providing credit facilities at that time compelled the Government to provide loan facilities to carry on the everyday trade of the country. Louis Philippe abdicated towards the end of February 1848, and on March 7 a decree was issued authorising the creation of banks of discount in the industrial and commercial towns. This was followed by a second decree, dated March 8, signed by all the members of the Provisional Government, establishing the Comptoir National d'Escompte de la Ville de Paris with a guaranteed capital of 20 million francs, of which one-third was to be in shares subscribed by the public, one-third was to be guaranteed by the City of Paris, and one-third was to be guaranteed by the Government of France. All the strongest elements in France, including the Chamber of Notaries, benefit societies, &c., assisted in providing the initial capital, and on March 18, 1848, the Bank commenced its operations with a paid-up capital of 1,587,021 francs in respect of the 6,666,500 francs of capital subscribed by shareholders, plus 1,000,000 francs received from the Treasury. With these small resources the Bank in 12 days, between March 18 and 31, discounted bills amounting to 13,402,167 francs.

A Council of Discount of 60 members, comprising the leading merchants and manufacturers, scrutinised the bills presented for discount by the public. This body is still maintained and has very largely contributed to the development and reputation of the Comptoir; indeed, the post of councillor is regarded as a great honour by business men. In 1853 the authorised share capital was raised from 6,666,500 francs to 20,000,000 francs, and as by that time the Bank had become a strong corporation, it decided to relinquish the State guarantee. Consequently its title was changed to the Comptoir d'Escompte de Paris, and by Imperial decree its life was fixed at 30 years, which period has been extended from time to time. Notwithstanding the abandonment of the Government subsidy the names of the directors appointed by the shareholders had still to be submitted to the Minister of Finance for his approval. The influence and importance of the Bank continued to expand rapidly after its change of name, and it assisted in the issue of many loans for the Government, for the City of Paris, and for French railway companies, as well as in the formation of a large number of industrial joint-stock enterprises. The activities of the Bank were not confined to France, and as a result of the policy of expansion which animated the Imperial Government, and which caused the latter to conclude a number of commercial treaties, the Bank created many agencies abroad—at Shanghai and at Calcutta (1860), Réunion (1861), Bombay, Hong Kong and Saigon (1862), London and Yokohama (1867), and Alexandria

* Including Advances on Securities.

(1869). Moreover, it assisted in the formation of colonial banks at Guadeloupe, Martinique, Réunion, and later on at Guyane and Sénégal, and was officially designated by the Government as correspondent to these institutions. After increasing its capital from 40 to 80 million francs and the reserve to 20 million francs in 1866, the Comptoir founded agencies at Nantes (1867), Lyon (1868), and Marseille (1869), in order to provide French commerce and industry with banking facilities in its dealings with French colonies and with foreign countries. The Bank passed through the Franco-German war without the least difficulty, in spite of the demand upon it for deposits and the offer to it of exceptionally large amounts of bills. In a single week it paid off 70 million francs of deposits. Immediately it became known that the German Army was advancing on Paris it sent a large part of its *personnel* and bills in its portfolio to Nantes, and at the same time despatched to its agency in London its foreign securities, and established in London a department for dealing with its correspondents abroad and its branch establishments in the Far East. In October 1871 the Bank was authorised to issue 5-franc notes for account of a syndicate, comprising nine banks; and these notes were freely taken in all parts of France. Furthermore, it rendered valuable assistance to the State when the French indemnity loan of three milliards of francs was offered for subscription. It was instrumental in obtaining subscriptions from 15,000 persons for 1,200 million francs, and it participated in the work of remitting the war indemnity to Germany. Towards the close of the seventies it opened agencies in Australia and in the United States, and participated in many important loan transactions, including the unification and conversion of the Egyptian Debt. Unfortunately, in 1887 the Bank began to finance the Société des Métaux, which by means of the advances it obtained from the Comptoir attempted to create a corner in copper. The knowledge that the Bank was financing the copper syndicate caused a run to be made upon it, and in two days 70 million francs of deposits were withdrawn.

Fortunately the Bank of France came forward and lent the Comptoir 140,000,000 francs on the security of commercial paper and securities. It was then decided to liquidate the Comptoir d'Escompte de Paris, and to initiate a new Company with the old title of the Comptoir National d'Escompte de Paris. The liquidation of the Bank was not unfavourable to the shareholders, the whole of the depositors and other creditors of the institution having been paid in full, and important distributions having been made to the shareholders, either in cash or securities. It is calculated that shareholders who subscribed for the new shares in the new Bank that was formed to take over the goodwill of the older institution have fully recovered their money, taking into account the premium on the new shares for which they subscribed.

The new institution was created on May 2, 1889, with an authorised capital of 40,000,000 francs. The first issue of 80,000 shares of 500 francs each took place on May 15, 1889, and was fully subscribed by the shareholders of the Bank. Since that date the progress of the institution has been rapid. At the end of 1889 its paid-up capital was 30,000,000 francs, from which it rose in the following year to 40,000,000 francs; soon after it was increased to 100,000,000 francs, from which it has now risen to 200,000,000 francs. Since 1889 the reserve has been substantially increased, partly out of premiums on new shares, and at the end of last year amounted to 44,154,000 francs. The total capital and reserve is therefore 244,154,000 francs, a sum which represents over 18 per cent. of the total liabilities. The deposits grew from 147,000,000 francs in 1889 to no less than 1,413,000,000 francs at the end of 1913. Over two-thirds are employed in the discount of bills, the bill portfolio at the end of 1913 amounting to nearly 1,100,000,000 francs. Beyond this the Bank had made advances on securities to the extent of 201,000,000 francs.

In consequence of the War the position of the Bank at the end of 1914 was greatly modified in comparison with its position at the end of the previous year. The trade of France was greatly curtailed, and business was conducted on a cash basis. This situation caused a great demand for the notes of the Bank of France, and gave the Government the power to meet a large part of its war expenses by the issue of

notes. At the same time, however, it curtailed the normal business of the great joint-stock banks of France, and the acceptances of the Comptoir declined from 175,000,000 francs to only 32,000,000 francs. Furthermore, a great many people were compelled to live upon their bank balances, and the deposits of the joint-stock banks were substantially reduced. The deposits and current accounts of the Comptoir were reduced during the year from 1,414,000,000 francs to 1,040,000,000 francs, or by 27 per cent. With the improved political and financial situation of the current year the position of the banks has somewhat recovered, and their deposits are now higher than at the end of December. The disposition to make cash payments in France, which is the usual effect of great Government expenditures, is reflected in the reduction in the bill case of the Comptoir. At the end of 1913 the bills receivable amounted to 1,004,000,000 francs; at the end of 1914 they were only 355,000,000 francs; and although the amount at the end of August increased to 587,000,000 francs, this was less than 60 per cent. of normal. In ordinary times the joint-stock banks rely for cash entirely upon the Bank of France, apart altogether from a relatively small amount of till-money that can be used for everyday purposes. The War with its vicissitudes has caused them to modify this practice, and at the end of last year the Comptoir held 386,000,000 francs in cash, against only 124,000,000 francs in cash at the end of 1913. At the end of August last the amount of cash held was 407,000,000 francs, representing 28 per cent. of the total assets, and 37 per cent. of the deposit liabilities. The position of the Bank at the end of August was as follows:—

Position of Comptoir Nationale d'Escompte de Paris, August 31, 1915.

LIABILITIES.	Fr.	ASSETS.	Fr.
Capital	200,000,000	Cash in hand	407,086,000
Reserve...	41,690,000	Investments	15,270,000

		Acceptances	32,100,000
		Bank premises ...	15,842,000
Total liabilities ...	1,467,496,000	Total assets	1,467,496,000

The great expansion in the business of the Comptoir since its organisation in 1889 will be evident from the statements of liabilities and assets herewith.

In 1912-13 its profits were large enough to pay a dividend of 8 per cent. upon its shares after appropriating substantial sums for reserve. Last year in consequence of the War the profit declined, and the dividend was reduced from 8 to 5 per cent. With the improving financial situation in France, and the recovery in its position, the profit in the current year will show improvement, and a higher dividend may be distributed. The profits in recent years have been as follows:—

Profits of the Comptoir National d'Escompte de Paris.

CONTINENTAL AND COMMERCIAL NATIONAL BANK OF CHICAGO.

Office: Chicago, Ill., U.S.A.

Capital—
Subscribed and Paid up, 215,000 Shares of $100, fully paid $21,500,000
Price, $268. *Dividend*, 12%. *Yield*, 4.5%.

The Continental and Commercial National Bank as it is now constituted was formed by the amalgamation in August 1910 of the Continental National Bank and the Commercial National Bank. The latter was much the older institution of the two, having been organised in 1864 with a capital of $200,000. At the time of the amalgamation the capital of the Commercial National was $8,000,000 and its deposits $72,887,000. The Continental National Bank was organised in 1883 with a capital of $2,000,000, and at the time of its fusion with the Commercial National in 1910 its capital was $9,000,000 and its deposits amounted to $98,259,000. The capital of the combined enterprise was placed at $20,000,000, of which $10,800,000 was allotted to the shareholders of the Continental and $9,200,000 to the shareholders of the Commercial National. The latter, however, had to pay $200 per share for the additional $1,200,000 of stock allotted to them in order to equalise the book value of the two institutions, which was fixed at $165 per share. In 1912 the capital was increased to $21,500,000, and the deposits rose to $187,000,000. In 1913 and 1914 in consequence of the trade reaction, the deposits declined to $175,000,000; but the renewed prosperity which returned to Chicago through the purchases of food products for the Allied Powers brought a fresh expansion to $192,000,000 at the end of June last. The importance of the institution as at present constituted is shown by the statement of liabilities and assets herewith.

The particulars prior to 1911 are those of the Continental National Bank alone, and do not include the assets and liabilities of the Commercial National Bank,

THE NATIONAL BANK OF SCOTLAND LIMITED.
INCORPORATED BY ROYAL CHARTER AND ACT OF PARLIAMENT.
ESTABLISHED 1825.
Capital Subscribed, £5,000,000. Paid up, £1,000,000. Uncalled, £4,000,000.
RESERVE FUND, £900,000.
Head Office—EDINBURGH.
J. S. COCKBURN, General Manager. GEORGE B. HART, Secretary.
London Office—37 NICHOLAS LANE, LOMBARD ST., E.C.
J. FERGUSON, Manager. DUGALD SMITH, Assistant Manager.
Every description of banking business transacted, including the purchase and sale of Stocks, Shares, Securities, &c.; the collection of Dividends and Coupons whether payable in Great Britain or abroad; the issue of Drafts, Letters of Credit, and Circular Notes payable in the principal Cities and Towns throughout the World; and Cable transfer of remittances to all parts.
The Agency of Colonial and Foreign Banks is undertaken, and the Acceptances of Customers residing in the Colonies or elsewhere abroad domiciled in London are retired on terms which will be furnished on application.
The Officers of the Bank are bound to secrecy as regards the transactions of its customers.

which was then absorbed. To show the progress made by the latter prior to its absorption we give the following statement of its capital and deposits since 1867:—

Capital and Deposits of the Commercial National Bank, 1867-1910.

Jan. 1	Capital Stock. $	Deposits. $
1910	8,000,000	71,791,707
1905	2,000,000	34,819,001
1902	2,000,000	25,978,874
1897	1,000,000	7,267,134
1892	1,000,000	8,566,429
1887	1,000,000	5,754,906
1882	500,000	5,614,505
1877	500,000	2,048,626
1872	500,000	1,793,102
1867	250,000	590,358

In part the business of the Commercial National was built up by the absorption of the Bankers' National Bank in 1909, which increased its capital from $3,000,000 to $7,000,000. This was the only bank absorbed by that institution. The Continental National Bank purchased several institutions:—the Globe National Bank in 1898, with deposits of $2,500,000, and the National Bank of North America in 1904, with deposits of $14,000,000. In August 1911 the Hibernian Banking Association of Chicago was purchased by the consolidated Bank, but the individual existence of this Company has been maintained, and it now possesses deposits of $28,000,000. The deposits of the Hibernian Banking Association,

Liabilities of The Continental and Commercial National Bank of Chicago.

1891, Dec. 31	222,000	2,930,180
1886, Dec. 31	111,000	1,946,302
1881, Dec. 31	111,000	1,401,108
1876, Dec. 31	111,000	674,558
1871, Dec. 31	111,000	640,759
1867, Nov.	111,000	129,441

The stockholders of the Continental and Commercial National Bank also own the stock of the Continental and Commercial Trust and Savings Bank, an affiliated institution, for the purpose of enabling the Bank to compete with the savings banks for long-term deposits, and to permit it to compete with the trust companies in respect of trust business. The present institution was formed by the consolidation of the American Trust and Savings Bank and the Commercial Trust and Savings Bank. This savings bank institution now possesses a paid-up capital of $3,000,000, a surplus of nearly $2,000,000, and nearly $32,000,000 of deposits. It should be understood, of course, that the Trust and Savings Bank, although a subsidiary of the National Bank, is not a part of that institution, nor is the National Bank legally responsible for the deposits. Nevertheless, from a practical point of view the two institutions are one, as the credit of the one is dependent on the credit of the other. Therefore any statement of the liabilities and assets of the Continental and Commercial National Bank would not be complete without statements of the liabilities and assets of the affiliated Trust and Savings Bank.

The profits of the institution have substantially increased since the Continental and Commercial were consolidated. In 1914 the total profit earned was $3,580,000, equal to a dividend of nearly 17 per cent., and after the payment of a dividend of 9.23 per cent. the undivided balance amounted to $1,596,000. The profits and dividends distributed since 1904 have been as follows:—

Profits of the Continental and Commercial National Bank since 1904.

Year.	Net Profits.	Dividends. Amount.	Rate.	Balance.
	$	$	%	$
1914†	3,580,392	1,983,600	9·23‡	1,596,792

It would be difficult to exaggerate the services which the great French banks have rendered to the people of France. In no other country is wealth so evenly distributed as in France, and in no other country can it be said that everyone is not only a consumer or producer, but capitalist also. The existing great wealth of France is made up mainly of the small savings of a vast number of persons, and in the work of increasing the wealth of everyone the great banks have played a leading part. The manner in which the wealth of the country has become more evenly distributed from period to period is exemplified by the number of persons who have become *rentiers*. Notwithstanding an immense increase in the debt of France during the past century, there has been a steady decline in the amount of the debt held per person. In the work of enabling the democracy of France to effect savings and to increase their wealth as well as their income the great banks have very largely participated. Prior to the formation of the great joint-stock banks the rate of interest in France was relatively high, whereas since their formation it has become much lower. In the 20 years from 1847 to 1866 the averagge open-market rate of discount in France was at least 5 per cent., while in the 20 years from 1890 to 1909 the average rate of discount was no more than 2.27 per cent., or less than one-half the rate of interest before the days of joint-stock banking. In the old days, moreover, it was possible only for relatively rich men to obtain loan facilities. In these

days everyone in good reputation can discount their bills either at the Bank of France or with the joint-stock banks for relatively insignificant sums. Furthermore, the banks not only take care of the cash balances of the French people, but make themselves responsible for their investments, and almost the whole of the money invested by the French public is placed on the advice of bankers. When great borrowers apply to France for a loan they deal with the French public entirely through the banks. By examining the accounts of their customers bankers know whether they want to invest or not, and they endeavour to have stocks or bonds to offer to them as they require them. When a bank recommends its customers to invest their money in a given security they rarely or never reject the advice. It is possible, therefore, for the French bankers to take large loans and to place them with the public within a few days.

The greatest of the joint-stock banks of France is the Crédit Lyonnais, which was formed at Lyons in 1863 under the Joint Stock Companies Act, and transformed in 1872 into a société anonyme under the Law of 1867. Originally the life of the Bank was placed at only 30 years, but this period has been extended from time to time, and at present the Bank is not due to expire until 1960; but its duration may always be extended by a vote of the shareholders. The original capital was 20,000,000 francs, of which 8,000,000 francs were paid up. In 1872 the capital was increased to 50,000,000 francs, in shares of 500 francs each, of which 250 francs were paid up. In 1875 the subscribed capital was raised to 75,000,000 francs. In 1879 it was further increased to 100,000,000 francs by the issue of 50,000 shares of 500 francs at the price of 625 francs, the amount paid up apart from the premium being 250 francs; and in 1881 it was raised to 200,000,000 francs, the new shares being issued at 750 francs per 500 francs, with 250 francs paid. The subscribed capital remained at this figure until 1900, when it was increased to 250,000,000 francs, the price of issue being 925 francs per 500-franc share. In 1894 it was decided to call up the unpaid capital of 250 francs per share in five instalments of 50 francs each, extended into 1896. The subscribed and paid-up capital has remained at 250,000,000 francs since 1896. The reserve fund has been accumulated partly out of profits and partly out of premiums on new shares. In 1900 the reserve amounted to 100,000,000 francs, and it has since been increased to 175,000,000 francs entirely out of profits. At the present time the paid-up capital and reserve amount to the great sum of 425,000,000 francs.

To give a description of all the work the Bank has performed for France would call for a history of the French Money market since 1863. The Banque d'Etat has supplied the French people with all the currency they have needed, and has stood behind the great joint-stock banks in providing them with whatever cash they required at all times; while the Crédit Lyonnais has supplied the French people with a large part of the great quantity of securities in which they have placed their savings for the past 50 years, and at the same time has taken care of a large part of their cash balances, as well as providing them with the temporary loans they required from time to time, either for the purchase of goods or securities. The Bank does not lend on the security of land or houses; that duty it leaves to the Crédit Foncier, which raises its funds by the issue of long-term bonds, and not by deposits liable to call at any time. The Crédit Lyonnais employs the greater portion of its funds in the discount of bills which have an average maturity of 55 to 60 days, the average maturity of the bills held at any given moment being about 45 days. Should the Bank need a large amount of cash at any time it has merely to take its bills for discount to the Bank of France to be supplied with all the money it needs. The progress of the Bank has been very rapid, and in 1864 it extended its operations from Lyons to Paris; in 1865 to Marseilles; in 1873 to Saint-Etienne; and in 1871 it founded its agency in London. The number of its offices and branches has grown with the extension of banking in France, and whereas in 1865 it had only three offices, and in 1885 no more than 100, it had 200 in 1899, and it has now over 400 offices and agencies at home and abroad. The expansion of its business has been, indeed, incredibly great. In 1863 its deposits and current accounts were 14,000,000

francs; by 1880 they had grown to 412,000,000 francs; by 1890 to 681,000,000 francs; by 1900 they increased to 1,192,000,000 francs; and at the end of 1913 they were no less than 2,235,000,000 francs.

The great War that began at the end of July last year has seriously reduced the income of the French nation, and has diminished the deposits of French bankers. In the first place, a considerable portion of the industrial section of France is occupied by the enemy forces; secondly, the large income which France enjoys from the expenditures of tourists has almost entirely ceased; and, thirdly, her income from interest on capital invested abroad, and especially in Russia, has been reduced because of the closing of the Dardanelles, which prevents Russia from exporting produce in any appreciable amount. In these circumstances it has been necessary for many people in France to draw upon their balances with bankers in order to live, and there has been a heavy reduction in the deposits of the joint-stock banks. At the end of December last the deposits and current accounts of the Crédit Lyonnais had been reduced to 1,797,000,000 francs, whereas a year previously they stood at 2,235,000,000 francs. There was thus a decline of over 400,000,000 francs, or about 20 per cent. Since the end of December, however, both the military and financial situations have improved, and the deposits of the Crédit Lyonnais have recovered to 1,930,000,000 francs. The desire for cash payments in these days brought about a reduction in bills receivable from 1,518,000,000 francs at the end of 1913 to 653,000,000 francs in December 1914. According to the statement at the end of August last the Bank had placed a substantial amount of its unemployed funds in French Treasury bills, and the total amount of its bills had thus increased to 920,000,000 francs. In consequence of so many bills having been paid off the cash holding of the Bank is very largely increased. At the end of 1913 no more than 174,000,000 francs of cash was held, but at the end of August this year the cash reached 806,000,000 francs, equal to over 44 per cent. of the deposits, against a normal 7 per cent. The vast growth in the Society's business since 1863, and the effect of the War upon its position, will be evident from the statement of assets and liabilities herewith.

The position of the Bank at the end of August last is as follows:—

Position of Credit Lyonnais, August 31, 1915.

LIABILITIES.	Fr.	ASSETS.	Fr.
Capital	250,000,000	Cash in hand, &c. ...	806,411,000

Total	2,445,852,000	Total	2,445,852,000

Normally its profits are very large, and in recent years have been equal to a return of about 17 per cent. upon its capital, and the dividend upon the shares in 1912 and 1913 was 13 per cent. Last year the profit was, of course, small; nevertheless, it was sufficient to induce the directors to distribute a dividend of 5 per cent. and to carry forward an undivided balance of nearly 19,000,000 francs.

The profits in recent years have been as follows:—

Profits of the Crédit Lyonnais.

Year to Dec. 31	Net Profit. Frs.	—Dividend.— Amount. Frs.	Rate. %	Balance. Frs.	Special Appropriations. Frs.	Carried Forward. Frs.

CREDITO ITALIANO.

Head Office: Milan, Italy.

London Branch: 22 Abchurch Lane, E.C.

Capital—

Subscribed and Paid up, 150,000 Shares of 500 Lire, fully paid ... ... Lire 75,000,000

The Credito Italiano came into existence at the end of 1894 as a transformation of the old Bank of Genoa, which was founded in 1870. The institution has largely participated and assisted in the great commercial and industrial progress of Italy in recent years, and it has opened up a considerable number of branches in the chief cities, including a branch in London. The initial capital was 14,000,000 lire, a sum that was fully sufficient at that time, but the rapid growth of the business has rendered essential successive increases. In 1899 the capital was raised to 25,000,000 lire, in 1900 to 30,000,000 lire, in 1901 to 35,000,000 lire, in 1904 to 50,000,000 lire, and in 1907 to 75,000,000 lire. Between 1902 and 1906 the deposits grew from 24,000,000 lire to 104,000,000 lire, and since 1906 they further increased to no less than 206,000,000 lire at the end of 1913. In 1914, owing to the War, the deposits were reduced to 167,000,000 lire, while obligations to correspondents jumped up from 244,000,000 lire to 283,000,000 lire.

At the end of December, beyond the paid-up capital of 75,000,000 lire, the reserve was 11,000,000 lire, so that its total capital and reserve was 86,000,000 lire. This sum was equal to 14.1 per cent. of the total assets.

Since 1908 dividends have been maintained at 6 per cent., and substantial sums have been set aside for reserve. In 1914 the gross profit amounted to 22,000,000 lire and the net profit to 5,000,000 lire.

SHEFFIELD BANKING COMPANY LIMITED.

ESTABLISHED 1831.

SUBSCRIBED CAPITAL - £1,154,500.
Paid-up Capital, £404,075. Reserve Fund, £295,925.

DIRECTORS.

SAMUEL ROBERTS, Esq., M.P., Chairman. WILLIAM B. ESAM, Esq., J.P.
FREDERICK FOWLER, Esq. FREDERICK C. WILD, Esq., J.P. HENRY H. BEDFORD, Esq., J.P.

Head Office - - GEORGE STREET, SHEFFIELD.
Manager: ERNEST G. WRAGG.

BRANCHES.—The Bank has eleven Offices in Sheffield; also Branches at Barnsley, Chesterfield, Conisborough, Doncaster, Gainsborough, Mexborough, Rotherham, Swinton, Worksop, and in the surrounding districts.

The Bank has Agents and Correspondents in all parts of the world, and provides Circular Letters of Credit, Circular Notes and Drafts for the use of Travellers abroad.
Current, Deposit and Savings Accounts opened, and every kind of Banking business transacted at Head Office and Branches.
For the convenience of Customers, moneys may be paid in at any of the Branches or through Agents for their credit.
The Bank is prepared to act as Executor, Trustee, &c. The conditions may be ascertained on application to the Head Office.

DARMSTÄDTER BANK.

(BANK FÜR HANDEL UND INDUSTRIE.)

Head Offices: Berlin and Darmstadt (Germany).

Capital—

Subscribed and Paid up in 158,203 Shares of 1,000 marks and 4,193 of 250 florins, fully paid (no further liability) ... ... M. 160,000,000

Price of Shares, 100. *Dividend*, 4%. *Yield*, £4%.

This Bank was founded in Darmstadt in 1853, and since the formation of United Germany has become one of the great banks of the German Empire, with branches and agencies in nearly every German town of importance. In common with the other German banks it has been instrumental in raising large sums of money from the public for the promotion of banking, industry, and commerce. Its most noteworthy promotions have been banks which operate in Holland, in China, in Italy, in Brussels, and in Roumania. In these banks the Darmstädter possesses an important share interest. Originally its authorised capital was only 10,000,000 gulden, of which 40 per cent. was paid up, but with the opening of the Berlin branch in 1871 the capital was increased to 35,000,000 gulden, equal to 60,000,000 marks. In consequence of the great expansion in business that has since occurred the capital was increased in 1889, in 1898, in 1902, in 1904, and in 1910, until at present the subscribed and paid-up capital is 160,000,000 marks, or £8,000,000. In consequence of this increase of capital the growth in the reserve fund has been slow, and at the present time amounts to 32,000,000 marks. From its earliest days the founders of the institution contemplated the extension of its sphere of influence far beyond the walls of Darmstadt, and as early as 1854 appointed an agent in Frankfort, and in 1864 opened a branch office in that city, which was then the leading Money market of the country. The after-effects of the war with France severely affected the business of the Bank, and the deposits of the institution did not recover to the level at which they had stood in 1870 for more than 20 years. Indeed, the great expansion in the business of the Bank has occurred only with the absorption of a large number of other institutions in recent years. As recently as 1900 its deposits and current accounts were no more than 74,500,000 marks. In the five years to 1905 they rose to 296,000,000 marks, and at the end of last year they were 592,000,000 marks, scarcely a year having passed since 1900 in which the Bank has not absorbed several other institutions. The statement of its liabilities and assets is given herewith. Its capital and reserve fund represent 19.4 per cent. of its total liabilities. Its total resources amount to 990,000,000 marks, or about £50,000,000. The Bank does not need to keep any very large amount of cash in its vaults, as it can always supplement its till money with additional cash obtained from the Imperial Bank, upon which is thrown the task of supplying the country with currency. The Bank's investments last December were 110,000,000 marks; its bills were 175,000,000 marks; its advances were 115,000,000 marks; and its loans on current account were 310,000,000 marks. Its acceptances amounted to the substantial total of 199,000,000 marks.

The largeness of its capital has interfered in some measure with high rates of dividend. In 1913 the rate of dividend was 6½, but owing to the War its net profit in 1914 fell from 10,404,000 marks to 6,400,000 marks, and its dividend declined to 4 per cent. The sum distributed in dividend closely corresponds to the profit earned. The net profits of the institution and the dividends paid since 1903 will be seen from the statement appended:—

Not only does the Deutsche Bank possess branches in all the principal towns of Germany, but it has formed daughter banks or allied institutions which operate in nearly every country, more especially in the United States, Mexico, Central America, South America, East Africa, and Asia, as well as in Italy. Furthermore, it has a large stockholding in a number of other German banks. Indeed, its ramifications are so great that to give even a list of the banks with which it is intimately connected and the firms that have been absorbed into what is known as the "Deutsche Bank Group" would occupy a large amount of space. Suffice it to say that the Bank was formed for the express purpose of furthering and promoting German trade and commerce in all parts of the world. The Bank does not merely perform the functions of an ordinary bank; it is a promoter of enterprises on a great scale, its method being to acquire concessions or to purchase properties, and to work or develop them up to the point at which the public can be invited to subscribe the necessary capital.

From 15,000,000 marks in 1870 the capital was increased in the following year to 30,000,000 marks, and in 1873 to 45,000,000 marks. The depression in trade and the losses which then fell upon German traders and bankers prevented any substantial expansion in the Bank's business until about the year 1879, when world events took another turn for the better. In 1881-82 the capital was raised to 60,000,000 marks, and by 1888 the expansion in the business called for another increase to 75,000,000 marks. For the first 25 years of its existence, however, the growth of its business was relatively slow in comparison with the enormous expansion that has taken place in the last 17 years. In 1895 and 1896 the capital was increased

° Including acceptances, for amount of which see contra.

to 100,000,000 marks; in 1897 to 150,000,000 marks; in 1902 there was another increase to 160,000,000 marks; in 1904 to 180,000,000 marks; in 1906 to 200,000,000 marks; and in 1914 it was raised to 250,000,000 marks. The rapidity of the growth of the business is reflected by the expansion in deposits. At the end of 1871 the deposits were 27,000,000 marks; by 1876 they had grown to 96,000,000 marks. Then the collapse of business and the depression in trade caused a reaction to 41,000,000 marks in 1877, and it was not until 1883 that the deposits again exceeded the 1876 level. During the eighties they grew from 64,000,000 marks to 218,000,000 marks. The trade depression and lack of confidence in the early nineties then affected business, and in 1896 the deposits were still no greater than 287,000,000 marks. It will be recollected that in 1899 Great Britain was engaged in war in South Africa, and that during the period the British Money market was almost closed to the demands for capital for foreign countries. It was in this period the German people greatly extended their banking facilities and their loans to foreign countries. Between 1898 and 1902 the deposits of the Deutsche grew from 444,000,000 marks to 720,000,000 marks, and since then they have continued to expand, until at the end of 1914 they reached 2,042,000,000 marks, or £102,000,000.

Partly by means of the premiums received on new issues of capital, and partly by the appropriation of profits, the reserve fund has been increased, until at the present time it amounts to 178,000,000 marks. When the new capital recently authorised has been placed the total capital and reserve will amount to 365,000,000 marks. The paid-up capital and reserve at the end of December last was 312,500,000 marks. The German joint-stock banks do not need to hold any large amount of cash in their vaults other than that required to meet their daily needs, as at all times the Reichsbank is prepared to provide currency for the country. Nevertheless, the amount of cash held by the Deutsche Bank, in hand and at bankers, at the end of last year amounted to 357,000,000 marks, equal to about 13 per cent. of its total assets. The Bank's investments were 172,000,000 marks.

The total liabilities and assets of this, the greatest of the German banks, are set out herewith.

The business of the institution is a profitable one. Its total income last year was over 74,000,000 marks, and its net profit was nearly 37,000,000 marks, equal to a dividend upon the stock of nearly 15 per cent. The dividend distributed on the increased capital was reduced to 10 per cent. The profits and income of the Bank since 1904 have been as follows:—

Profits of the Deutsche Bank.

In addition to the Ordinary shareholders there are seven acting partners, whose liability is unlimited.

Price of Shares, 176%. *Dividend*, 8%. *Yield*, 4.55%.

THE Disconto-Gesellschaft in Berlin was founded in 1851 by the former Prussian Minister of Finance, David Hansemann, for the purpose of being the medium of procuring cheap credit accommodation for its members, consisting chiefly of small and middle-class traders and business people. In the year 1856, however, the institution was turned into a banking business. with a capital of 10 million thalers

(M. 30,000,000 = £1,500,000). Under the management of David Hansemann and his son Adolph Hansemann, of whom the latter was at the head of the undertaking until 1903, the institution soon developed into a bank of importance. It is interesting to note that the Bank is both limited and unlimited, its Constitution being based upon the *commandite* principle. The seven directors are partners in the business with unlimited liability, while the liability of shareholders is limited to the amount of their shares. The most important steps in its progress are marked by the different additions to the capital. These were in the year 1872 from 10 million thalers to 20 million thalers (60 million marks), 1889 to 75 million marks, 1898 to 130 million marks, 1902 to 150 million marks, 1904 to 170 million marks, and 1911 to 200 million marks, fully paid up.

In the year 1914 the capital of the Bank has been increased from 200,000,000 marks to 300,000,000 marks, the additional 100,000,000 marks having been raised partly for the purpose of acquiring 10,000,000 marks of new shares in the Norddeutsche Bank in Hamburg, and 75,000,000 marks has been issued in exchange for the shares of the Schaaffhausen'scher Bankverein of Cologne. The paid-up capital of this latter Bank was 145,000,000 marks, of which the Disconto held 20,000,000 marks. The balance of 125,000,000 marks was taken over by the Disconto on the basis of three of its own shares for five shares of the Schaaffhausen'scher. The acquisition of this Bank was expected to raise the deposits and current accounts of the Disconto from 674,000,000 marks to about 1,000,000,000 marks.

Beyond regular banking business the Disconto-Gesellschaft has since the sixties taken up the work of making new issues of loans and companies as its own speciality, and the special form of this branch of business in Germany has chiefly been brought about

THE COMMERCIAL BANK OF SCOTLAND LTD.

ALEX. ROBB, General Manager. MAGNUS IRVINE, Secretary.

London Office:—62 LOMBARD STREET, E.C.

GEORGE S. COUTTS, Manager. JOHN F. SANDEMAN, Asst.-Manager.

GENERAL BANKING BUSINESS transacted. CIRCULAR NOTES, DRAFTS, and LETTERS OF CREDIT issued, payable at Banking Houses in all parts of the world.

With its 176 Branches located all over Scotland the Bank is in a very favourable position to deal with remittance and all other Banking transactions on the best Terms.

The Bank undertakes AGENCY BUSINESS for Foreign and Colonial Banks.

by this Bank. During the war years 1870-71 the institution carried through the loan transactions of the North German Federal Government, which availed themselves of the Bank's services for the negotiation of the war loans.

While most of the other large banking houses in Berlin began at an early date to develop a widely spread net of branch offices and agencies, this Bank until the beginning of the twentieth century adhered to the principle of centralisation of business. Since then, however, having regard to the altered circumstances of the time, it has established a number of branch offices outside Berlin. But before this period—in 1895—it had entered into close connection with the Norddeutsche Bank in Hamburg, the whole capital of which, amounting to M. 70,000,000 (£3,500,000) is in its possession. The category of allied banks includes: Allgemeine Deutsche Credit-Anstalt, Leipzig, Süddeutsche Disconto-Gesellschaft A.G., Mannheim, Bayerische Disconto- und Wechsel-Bank A. G., Nürnberg, Bank für Thüringen vorm. B.M. Strupp Aktiengesellschaft, Meiningen, Stahl and Federer A.G., Stuttgart, Barmer Bank-Verein Hinsberg, Fischer and Co., Barmen, Magdeburger Bank-Verein, Magdeburg, Oberlausitzer Bank, Zittau. And the Bank is interested in other banks in various parts of the world.

The activity of the Disconto has also been of importance to the industrial progress of Germany in recent decades.

From about 2,000,000 marks in 1852 the deposits grew to nearly 43,000,000 marks in 1870. By 1890 they had risen to 126,000,000 marks, and by 1900 to 181,000,000 marks. In the last 14 years they have risen to 805,000,000 marks, partly in consequence of the recent acquisition of the Schaaffhausen'scher Bankverein of Cologne.

The Continental banks have no need to keep in hand any large amount of cash, as the State banks are charged with the duty of providing an adequate supply of currency. All they need is a sufficiency of till money for everyday purposes. Any extra demand is met by loans from or by bills discounted at the State banks. The proportion of cash to deposits and current accounts at the end of last year was 18%.

The Bank earned a gross profit last year of nearly 39 million marks, but as the expenses were heavy in consequence of the War the net profit was reduced from 24,517,000 marks to 20,865,000 marks. It was still large enough to provide a dividend of 8%, against 10% in 1913. The profits since 1904 have been as follows:—

DRESDNER BANK.

Head Office: Dresden, Germany.
London Office: 65 Old Broad Street, E.C.

Capital—
Authorised and Issued ... ... M. 200,000,000
Price of Shares, 136%. *Dividend*, 6%. *Yield*, 4·41%.

The third largest German joint-stock bank is the Dresdner. It was founded in 1872 to take over the Dresden banking house of Michael Kaskel, its initial capital amounting to 9,600,000 marks. The progress of Germany and the rapid development of banking in Berlin induced the Dresdner to open a branch in that city in 1881. Since that date the growth of its business has been very rapid, its capital rising almost year after year from 9,600,000 marks in 1879 to 130,000,000 marks in 1899, and to 200,000,000 marks in 1910. At this figure it still remains. At the same time its reserve funds, partly by means of the premiums obtained on the issue of shares, have risen, until they now amount to 61,000,000 marks. The total capital and reserve of this Bank is, therefore, 261,000,000 marks, or £13,050,000. For the greater part the expansion in its business has been brought

* Cash at other banks included in Current Accounts.

about by the general expansion of Germany; but it has also come from the absorption of a number of provincial banks, and many of its existing branches were formerly the establishments of private bankers. The Dresdner has participated with the other great banks in the foundation of subsidiary and allied institutions in many other countries, and also works in alliance with various banks and private bankers in other countries.

From the statement of assets and liabilities of the Dresdner at various periods since its formation it will be seen that its deposits, which in 1880 amounted to only 9,500,000 marks, and which in 1890 increased to 80,000,000 marks, had grown by 1900 to 295,000,000 marks, and that since then they have increased to the sum of 948,000,000 marks, in part through the absorption of a number of small banks. The Bank employs 42 per cent. of its resources in current accounts, while the bills discounted amount to 24 per cent. of its assets. The falling off in Stock Exchange business owing to the War has reduced the loans by one-half. The proportion of cash to deposits is 17 per cent., and its investments are less than 7 per cent. of its total assets. The gross profit in 1914 was reduced from 43,171,000 marks, to 41,447,000 marks, and as the Bank was able to reduce its expenses the net profit was nearly the same as in the previous year, amounting to 18,610,000 marks. Nevertheless, the directors deemed it wise to adopt a conservative dividend policy, and the dividend was reduced from 8½ per cent. to 6 per cent. The profits and dividends of the Bank in recent years have been as follows:—

Profits of the Dresdner Bank.

EQUITABLE TRUST COMPANY OF NEW YORK.

Head Office: 37 Wall Street, New York City.
London Branch: 95 Gresham Street, E.C.

Capital—
Authorised and Issued, 30,000 Shares of $100, fully paid $3,000,000
Price, 415%. *Dividend*, 24%. *Yield*, 5.78%.

This is one of the older trust companies in the United States. It was formed in 1871 as the American Deposit and Loan Company, and adopted its present title in 1902. Its growth was comparatively slow until recent years, when its business was largely increased by the absorption of the Bowling Green Trust Company in 1909, of the Madison Trust in 1911, and of the Trust Company of America early in 1912. At the end of 1903 its deposits rose to over $22,000,000, but at the end of 1907 they fell to under $10,000,000 in consequence of the runs to which the various trust companies were then subjected during the banking crisis of that year. Since then, however, partly by reason of the amalgamations and partly owing

* Trust Company of America merged into Equitable Trust Company, February 26, 1912. † Equitable and Bowling Green Trust Companies consolidated in March 1909. ‡ American Deposit and Loan Company.

to the increasing strength of the institution, its deposits have rapidly expanded until in June of this year they amounted to $96,402,000. The capital of the undertaking was raised from $500,000 to $1,000,000 in 1902, and to $3,000,000 in 1913, at which figure it has since remained. The greater portion of its capital funds are, however, derived from its surplus profits, and whereas prior to 1902 these were only a few thousand dollars, they now reach $9,192,000. Hence the total capital and surplus is $12,192,000, and represent 10.7 per cent. of the total liabilities. We should mention that in 1911 practically a controlling interest in the undertaking was purchased by the existing President, Mr. Alvin W. Krech, from the Equitable Life Assurance Society.

The business is a profitable one. For the last six years the dividends have been 24 per cent., but doubtless owing to the fall in the prices of securities, the surplus and undivided profits since 1911 have been reduced from $11,205,000 to $9,192,000. The Company holds about $29,000,000 of securities. Its other assets consist of $41,000,000 of loans and bills and $36,000,000 of cash. The profits of the institution from 1904 to 1911 are stated below. The amount of the profit in the last three years has not been published:—

Authorised and Issued, 10,000 Shares of $100, fully paid $1,000,000
Price of Shares, 1,127½%. *Dividend,* 50%. *Yield,* 4.46%.

ALTHOUGH the majority of the trust companies of the United States have been organised within the past forty years, the need of them was felt many years before, and as early in the last century as 1822 the first trust company was incorporated, and a charter granted to the Farmers' Fire Insurance and Loan Company, of New York, which name was changed by an Act of the Legislature, passed in 1836, to the Farmers' Loan and Trust Company.

The original Act of incorporation gave to the Company power to make loans on mortgages; but the feeling that was then prevalent, that corporations should not hold real property any further than was absolutely necessary for their corporate purposes, was manifested by the provision that any mortgaged property which was taken on foreclosure should not be held longer than five years, and that, if held for a period beyond that term, the title should immediately be forfeited to, and vested in, the people of the State of New York.

Authority was also given to this corporation to purchase and hold any stock or foreign debt, or the stock of any corporation; which is interesting in view of the subsequent history of corporations, in reference to which legislation for some time practically forbade their acquiring stock in other corporations.

The corporation also originally had power to insure against loss by fire, and to grant life insurance and annuities.

In the same Session of the Legislature which passed the Act of Incorporation, another Act was passed providing: "That the said Corporation shall also have

authority to receive and take by deed or devise any effects and property, both real and personal, which may be left or conveyed to them in trust, and to assume, perform, and execute any trust which has been or which may be created or declared by any deed or devise as aforesaid; and the said Corporation are authorised to receive, take, possess, and stand seized of, and to execute any and all such trust or trusts in their corporate capacity and name, in the same manner and to the same extent as trustee or trustees might or could lawfully do, and no further."

This grant of power to act as trustee is undoubtedly the earliest bestowal of such powers upon any corporation in the State of New York, if not in the United States. The language employed is of the broadest character possible.

The early Acts relating to this Trust Company are also interesting as reflecting to a considerable degree the feeling of jealousy which was prevalent in the United States in the early part of the last century, to the formation of banks and money institutions. The original Act of Incorporation of the Trust Company provided that nothing in the Act should be so construed as to authorise the said corporation to receive any deposit or deposits, nor to discount any promissory note, bond, due-bill, draft, or bill of exchange; nor shall it be so construed as to allow any banking privileges or business whatever.

The subsequent history of this Trust Company has emphasised the truth that persons in creating business institutions are often unable to foretell the course of development of those institutions in the future.

So, in the case of the Farmers' Loan and Trust Company, which was organised as an insurance and loan company, the last outstanding life insurance policy, which was issued in February 1838, was not paid until February 1898—sixty years after the date of its issue. The very first power given to the Company was that of making loans on mortgages, and the purpose of this power was set forth clearly in the Act, showing that the design was to aid the citizens of the State residing in the country. Under its charter the Company was required, within one year from its incorporation, to make loans on the security of real estate within the State of New York and within the limits of the Southern District of New York, to the amount of at least $150,000, and when the capital stock of the Company was increased from $500,000—which it was originally—to $1,000,000, such increase was made conditional on the investment of an additional $150,000 in bonds and mortgages on lands within the city and county of New York.

After the capital was increased to $2,000,000 it was reduced to $1,000,000, at which it has remained since the fifties. The reserve fund, or, as it is termed in the United States, "surplus profits," has been gradually built up until at the present moment it amounts to $6,575,000. This sum includes the undivided profits. The business has shown the greatest expansion since 1902. In that year the deposits were $45,000,000, from which they have increased to $134,091,000 in June 1915. Of the total assets, amounting to $144,000,000, $52,000,000 are now employed in loans and bills, $43,000,000 are invested in securities and mortgages, and $42,000,000 is cash in hand. The great expansion in the business of the Company since its foundation is shown by the statements of the liabilities since 1826 and of the assets since 1890.

The undertaking is a very profitable one, and on its small share capital the dividends have been 50 per cent. since 1910, before which they were 40 per cent. The course of the profits since 1904 has been as follows:—

FIRST NATIONAL BANK OF BOSTON.

Offices: 70 Federal Street, Boston, Mass.

Capital—

Authorised and Issued, 50,000 Shares of $100 each $5,000,000
Price of Shares, 430%. *Dividend,* 16%. *Yield,* 3.75%

UNTIL June 1903 the business of the First National Bank of Boston was of very moderate proportions, its deposits at that time amounting to no more than $4,000,000. It then took over the business of the Massachusetts National Bank, retaining the same title, and at the end of 1904 its deposits were $36,000,000. Since then its growth has been rapid, and in June of this year the deposits reached the great sum of $90,668,000. The whole of the increase since 1904 has been due to the expansion of business and not to any further amalgamations or absorptions. The Bank commenced business in 1859 with the title of the Safety Fund Bank, but its title was changed to the First National Bank in February 1864, when it was decided to take advantage of the National Bank Act. The Massachusetts National Bank, which it absorbed in 1904, and which brought it so great an increase of business, was a very old institution, its original charter dating back to 1784. The latter institution experienced very great difficulties during its history, and at the end of the nineties its deposits fell to less than $1,000,000. However, it was saved from destruction by the courage, energy, and ability of Mr. John W. Weeks, the Senator for Massachusetts, and the institution as the First National Bank is now one of the strongest and most progressive banks in New England. The institution is a reserve bank, and its cash in hand and with other banks largely exceeded the minimum required by law. The capital of the Company was increased from $1,000,000 to $2,000,000 when the Massachusetts National Bank was absorbed, and it has since been increased to $5,000,000, while the surplus and undivided profits which grew from $1,000,000 to $2,000,000 in 1904 have since been raised to $11,833,000. The total capital and reserves have now attained the relatively large total of $16,833,000, and represent a proportion of 14 per cent. to the total assets. A large part of this great addition to the reserve was secured by the creation of new capital at high premiums. The strength of the institution will be appreciated from the comparative statement of the liabilities and assets herewith. The Bank has 4,000 domestic and foreign correspondents, while it is the depositary for nearly 700 banks throughout New England.

In June last the Bank raised its rate of dividend to a 16 per cent. basis, 12 per cent. having been paid since 1908. The net profit earned last year was equal to nearly 20 per cent. on its stock and to about 6 per cent. on its capital and reserves. The profits of the undertaking are set out below:—

FIRST NATIONAL BANK OF CHICAGO.

Office: Chicago, Illinois, U.S.A.

Capital—
Authorised and Issued, 100,000 Shares of $100 each $10,000,000
Price of Shares, 470%. *Dividend,* 23%. *Yield,* 4·89%

Probably no city in the world has made as much progress as Chicago in the past century, and there seems to be no limit to its possible expansion. As recently as 1831 it was a tiny village of 100 inhabitants, and when it was incorporated as a city in 1837 its population was no more than 4,170. In 1850 its numbers had increased to not quite 30,000, and in 1860 to 109,206. At that stage of its development the need for banking accommodation became pressing. It is true a number of banks then had offices in Chicago, but the growth of the city was so rapid that the banking facilities were entirely inadequate. Consequently, when the National Banking system was created in 1863 a number of leading Chicago merchants immediately decided to form the First National Bank of Chicago, and in June 1863 the Bank was authorised to commence business by the Comptroller of the Currency. It was thus among the first banks to be created under the National Currency Act.

The banking facilities which the National Banks, headed by the First National, provided for Chicago have powerfully contributed to the marvellous growth of the population, trade, and wealth of the second city of the United States. By 1870 the population had grown to 306,000, and notwithstanding the great fire that destroyed a large portion of the city in 1871, the population in 1880 had grown to 503,000. Since then its numbers have continued to double every decade, amounting in 1890 to 1,100,000, and in 1910 to 2,185,000. Throughout its history the First National Bank has had for its Presidents men of conspicuous ability. Its first President, Mr. Edmund Aiken, saw the deposits of the institution grow from nothing in 1863 to about $1,500,000 in 1867. The second President, Mr. Samuel M. Nickerson, saw the deposits rise to nearly $24,000,000 in 1891. Mr. Lyman J. Gage, who subsequently became Secretary of the United States Treasury, and who was largely responsible for the step taken by the McKinley Government in securing the maintenance of the gold standard, witnessed the deposits rise to $29,000,000 in 1897, notwithstanding the extremely severe depression which visited the United States during his Presidency. And Mr. James B. Forgan, one of the recognised leaders of American banking, has, since 1900, seen the deposits expand from $43,000,000 to $136,000,000. In 1900 the Union National Bank was taken over with deposits of $14,607,000, and in 1902 the Metropolitan National Bank was acquired with deposits of $22,273,000. On the other hand, a number of accounts have been transferred from the First National Bank of Chicago to the First Trust and Savings Bank of Chicago—an undertaking created by the Bank and owned by its stockholders. The First Trust and Savings Bank was formed in 1903 by the payment of a special dividend of $12.50 per share upon the stock of the First National Bank of Chicago, a distribution which provided a stock capital of $1,000,000 for the new undertaking. This institution was formed to enable the First National to overcome the legal obstacles to its receiving savings deposits and performing the work of a trust company. For all practical purposes the two institutions are one undertaking. The agreement constituting the First Savings Bank and Trust Company, dated November 2, 1903, stated in its preamble that:—

It is deemed to be for the interest of the stockholders of said The First National Bank of Chicago that a Savings Bank and Trust Company should be organised under the laws of the State of Illinois, which shall be continuously owned by the persons who shall from time to time be the shareholders of record of the said National Bank, or such other bank as may from time to time succeed to said National Bank's good-will and business, in proportion to the respective holdings of record of the stock of said National Bank (or its successors as aforesaid,) for the purpose, in part, of transacting for the patrons of said National Bank certain branches of business usually or often transacted by banking institutions, but not clearly included within the corporate powers of said National Bank; and to that end it is desirable to secure the consent in writing of all the shareholders of

said National Bank to the plan for the organisation of said Savings Bank and Trust Company and the ownership of its stock and the management of its affairs.

Under the new Federal Reserve Act passed by Congress in 1913 National Banks are permitted to act as trustees, so that the need for carrying on the two branches of the business as separate undertakings would now seem to have disappeared. The deposits of the Trust and Savings branch of the business are now as much as $61,000,000, and the aggregate deposits of the combined undertakings have now risen to nearly $200,000,000. When it is remembered that the National Banks in the United States have no branch establishments the greatness of these deposits will be realised.

The authorised initial capital of the First National Bank was $250,000, and the amount has steadily grown as the business has expanded until in 1910 it was raised to $10,000,000, at which it still remains Reserves began to be accumulated from the first, and they have now grown to $12,507,000, so that the total capital and reserve is $22,507,000, representing

a proportion of 13.3 per cent. to the total funds. The paid up capital of the First Trust and Savings Bank is $5,000,000, of which the first $1,000,000 was provided by a dividend paid by the First National Bank and the remainder has been built up out of the Savings Bank's own profit. Beyond this the Trust Company has accumulated a surplus of $5,495,000, and its total capital and surplus is thus $10,495,000, representing a proportion of 14.6 per cent. of the total liabilities. Inasmuch as the two Banks are practically one, it may be said that the paid-up capital and reserves of the institution amount to $33.000,000, and that this is the margin of security for the combined deposits, amounting to nearly $200,000,000, the proportion of the one to the other being over 16 per cent.

The profits of the First National are very substantial, and for last year, in spite of the depression into which American business was thrown by the War, amounted to $2,300,000, equal to a dividend of nearly 24 per cent. upon the capital and of over 10 per cent. upon the capital and reserve. The normal rate of distribution is 12 per cent., but special dividends of 5 per cent. extra have been paid in the last three years. In the current year the directors are understood to have decided to pay regular dividends at the rate of 12 per cent. per annum and a 5 per cent. bonus, making 17 per cent. in all, *plus* a dividend of 6 per cent. from the profits of the Trust Company, or a total dividend of 23 per cent. The course of the dividends and profits of the First National Bank since 1904 has been as follows:—

* Includes special dividend of 5 per cent.

The profits of the Trust Company are also substantial. Last year they amounted to $1,306,000, equal to a dividend of 26 per cent. upon the paid-up capital and of nearly 13 per cent. upon the paid-up capital and reserve. In the past three years the whole of the profits have been devoted to reserve, but the directors have now decided to pay dividends at the rate of 12 per cent. per annum, being equal to 6 per cent. on the shares of the First National Bank. The price of the $100 shares of the First National is now 470, and a 23 per cent. dividend gives a yield of nearly 5 per cent. In considering this yield, however, it should be borne in mind that the profits of the two institutions for 1914 were no less than $3,600,000, equal to a dividend upon the capital of the National of nearly 36 per cent. The profit earned by the First Trust and Savings Bank of Chicago, the whole of the capital of which is held by the First National Bank, is as follows: —

Profits of First Trust and Savings Bank of Chicago.

The growth both of the business of the First National and of the First Trust and Savings Bank will be evident from the statement of liabilities and assets of the two institutions given herewith.

FIRST NATIONAL BANK
(OF NEW YORK).

Office: New York City.

Capital—

Authorised and Issued, 100,000 Shares of $100 each, fully paid $10,000,000

Price of Shares, 880%. *Dividend,* 38%.* *Yield,* 5.7%.

* Plus 12 per cent. on stock of First Security Company.

This institution is one of the leading banks of the United States, and its Chairman, Mr. George F. Baker, has taken a leading part, in company with the late Mr. J. Pierpont Morgan, a director of the institution until his death, in shaping the policy of American banking and in contributing to its present great stability.

The Bank came into existence with the birth of the National system, receiving its charter in 1863, and was, as its name implies, the first in the metropolis to take out a National charter. There were at that time in New York City but 54 banks in operation. These had an aggregate capital of $70,000,000 and deposits of $160,000,000. The National system was inaugurated at a critical period in American banking history. It had to resist many antagonisms, especially in the City of New York, from State banks which had the prestige of long-established Clearing-House connections and undoubted financial strength. Prejudice against the new order of things vanished as the advantages of the National system became better understood, and within eighteen months 39 of the old New York banks with a capitalisation of $56,000,000 applied for Federal charters. Besides this, new banks with a combined capital of $12,000,000 were formed, leaving but 31, capitalised at $15,000,000, continuing allegiance to the State system. From the beginning the First National Bank sought the business of banks and bankers and became the redemption agent and depositary for a large number of out-of-town National banks. It took an active part in the negotiation of war loans, thus employing a large part of its deposits during the first years of business, the results of which amply rewarded the management for their confidence in the credit of the Government. The Bank from the start took a leading position among dealers in United States securities, for itself and as representative of the several refunding syndicates, in financing the various United States loans issued by successive Administrations. During the year 1879 the Bank handled $780,000,000 United States Government bonds, completing their receipt and delivery without error or loss. The capital was increased on July 19, 1901, to $10,000,000, a like sum being carried to surplus account. The dividend of 1,900 per cent., declared at that time, is believed to be the largest ever made by a banking institution.

Notwithstanding the very large distributions of profits that have been made from time to time, the present amount of the surplus and undivided profits is $21,308,000, and the capital and reserve together amount to $31,308,000, or 14.8 per cent. of the total liabilities. The deposits of the institution are liable to wide fluctations. After rising to $110,000,000 in 1904 they declined to $87,000,000 in 1906. In 1911 they rose to $145,000,000, and again declined to $103,000,000 in June 1913. They have now risen to $172,000,000. These fluctuations are due to the varying needs of its many correspondents in the country. In periods when the interior bankers have large balances they cannot use, the deposits reach great figures; on the other hand, when trade is very active and interior bankers require funds its deposits decline.

* As at December 31.

In 1908 the Bank followed the example of the First National Bank of Chicago and formed a subsidiary Company entitled the First Security Company. The capital of this subsidiary Company was fixed at $10,000,000, and the whole of it was provided by the payment of a special dividend of 100 per cent. upon the shares of the First National Bank of New York. That this institution is merely a branch of the First National is shown by the endorsement which has been made upon its shares. The endorsement is as follows:—

The registered holder of the within certificate is entitled, for and in respect of each and every share of stock of the First National Bank of the City of New York represented thereby, to share equally and rateably with all other holders of stock certificates of the Bank similarly endorsed, according to their several interests, in the dividend or profits, and in case of dissolution in the distribution of the capital of the First Security Company, a corporation of the State of New York, organised in pursuance of a certain written agreement dated February 14, 1908, between G. F. Baker and others and J. P. Morgan and others, stockholders, such interest of the owner of the within certificate and of all other like certificates similarly endorsed being subjected to all the terms, conditions, and limitations of the said agreement; such rateable interest to be sold or transferred rateably only by the transfer upon the books of the Bank of one or more of the shares of the stock represented by a bank stock certificate bearing this endorsement, and all of the interest in and to, or in respect of said Security Company or its capital stock represented by a bank stock certificate bearing this endorsement shall pass rateably with, and only with, the transfer of such shares of the Bank represented by such a bank stock certificate, and upon transfer thereof upon the books of the Bank; and an interest in the Security Company attached to any share of the Bank shall be alienable only in connection with such transfer of such bank stock.

No holder of the within certificate or any transferee of any share thereby represented shall be entitled in lieu thereof to demand or receive from the Bank a new certificate except with this endorsement thereon, and a transfer of any share of bank stock represented by the within bank stock certificate shall be made by any holder thereof only to a transferee accepting therefor a new certificate bearing this endorsement.

No right to vote upon or in respect of any stock of the Security Company passes to or shall be exercised by the holder of the within certificate, such voting right being reserved to and by the trustees of their successors.

The object of this subsidiary institution was to carry on certain lines of profitable business which, though often transacted by bankers, were not included within the corporate power of National Banks, including the acquiring and holding of real estate, securities, stocks, and other property. The particulars of the liabilities and assets of this subsidiary Company are not available. In the past year the dividend distributed by the National Bank was 38 per cent., but to this must be added the 12 per cent. paid by the First Security Company, making a total dividend of 50 per cent.

Throughout its history the First National has been a very profitable undertaking, its dividends at no time having been less than 10 per cent., while for many years it was 100 per cent. This was when its capital remained at $500,000. Since its capital was increased to $10,000,000 by the payment of a dividend of 1,900 per cent. the distributions have ranged from 20 per cent. to 132 per cent. How very profitable the business has been will be evident from the following statement of the dividends distributed since 1864:—

Dividends Paid by First National Bank (N.Y.), 1864 to 1915.

Year to June.	Div.	Year to June.	Div.	Year to June.	Div	Year to June 30.	Paid by Bank Sec. Co.

						1915	38 +12

(a) Div. of 100% was for capital of First Security Co.; div. of 32% regular.

The profit of the Bank was temporarily reduced by the War crisis of 1914, but has recovered to a normal level in the current year, when its business and deposits have so largely increased. The profits of the First National in recent years and the dividends distributed, exclusive of those received from the Security Company, have been as follows:—

Profits of First National Bank, New York.

* 1908: Dividend of 100% was for capital of First Security Company; dividend of 32% regular.
(a) This profit was reached after charging to a special reserve for depreciation in securities $1,500,000, and after charging off for depreciation in value on specific security items, $636,596.

The statements of the liabilities and assets are given herewith.

GUARANTY TRUST COMPANY (OF NEW YORK).

Head Office: 140 Broadway, New York City.
London Office: 33 Lombard Street, E.C.

Capital—
Authorised and Issued, 100,000 Shares of $100, fully paid $10,000,000
Price, 607½%. *Dividend*, 32%. *Yield*, 5.33%.

THE affairs of the Guaranty Trust Company of New York are of special interest to bankers in Europe in consequence of the large business it transacts in foreign exchange, no small part of the bills drawn against produce—especially cotton—exported from the United States passing through its hands. The institution was formed in 1863 under the title of the New York Guaranty and Indemnity Company, with a capital of $100,000. Its progress was, however, very slow, and in 1891, when it was decided to increase the capital to $2,000,000, its deposits were still no more than $1,000,000. At that time, however, its business began to expand, and by 1895 the deposits had grown to $11,000,000. Since Mr. Alexander J. Hemphill, the Chairman, became President in 1909 its progress has been very rapid. In 1900 its deposits reached $25,000,000, and in 1909, $88,000,000. In 1910 the Fifth Avenue Trust Company and the Morton Trust Company were acquired, both of them being old and well-established institutions, and the deposits in that year rose to $157,000,000. In June last the deposits were no less than $306,000,000, and at the end of September had been further raised to $327,000,000. Its capital was increased from $2,000,000 to $5,000,000 in 1910, and in 1913 was further raised to $10,000,000. The surplus profits have shown steady expansion, and from $500,000 in 1891 grew to $5,500,000 in 1905, to $8,000,000 in 1909, to $18,000,000 in 1910, and to $20,000,000 in 1913. Its total capital and surplus is now $30,000,000. The war panic of 1914 seriously affected bankers in the United States, but the effects had almost completely disappeared by the end of the year.

The dividends distributed were for many years 20 per cent., from which they were raised to 32 per cent. in 1910, and to 40 per cent. in 1911. In 1912 the rate was reduced to 38 per cent. For 1913, with double the capital, the dividend was 32 per cent., and in 1914, notwithstanding the adverse effect of the war panic, the dividend was 28 per cent. The dividends have now been restored to the basis of 32 per cent., the basis for the twelve months from June 1914 to June 1915 having been at the rate of 24 per cent. The profits of the institution and the dividends distributed since 1903 will be seen from the appended statement:—

HANOVER NATIONAL BANK.

Office: Nassau and Pine Streets, New York City.

Capital—
Authorised and Issued, 30,000 Shares of $100, fully paid $3,000,000
Price of Shares, 622½%. *Dividend*, 20%. *Yield*, 3.18%.

THE Hanover Bank was organised in 1851. It began in an old store at the corner of Pearl Street and Hanover Square—hence the name "Hanover Bank." The original capital of the Bank was $500,000, which was soon afterwards increased to $1,000,000. Business grew, and it had deposits of $1,500,000. The Bank then moved into new quarters in a building of its own. Hanover Square was at that time the centre of the wholesale trade, importers and great shipping merchants doing business near by. In 1860 the Bank removed to another building erected for it. In 1865 the Hanover Bank went into the National system, and became "The Hanover National Bank of the City of New York." In 1877 the present administration, headed by Mr. James T. Woodward as President, took control of the Bank. In 1900 the capital was increased from $1,000,000 to $3,000,000, surplus $5,000,000. In January 1903 it took possession of its present home. Since that time the business of the Bank has grown rapidly. In 1881 the Hanover started on an aggressive campaign to build up its business. At that time its deposits were about $6,000,000; and to-day they are $130,000,000.

Through all the varying mercantile and financial conditions since the "Hanover" was established it has maintained a reputation for stability. A feature of its policy has been the holding of a large cash reserve, and in times of financial pressure this policy has been of inestimable value, not only to its own dealers, but to the entire business community, and no customer of the Bank has ever been refused the accommodation to which he was entitled. A large and growing foreign exchange connection has become a prominent feature of the Bank's business. The Hanover National Bank is a Government depositary and acts as reserve agent and correspondent for a great number of out-of-town banks and bankers.

METROPOLITAN LIFE ASSURANCE SOCIETY.
Established 1835.

ALL SURPLUS DIVIDED BY WAY OF REDUCTION OF PREMIUM.

The Rates of Reduction for current year range from 79% to 34%.

APPLY FOR PARTICULARS OF THE SOCIETY'S
DISCOUNTED ABATEMENT SYSTEM.

ANNUAL PREMIUM, FOR FIRST FIVE YEARS, reduced in anticipation of future distribution of surplus, for Whole-Life Policies or Endowment Assurances of £100.

AGE NEXT BIRTHDAY	ASSURANCE PAYABLE: At Death	At Death or Age 55	At Death or Age 60
25 ...	£1 12 3	£2 10 7	£2 3 1
30 ...	1 16 9	3 3 7	2 12 8
35 ...	2 2 9	4 3 2	3 5 11
40 ...	2 9 10	5 16 0	4 6 0

After 5 years the Premiums under this scheme are subject to FURTHER REDUCTION in respect of any abatement declared in excess of 33 per cent.

NO COMMISSION. NO SHAREHOLDERS

Office: 13 Moorgate Street, London, E.C.

In 1901 it absorbed the Continenal National Bank, which had a capital of $1,000,000, surplus of $500,000, and deposits of $5,000,000. In April 1912 it further added to its business by absorbing the Gallatin National Bank, with a capital of $1,000,000, surplus of $3,000,000, and deposits of $8,000,000. This Bank was organised under a special charter in 1829.

The capital of the Bank has remained unchanged at $3,000,000 since 1900, but its surplus has risen steadily from $5,000,000 in 1900 to $15,000,000 at the present time. The progress of the institution, more especially since 1905, will be evident from the statement of liabilities and assets given herewith.

For the year to June last its profit was $948,000, equal to a dividend of 31 per cent. upon the stock, notwithstanding the severe depression following upon the declaration of war in Europe. The dividend distributed was 20 per cent., calling for $600,000. The profits and dividends since 1904 have been:—

1906	1,124,884	390,000	13	750,000	517,887
1905	616,331	330,000	11	250,000	583,002
1904	596,482	300,000	10	500,000	496,671

It will be noted that the price of the shares is 622½ per cent., and that the 20 per cent. dividend gives a yield of less than 3¼ per cent. It is evident, however, that the price of the shares is regulated by the fact that the Bank could pay a dividend largely in excess of the present rate of distribution.

ILLINOIS TRUST AND SAVINGS BANK.

Offices: La Salle and Jackson Streets, Chicago, Ill.

Capital—
Authorised and Issued, 50,000 Shares of $100, fully paid $5,000,000
Price per Share, 477½%. *Dividend,* 20%. *Yield,* 4.18%

THE greatest of the trust companies of Chicago is the Illinois Trust and Savings Bank, which was organised in 1873 with a capital of only $100,000. The progress of the institution was very slow until Mr. John J. Mitchell became the President in 1880, but since then it has developed into one of the great banks of the country. Within 10 years from 1880 its capital had been increased from $100,000 to $1,000,000, and its deposits had grown from $700,000 to $13,000,000. In the following 10 years the capital was increased to $3,000,000 and the deposits grew to $65,000,000, and by 1910 the capital had risen to $5,000,000 and the deposits to $91,000,000. The capital is now $5,000,000 and the deposits are $97,040,000. In building up the business of the institution great care has been taken to strengthen the reserve fund, and whereas in 1890 the reserve was less than $700,000, it is now $10,000,000. It should be specially noted that the growth of deposits is entirely natural and has been brought about without the assistance of mergers or of consolidations with other banks.

The undertaking is a profitable one, dividends of 20 per cent. having been paid for the last eight years. For the year to June 1915 the net profit was $1,326,000, equal to a distribution of 26 per cent. upon the stock. It will be realised that the past twelve months has been an exceptionally difficult period for bankers in all parts of the world, but that bankers in neutral countries especially are now making large profits. The conservative policy followed as regards the distri-

Price of Shares, 148%. *Dividend*, 10·24%. *Yield*, 6·92%.

When the Franco-German war broke out, Germany was split up into a multitude of States, each having its own Government, its own laws, and its own institutions. The old Germanic Confederation had, indeed, been abolished by the war of 1866, and Austria's constitutional connection with the German States brought to an end. On the other hand, that war had added to the Prussian dominions the Duchies taken from Denmark by the war of 1864, while the Franco-Prussian war added to the new German Empire Alsace and Lorraine. When, therefore, the Franco-German struggle ended in the complete and unexpected success of the Germans, a strong desire sprang up for consolidating the new Empire and abolishing everything that stood in the way of a close union between the several States. Amongst other things, it was felt to be indispensable that the gold standard should be established; that one single currency should prevail throughout the Empire; and that these reforms should be safeguarded by the foundation of a single great central bank. The gold standard had been growing in favour all over the Continent, largely owing to the unfounded belief that England's pre-eminence at sea and as a manufacturing and commercial country was largely due to her having established it when she resumed specie payments. It is probable, indeed, that if the war of 1870 had not occurred France would have taken the lead upon the Continent in adopting the gold standard. As it happened, however, the cession by France to Germany of a war indemnity of five milliards of francs, or 200 millions sterling, enabled the latter to forestall the former. Accordingly, one of the earliest changes made was to establish the gold standard. Having thus established a single currency the new Empire turned next to the establishment of one great central bank. First, it debated at great length whether the Bank was to be a State Bank or a private bank. Now, in German phraseology a State bank means a bank owned, as well as controlled ,by the State. There is, as a matter of fact, if that be the true definition, only a single State bank in Europe, and that is the Imperial Bank of Russia. The Bank of England is really a private bank, though connected with the Government. The Bank of France is also regarded as a private bank, though it is managed by a governor and two deputy-governors appointed by the Government. And all the other central banks are, in fact, private in the sense in which the word is used in Germany.

Finally the discussion ended in the decision that the Reichsbank was to be a private bank. The Bank of Prussia—that is of the State which had driven Austria out of the Germanic Confederation and forced all the smaller States to bow to her will—was turned into the Bank of Germany, the capital of the Bank of Prussia being increased by 50 per cent. The capital has been increased twice since. It now amounts to 180 million marks, or nine millions sterling. Strange to say, the argument which seems to have determined that the Reichsbank should be a private bank was, that if Germany were ever to be defeated in war and invaded, the invader would respect the property of a private institution, but almost certainly would disregard the claims of the Government. Hence it was determined that the Bank of Prussia should be turned into the Bank of Germany, and endowed with the capital stated; the fresh capital was to be provided by the investing public; and the Bank was to be under the supreme control of the Chancellor of the German Empire, who is free, when necessary, to appoint a deputy to represent him. Under the Chancellor, the Bank is managed by a President and sub-Presidents, appointed by the Government, and these are assisted by a committee, likewise approved by the Government. The shareholders have, it is true, the right to elect another committee. But it has only consultative powers. As the shareholders are mainly bankers, and as the shareholders must elect from the largest shareholders, it is no doubt true that a committee of experts must advise with very considerable authority. Still, the fact remains that the committee, though it represents the shareholders and consists of a certain number of the largest shareholders, has only consultative powers. Lastly, it was enacted at first that the shareholders should be entitled to a dividend at the rate of 4½ per cent.; that the excess profit, if

* Includes Treasury Notes and Notes of other Banks.

any, should be divided equally between the shareholders and the Government until the reserve fund reached the sum of 60 million marks or three millions sterling; and that after that the Government should receive a larger share. As the charter of the Bank is granted for only 10 years at a time, all these arrangements are subject to amendment whenever a renewal takes place. Accordingly, several changes have been introduced. At the present time the shareholders are entitled, first, to a dividend at the rate of 3½ per cent.; then 20 per cent. of the surplus is to be added to the reserve. And, finally, whatever surplus remains is to be divided in the proportion of three-quarters to the Government and one-quarter to the shareholders. The result is that at the present time the Government's share is considerably larger than the share of the shareholders. In addition to all this, the law requires any premium on new shares sold to be added to the reserve.

The business of the Bank resembles that of the Bank of England and the Bank of France. It is, in fact, a Government bank and a bankers' bank, though, of course, it does business also with private persons and with trading firms and companies. It is, moreover, a note-issuing bank. When it was originally established at the end of 1875 there were no fewer than 33 note-issuing banks in the Empire. Since then 28 of them have lost the right to issue. And as the law was specially framed to eliminate most of the note-issuing banks, and give a monopoly to a very few, it was arranged that the Reichsbank should acquire the right to increase its authorised issue by the amount of the lapsed authorised issue of any and every one of the other banks. At the present time the authorised issue of the Reichsbank amounts to 550 millions of marks, or 27½ millions sterling. The remaining five smaller issuing banks have an aggregate authorised issue of 68 million marks, or £3,400,000. Lastly, the Bank is bound to open branches and agencies in every place which the Government designates. It has covered the Empire very widely with its offices. The regulation of the note issues constitutes the most complex and the most peculiar portion of the law. As has just been said, the Bank has a large authorised circulation. Secondly, it can issue notes against all moneys held, and moneys in this particular are declared to consist of gold, whether coined or in bars, silver, Imperial Treasury notes, and notes of other banks. Above the aggregate of the authorised and the covered circulation the Bank is empowered to issue notes, provided it pays a duty to the Government at the rate of 5 per cent. per annum, but subject to the condition that the notes shall never exceed three times the moneys held. In this case the moneys held mean Imperial gold, silver, nickel, and copper coins, together with the thalers that were not sold when the silver was disposed of; and, lastly, Imperial Treasury notes.

Since the crisis in 1911 a reorganisation of the financial situation has been going on in Germany. Until the Moroccan incident German bankers not only lent to all borrowers, and especially to their own industrial corporations, but they borrowed freely from any country which would lend money to them at rates of interest which gave them a good margin of profit when they came to employ it. In consequence of the Moroccan incident a great deal of French money was withdrawn from Berlin, and German bankers found themselves face to face with the task of financing a large number of industries enjoying great expansion just at the moment they were called upon to repay a considerable amount of the funds they had used in the past for this particular purpose. Hence they had recourse to the Imperial Bank for assistance, and in 1911 the bills held by the Reichsbank increased from 1,337 million marks to 1,800 million marks. The outbreak of the war in the Balkans caused them in 1912 to rise further to 2,046 million marks, an increase in two years of no less than 709 million marks, or £35,000,000. In 1913-14 there was readjustment, and industrial institutions previously financed by bankers' loans appealed to the investing public for funds with which to redeem their indebtedness to bankers. In consequence of this readjustment, the bills held by the Imperial Bank in a single twelve months declined 539 million marks, or £27,000,000. Since Germany's declaration of war against the *Entente* Powers the Reichsbank has been called upon to finance a large part of the Government's war expenditures, and has done so

by expanding its note circulation. Indeed, in the first weeks of war the Government had to rely largely upon the Bank for the means of meeting its expenditures, and between July 23 and August 7, 1914, its note circulation expanded just over 2,000,000,000 marks, or £100,000,000, and within a month the increase reached 2,300,000,000 marks, or £115,000,000. Since that date its note circulation has largely expanded until at the present time it shows an increase, compared with July 23, 1914, of no less than 3,886,000,000 marks, or £194,000,000. Bank of Germany notes provided the whole of the money for the War until the first German war loan of £223,000,000 was issued in September 1914, and also provided over one-fifth of all the money raised for war purposes up to the present time. Moreover, the War has brought a great addition to the deposits of the Reichsbank, and this money has been used directly and indirectly in financing the Government. The increase in the Bank's liabilities since July 1914 has been close to 5,000,000,000 marks, or £250,000,000. and of this great sum 765,000,000 marks has been placed in Treasury notes, while over 3,600,000,000 marks, or £180,000,000, has been employed in the discount of bills, or in making advances under the guarantee of the State. The expansion in both these items may be regarded as the Bank's contribution to the Imperial funds for war purposes. The great assistance which the Bank has rendered to the German Government since the War began will be evident from the following contrast:—

The last German loan of £601,000,000 has only recently been placed. The War loans of Germany so far raised have been as follows:—

Germany's War Loans to October 1915.

	£
September, 1914, 5% War Stock	173,000,000
Treasury Bonds...	50,000,000
February, 1915, 5% War Stock	453,000,000
Treasury Bills approximate	223,000,000
September, 1915, 5% War Loan	601,000,000
Total War Credits	...1,500,000,000

Since the War began the stock of gold in the Bank of Germany has increased about £53,000,000, in spite of considerable exports of gold to pay for imports. Where this great sum of gold has come from is an enigma. Doubtless in part it has come from the German people, who have given up their gold ornaments in order that the gold reserves might be strengthened, and in part from circulation, but in part it is believed to have come from out of the stock of gold held by the Austro-Hungarian Bank prior to the War. Since the War began no return of the latter institution has been published. From the statement below the great accumulation of gold by the Reichsbank in anticipation of war will be evident. Indeed, the financial stringency which was felt over a large part of the world in 1913 and early in 1914 arose from Germany's imports of gold at the time that the world's trade demanded a greater rather than a reduced supply of the metal:—

The great business which the Bank transacted in 1914 brought in a net profit of 67,000,000 marks, against 51,000,000 marks in the previous year and 37,000,000 marks in 1912. The dividend distributed on account of 1914 was 10.24 per cent., against 8.43 per cent. in the previous year and 6.95 per cent. in 1912. The profit accruing to the German Government last year was over 42,000,000 marks, against 31,000,000 marks in the previous year and 22,000,000 marks in 1912. The profits of the Bank in recent years have been as follows:—

IMPERIAL BANK OF RUSSIA
(BANQUE DE L'ETAT).

Head Office: Petrograd.

Capital—
Subscribed and Paid up (all of which is owned by the Russian Government) ... ... Rbls. 55,000,000

THE charter of the Imperial Bank of Russia was granted in 1860 for a few years, and it has since been frequently altered. The capital of 55,000,000 roubles has been supplied by the Government. It is administered by a Governor, two Deputy-Governors, and a Council, all appointed by the Government and removable by it. In short, it is a department of the Treasury. It does all the Treasury financial business. And, of course, it holds the Treasury balances. Before the Bank could be firmly and satisfactorily established it was necessary, in the first place, to bring order into the Russian finances; and, in the second place, to reform the currency. Whether these things could have been done if Russia had to depend upon her own resources it is needless now to inquire. But after France took the finances of Russia under her protection Russia was able to borrow so largely and so freely that she was in a position to endow the Imperial Bank with all the resources requisite and at the same time to reform the currency. The Russian Government, like so many other impecunious Governments, had paid its way largely by issuing inconvertible paper. It decided when it was sure of the help of France to call in and cancel the Government paper. Therefore, it handed over to the Imperial Bank gold obtained by raising loans. The Imperial Bank, on its side, called in the Government paper, issuing its own paper instead; and, of course, when it received gold from the Government it handed over to the Government a corresponding amount of paper, with which the latter could defray its expenses. In this way the reform of the currency was effected in the concluding decade of last century. The rouble was fixed at its present value of a little over 2*s.* of our money, and gold was declared legal tender. The Bank, having thus cleared out of its way the Government paper and become the sole issuer of notes, having also received from the Government immense masses of gold, was in a position to discharge the functions for which it was created. The gold unit is the rouble, but a five-rouble piece is also issued. The Bank is bound to redeem its notes in gold without any limitation. Furthermore, their redemption is guaranteed by the whole resources of the Government. In 1898 the maximum coinage of silver was fixed at three roubles per head of the population and the legal-tender quantity of full-weight silver coins was restricted to 25 roubles. The silver is not counted as part of the cover for the notes. All gold, however, whether in the actual possession of the Bank, or the Government, or held abroad is allowed to be counted.

Prior to the present War the fiduciary note issue of the Bank was restricted to 300 million roubles, and beyond this sum notes had to be covered by gold, and as the stock of gold was as much or more than the notes in circulation the power to make this fiduciary issue was kept in reserve.

Since the present War began necessarily everything has been changed, and the Bank has been called upon to render all the service it was capable of rendering to the Russian Government, and in fifteen months its note circulation has been increased from 1,634 millions to 4,767 millions of roubles, while its stock of gold has fallen slightly from 1,601 millions to 1,592 millions. Beyond providing the Government with some 3,130 million roubles by loan by expanding its note circulation the Bank has repaid to the Government some 281 millions of roubles of Treasury balances, and altogether has supplied the Government with about 3,400 millions of roubles, or £340,000,000. The Government's war expenses up to June 14, 1915, were estimated by the Minister of Finance to have been £573,500,000, and since then at the rate of £2,000,000 per day, so that the total war outlay to the middle of October 1915 is about £817,000,000, and of this sum the Bank of Russia has found over £340,000,000. The Bank has also rendered great services to the Russian nation by means of its foreign balances. The closing of the Dardanelles has practically stopped Russia's power to export, and purchases of goods and munitions from abroad and foreign interest payments have had to be provided out of the foreign balances of the Bank of Russia and by loans raised in Paris and in London. The foreign balances of the Bank have been reduced from 144 million roubles to 38 million roubles; and, moreover, the Bank has entered into an agreement with the Bank of France for a credit of 500 million roubles (£52,770,000), and into another with the Bank of England for £10,000,000. Arrangements have recently been made in London for an additional credit for a large amount.

It is now announced that a new internal short-term 5½ per cent. War Loan for 1,000,000,000 roubles will shortly be issued.

Hence the Bank has rendered and is rendering the most valuable assistance to the Government in financing the War. Of course, when the War is over

RUSSIAN BANK FOR FOREIGN TRADE

ESTABLISHED IN PETROGRAD AND LONDON IN 1871.

Total Assets	6,324,548,000	2,860,685,000	+3,463,863,000

It will be realised that the gold position of the Bank is a very strong one. Between 1900 and 1914 the stock of gold rose from 800 millions of roubles to 1,743 millions, and, notwithstanding the need of Russia to pay out its foreign gold balances for goods purchased abroad, it still amounts to 1,630 millions of roubles. The following statement shows the great increase in the stock of gold since 1900:—

Gold and Silver Holdings of Imperial Bank of Russia.

July 1	Gold. Rbls.	% of Total. %	Silver. Rbls.	% of Total. %	Total. Rbls.
1915 ...	1,678,827,995	96·9	54,302,791	3·1	1,733,130,786

† January 1.

In consequence of the difficulty in supplying exchange in sufficient quantity to pay for Russia's imports with her exports so greatly reduced, the sterling value of the rouble has greatly declined. Normally it stands at 95½ roubles per £10, and in August last it rose to 147½, from which it has now declined to 139½ in consequence of the credits that have been granted by England and France.

IMPERIAL OTTOMAN BANK.

Central Office: Constantinople.
London Office: 26 Throgmorton Street, E.C.

Capital—
Authorised and Issued, 500,000 Shares of £20 each £10,000,000
Paid up, £10 per Share... 5,000,000
Price per Share in Paris, Fr 450.

Although the head office of this Bank is in Constantinople it is a Franco-British Bank. Consequently its business in England is going on as usual, but it is not allowed to carry on business with Turkey. The official announcement authorising it to continue its business in England was as follows:—

"Sir William Plender announces that the Secretary of State for Home Affairs has granted an amended licence dated the 30th of November, 1914, in the subjoined terms, to the Imperial Ottoman Bank and the National Bank of Turkey in substitution of the restricted licence issued on the 5th of November.

"In pursuance of the powers conferred on me by the Aliens' Restriction (Consolidation) Order, 1914,

† Including Bills Receivable.

made on the 9th day of September, 1914, under the Aliens' Restriction Act, 1914, I hereby permit the Imperial Ottoman Bank, the National Bank of Turkey, to carry on banking business at all their establishments situated within the United Kingdom, subject to the following limitations, conditions, and supervision:—

"(1) No transactions shall take place, directly or indirectly, with the establishments of the said Banks situated in enemy territory, or with any persons resident in enemy territory.

"(2) All transactions carried out under this permission shall be subject to the supervision and control of a person to be appointed for the purpose by the Treasury, who shall have absolute discretion to refuse to permit any payment or transaction that may appear to him to be contrary to the interests of the nation.

"This permission may be modified or revoked at any time by the Secretary of State.

"The permission granted by me on the 5th day of November, 1914, is hereby revoked as from the date hereof."

The early financial history of Turkey is a story of chaos and confusion, for which the customs and laws of the Turkish people are largely responsible. The effects of Oriental profusion have, moreover, been accentuated from time to time by a number of unsuccessful wars which seriously impoverished the country. Until the Crimean war the other nations of Europe had no special interest in the finances of Turkey, the involved condition of which effectively stopped the investment of foreign money in the country. But the desire of Russia to annex the country entirely changed the situation both politically and financially—and at the commencement of the Crimean war in 1854 a Turkish loan for £3,000,000 was floated in London with the guarantee of Great Britain and France. This was followed in 1855 by a second guaranteed loan of £5,000,000. The interest of the British people in Turkey thus became financial as well as political, and in 1856, at the close of the Crimean war, a British bank with the title of the Ottoman Bank was opened in Constantinople with a capital of £500,000, fully paid up, in £20 shares. With the Money markets of England and of France thus opened to her, Turkey began to borrow on a great scale, and new loans were issued in quick succession up to 1877. The increasing financial interest thus created caused the Turkish Government to accept proposals for the creation of a State bank, and accordingly, in 1863, a national bank was formed by an Anglo-French group with the title of the Imperial Ottoman Bank. In this Bank the business of the Ottoman Bank was merged on the basis of one £20 share for two shares of £10. The authorised capital of the new institution was £2,700,000, and its paid-up capital £1,350,000. Its charter was for a period of 30 years to 1893. The administration of the new Bank was placed in the charge of a Council in Constantinople, the members of which were selected by a general committee composed of French and English directors resident in Paris and in London. The three administrators in Constantinople were to be approved by the Ottoman Government. The office of the Director-General is in Constantinople, but the annual meetings of the Bank are held in London. Beyond the head office in Constantinople the Bank has always had branches both in Paris and in London. The duties of the Bank include all those appertaining to a national institution. It is authorised to issue notes which are legal tender throughout the Ottoman Empire, to receive the revenues of the Government, to manage the Debt, and to carry on a general banking business. The duties of the Bank have been by no means easy. The opening of the London and Paris markets to Turkish loans caused the Ottoman Government to borrow very large sums of money, and, in consequence of the heavy expenditures incurred during its war with Russia in 1877-79, and the loss of some of its provinces, it was for a time unable to meet the interest on its obligations; and although arrangements were made for the collection of the assigned revenues by the Caisse de la

Dette, only a part of the interest has been forthcoming. Hence, ever since 1879 the Bank has had to deal with an impecunious Government. When one considers the difficulties, one has to recognise that the administration of the Bank has been wonderfully successful, both in earning profits and in building up its existing extensive business.

In 1875 the Austro-Ottoman Bank was acquired, and the nominal capital of the Imperial Ottoman was increased from £4,050,000 to £10,000,000, its paid-up capital was raised from £2,025,000 to £5,000,000, and several Austrian members were added to its general committee. In making this agreement the directors decided to distribute the whole of the reserves in dividend, and in consequence of this the Bank fell upon troublous times during the Russo-Turkish war, and for three years had to suspend its dividends. After that, however, it built up its reserve steadily until in 1910 it rose to the statutory sum of £1,250,000. In 1895 the Government extended its charter for 12 years from 1913 to 1925. The development of Asia Minor in progress in recent years has induced the Bank to open various branches, and at the present time it has seventy-four branches throughout the country, as well as four in Cyprus and five in Egypt. Three years ago a branch was opened in Manchester.

Its business showed substantial expansion until the Russo-Turkish war, but the set-back then given to the country brought about a serious contraction of deposits. During the eighties there was substantial recovery, and the deposits grew from £2,000,000 in 1880 to over £6,000,000 in 1890. In the next few years there was fresh expansion, and by 1895 its deposits were nearly £11,000,000. The Bank then suffered an exceptional misfortune, and in 1900 its deposits were no more than £7,000,000, from which they rose to over £15,000,000 in the years immediately preceding the invasion of Tripoli by Italy. At the end of 1912 the deposits had dropped to £12,000,000, and at the end of 1913 they had recovered to nearly £15,000,000 in spite of the war between Turkey and the Balkan Powers. The report for the year 1914 has not yet been issued, and exactly what effect the present war will have upon the Bank cannot be determined until peace is concluded and a settlement reached.

Since 1879 the rate of dividend has never been less than 5 per cent., and in the six years to 1911 it was 9 per cent. In 1912 and 1913 it was 7 per cent. Since the war began with Turkey no distribution has been made. The dividends paid by the Bank since 1863 have been as follows:—

Dividends Paid by Imperial Ottoman Bank.

Year.	%	Year.	%	Year	%	Year.	%	Year.	%

* Div. per £10 share of £5 12*s.* 8*d.* (including £1 14*s.* 6*d.*, the asset of reserve fund distributions).

Beyond the Ordinary shares there are 216 Founders' shares. Its statutes provide that after 10 per cent. of the net profit has been added to the reserve fund, and provision made for a dividend of 5 per cent. to the shareholders, the balance is to be distributed as follows: 5 per cent. to the Founders' shares, 5 per cent. to the administrators of the Bank, and the remaining 90 per cent. to the shareholders. As soon as the statutory reserve is equivalent to one-fourth of the paid-up capital additions to the reserve cease to be obligatory. The reserve attained the statutory amount in 1910. The profits of the Bank and to whom they were paid will be evident from the following:—

INDUSTRIAL BANK OF JAPAN, LIMITED.

Head Office: Tokyo.

Capital—

Authorised ... ... Yen 17,500,000
Paid up, 350,000 Shares of Yen 50 each 17,500,000
Price of Share, Yen 55. *Dividend*, 6½ %. *Yield*, £5 1*s.* 2*d.* %.

In addition to its paid-up capital the Bank has made several issues of Debentures bearing interest between 4 per cent. and 6 per cent., amounting in the aggregate to Yen 62,443,300. The Bank is empowered to issue Debentures to the extent of 10 times its paid-up capital.

The Japanese name of the Industrial Bank of Japan is the Nippon Kogyo Ginko. It was established in 1902 by the Government of Japan under the provisions of a special enactment passed by the Imperial Diet. It is incorporated for a period of 50 years from 1902, but is entitled to an extension of the term with the sanction of the Government. It conducts the following transactions:—(1) Makes loans on the security of national loan-bonds, prefectural and municipal loan-bonds, or Debentures and shares of companies; (2) subscribes for, or takes over by transfer, national loan-bonds, prefectural and municipal loans or Debentures of companies; (3) receives deposits of money, and undertakes the custody of goods entrusted to it for safe keeping; (4) undertakes trust business; (5) discounts bills; (6) makes loans on the security of estates. In 1902 the Bank purchased from the Imperial Japanese Government national bonds having a face value of Yen 50,000,000, and sold them to a London syndicate formed in October of that year. In 1905 the law of the Bank was amended in order to enable it to extend its business to Korea, Manchuria, &c. In March 1906 the Bank concluded an agreement with the Government of Korea for a loan of Yen 10,000,000, and in the following July was commissioned by the City of Tokyo to issue a municipal loan amounting to £1,500,000. In 1908 an issue of Debentures was offered for subscription in London and in Paris, the total amount being £2,000,000, one-half being offered in each city, the price in London being fixed at 97 per cent. The growth of the institution may be seen from the statement herewith of the liabilities and assets for each year since its start.

During the first six months of 1915 the state of the Money market in Japan continued unfavourable as a result of the European War, and bankers and financial houses in general experienced a considerable decrease in their earnings on account of the low rate of money and the large amount of funds unemployed. Taking into consideration the generally depressed state of the market, the results of the Industrial Bank of

* Total assets the same as total liabilities.

Japan may be considered as distinctly satisfactory. As a matter of fact the profits earned by the Bank have risen from Yen 5,490,048 to Yen 5,830,840. Owing to a correspondingly higher increase in expenses, the net profit at Yen 1,289,714, compares with Yen 1,302,294 for the previous year. The dividend, however, is increased from 6¼ per cent. to 6½ per cent. We show herewith the profit record for each year since 1907.

Profits of the Industrial Bank of Japan, Limited.

Year ended June 30	Gross Profit. Yen.	Expenses. Yen.	Net Profit. Yen.	Dividend. Amt. Yen.	Dividend. Rate. %	Reserve, Invest., Deprn., &c. Yen.	Carried Forward. Yen.

* While allocating this amount to reserve a sum of Yen 893,056 was transferred from special reserve and dividend equalisation reserve.

The proportion that the shown net profit bears to the paid-up capital is 7.3 per cent.; to capital and reserve combined, 6.6 per cent.; and to total working resources, 1.1 per cent.

INTERNATIONAL BANKING CORPORATION.

Head Office: 60 Wall Street, New York.
London Office: 36 Bishopsgate, E.C.

Capital—
Issued, 32,500 Shares of $100 each ... $3,250,000
Price of Share, 107½. *Dividend,* 6%. *Yield,* £5 11*s.* 7*d.*

THE Corporation was organised in 1901 under the laws of the State of Connecticut, one object being to compete with English banks for Eastern exchange business. It is practically the pioneer of the branch banking system in the United States, and it early established its own offices in San Francisco, Mexico, China, Japan, Philippine Islands, and India, and later in the Canal zone, Panama, the total number of offices open at the present time being 16. In 1904 the goodwill and business in the Orient of the Guarantee Trust Company of New York was acquired, which left the International Banking Corporation the sole American bank conducting business in the Far East. The construction of the Panama Canal opened up a demand for banking facilities in the Isthmus, and this has been met by the three branches of the Corporation in the Canal zone. Under American governance the Philippine Islands are rapidly developing their natural resources, assisted by a liberal programme of railway extension. Though, as the name implies, the operations of the Bank are international in character, it also conducts a local banking business in New York. This was done by the acquisition of a controlling interest in the National Shoe and Leather Bank, while in addition a charter was obtained from the State of New York in 1903, incorporating the International Bank under New York laws, the shares of which are nearly all held by the International Banking Corporation. Though undertaking ordinary banking transactions at those centres where it is established by a branch institution, the main purpose with which the Corporation was founded, namely, the financing of the international movements of merchandise, continues to be the principal object of its activities. In 1902 its deposits practically reached $4,000,000; by 1905 they had increased to $12,500,000, and by 1910 to $17,600,000. They have since been in excess of $20,000,000, amounting at June 30, 1915, to $22,119,875. The progress made by the institution may be seen from the statement herewith of liabilities and assets.

For 1906 and 1907 profits were sufficient to permit of the payment of a dividend of 4 per cent. per annum. But from 1908 to 1912 it was necessary to suspend the dividend. The worst year was 1910, when a debit balance of $229,675 was shown, reducing the surplus from $355,119 to $125,444. More profitable years were secured in 1911 and 1912, which permitted the surplus to be increased to $558,290 at the end of 1912. In 1913 dividends were resumed, and 5 per cent. was paid for the year to June 30, 1913; for the twelve months to June 1914 the dividend was placed on a 6% basis, and this has been maintained for the twelve months to June 30 last, in which period a profit of $339,277 was secured, as compared with $309,312. The profit and dividend figures are appended:—

Profits of the International Banking Corporation since 1906.

Year ended June 30	Net Profit. $	Dividend. Amount. $	Dividend. Rate. %	Balance. $	Carried Forward. $
1915...	339,277	195,000	6	144,277	960,550

MECHANICS AND METALS NATIONAL BANK.

Office: 20 Nassau Street, New York City, U.S.A.

Capital—
Authorised and Issued, 60,000 fully-paid Shares of $100 (no liability) $6,000,000
Price per Share, 247½. *Dividend*, 12%. *Yield*, 4·9%.

In part through absorptions, and in part through the natural growth of its business, the Mechanics and Metals National Bank has now become one of the great banks in New York, with deposits of $153,000,000. Until about the year 1900 its deposits did not exceed $14,000,000, and in 1904 the Leather Manufacturers' National Bank was purchased, and in 1910 the National Copper Bank was taken over. Prior to that time the title of the institution was the Mechanics National, the Bank having been formed as long ago as 1810. In May 1914 the Fourth National Bank was acquired. The result of all these acquisitions has been a vast addition to its business, the deposits having increased over twelvefold in 20 years. To take care of the greater business the capital has been increased since 1900 from $2,000,000 to $6,000,000, and the surplus has also risen from $2,000,000 to $6,000,000, while the undivided profits have accumulated from a few hundred thousand dollars to $3,350,000. Hence at the end of June last the total capital, surplus and undivided profit reached $15,350,000, against $4,293,000 in 1900.

The Bank employs most of its money in loans and discounts, but it possesses over $6,000,000 of

United States Government bonds, as well as $11,000,000 of other investments. Its note circulation is rather under $5,000,000. At the end of June its cash amounted to over $35,000,000, representing a proportion to deposits of 23 per cent. The liabilities and assets of the Bank and the great increase in recent years will be evident from the statement herewith.

With the growth of business in proportion to capital the dividends have steadily increased. From 1880 to 1904 dividends were distributed at the rate of 8 per cent. per annum. From July 1904 to 1907 the dividends were at the rate of 10 per cent. per annum, and since 1907 quarterly dividends at the rate of 12 per cent. per annum have been paid, while since 1910 the undivided profits have risen from $2,095,000 to $3,351,000.

NATIONAL BANK OF COMMERCE.

Office: New York City, U.S.A.

Capital—

Authorised and Issued, 250,000 fully-paid Shares of $100 (no liability) $25,000,000

Price per Share, 159%. *Dividend,* 8%. *Yield,* 5.1%.

THE years immediately preceding 1839 were marked by commercial and financial distress and disaster, and in consequence the laws of the State of New York were subjected to thorough revision, and it was no longer necessary to obtain a special Act of the Legislature in order to found a new banking institution. The general Banking Law, passed by the New York Legislature, became operative April 18, 1838. It established banking in the State of New York upon a sound basis, and furnished a model first for the other States, and finally, during the days of civil war, for the Federal Government. The National Bank Act of 1864 borrowed its main features from the New York general Banking Law of 1838.

Eighteen residents of New York City decided to supply the want for an institution with large capital, and they obtained from the State a charter under the general Banking Law, which was to continue in force for 50 years from January 1, 1839, for the Bank of Commerce in New York. The articles of association provided for the immediate issue of 50,000 shares of $100, constituting a capital stock of $5,000,000, and authorised the directors to increase the capital to any figure up to $20,000,000. In April 1856 the paid-up capital was increased to $10,000,000; in May 1877 it was reduced to $5,000,000; in March 1900 it was again raised to $10,000,000, on consolidation with the National Union Bank; and in August 1903 it was increased to $25,000,000 on merger with the Western National Bank of the United States.

The Bank opened its doors on April 3, 1839, "to receive deposits and commence discounting," with a paid-up capital of $1,003,426, and at the first annual meeting of shareholders, on second Monday of May, the President reported deposits amounting to $674,464, after less than six weeks of banking operations. In 1864 the Bank decided "to accept the Act of Incorporation of the Congress of the United States entitled 'An Act to provide a national currency secured by a pledge of U.S. bonds, and to provide for the circulation and redemption thereof,' approved June 3, 1864." And in January 1865 it became a National Bank, with a capital of $10,000,000, a surplus of $2,000,000, with individual deposits of $7,314,883, and with deposits of banks and bankers amounting to $3,221,242. At that date its loans were $3,940,063, and it held $13,705,000 of United States Government securities.

It is interesting to recall that the founders of the Bank hoped to create an institution so strong that it would be selected as the fiscal agent of the United

* May 13, 1839.

States. Indeed, the articles of association authorised an issue of stock not exceeding $30,000,000, to be subscribed for by the United States, or by any State, at such price or upon such terms as the majority of the directors might elect. This issue was to be in addition to any amount of stock which might be held by private parties. No bank in the country, except the Bank of the United States, had been established on so great a scale. In its early days the Bank at various times purchased Treasury notes and bonds from the Government, and received the deposits of the Government. But all official connection between the Government and the Bank ceased by the adoption of the independent Treasury system in 1848. During the Civil War the Bank rendered important assistance to President Lincoln, and it issued letters of credit for £580,000 on Baring Brothers, London, to enable his agent to purchase the firearms that were so badly needed by the Army of the North. Moreover, its President strongly supported the appeal of President Lincoln for a 7 per cent. loan of $250,000,000, or of Treasury notes bearing 7.3 per cent. interest, and his action was largely instrumental in inducing the banks to provide the money. Subsequently it was affirmed in Congress that without the influence of the Bank of Commerce the loan could not have been negotiated. By February 1862 the Bank had subscribed for $9,389,000 of the 7.3 per cent. interest bonds and for $4,702,000 of 6 per cent. bonds, and it made large subscriptions to subsequent issues.

When one considers the smallness of bank accounts in the earlier decades of the Bank's history one realises the substantial progress made by the institution. By 1860 its deposits had grown to over $7,000,000, and decade by decade they have since risen, until in 1900 they reached $64,000,000, while in the next 10 years they grew to the great total of $182,000,000. The deposits at the end of June last amounted to $214,000,000, against $155,000,000 a year earlier. The paid-up capital is now as much as $25,000,000, and its surplus profits amount to nearly $17,000,000, so that its capital and surplus together reach $42,000,000 and represent 15.6 per cent. of its total liabilities. In consequence of the greatness of its capital stock the dividends distributed are of only moderate extent, amounting to 8 per cent. per annum. The course of the profits since 1905 has been as follows:—

Profits of National Bank of Commerce, New York.

Year ended June 30	Net Profits.	Dividend. Amount.	Dividend. Rate.	Special Appropriations.	Surplus for Year.
	$	$	%	$	$
1915	4,410,081	2,000,000	8	—	2,410,081
1914	4,055,568	2,000,000	8	—	2,055,568

1910	2,797,672	2,000,000	8	81,320	716,352
1909	2,280,045	2,000,000	8	104,399	175,646
1908	3,590,953	2,000,000	8	940,474	650,479
1907	3,868,404	2,000,000	8	597,308	1,271,096
1906	3,405,950	2,000,000	8	16,837	1,389,113
1905	2,330,986	2,000,000	8	57,738	272,348

The great strength of the institution from a capital and reserve point of view, and the large expansion in its business, will be evident from the statement of liabilities and assets given herewith.

NATIONAL BANK OF TURKEY.

Head Office: Constantinople, Turkey.

London Office: 50 Cornhill, London, E.C.

Capital—

Subscribed, in £T.11 Shares (£10 English) £T.1,100,000
Paid up £T.2.27 (£2 10s.) per Share ... £T.275,000

THE National Bank of Turkey is a comparatively newcomer among banks, being formed under Turkish law by Sir Ernest Cassel as recently as 1909, with the idea of fostering British trade and interests in Turkey. It may be regarded as a private institution, as the whole of the capital is privately held. The Bank was formed with an authorised capital of £T.1,100,000, or £1,000,000 sterling, and no change has taken place since. Also there are 2,250 Founders' shares of no denomination, which rank for 22½ per cent. dividend out of surplus profits after 5 per cent. dividend on Ordinary and provision made for reserves, directors' fees, &c. The first accounts were made up to December 30, 1909, and those covered a period of only three months. They showed that deposits had been acquired amounting to £T.51,662. At December 31, 1913, the deposits reached £T.826,665. Herewith we set out particulars of the liabilities and assets of the Bank for the years after formation.

For 1912 there was a gross profit of £T.61,819, and a net profit of £T.26,694. In view of the disturbed condition of the country consequent upon the Balkan war, it was not surprising to find that for 1913 the gross profits receded to £T.52,653, the net profit being £T.22,642. Details of the profits are appended herewith:—

NATIONAL CITY BANK.

Head Office: Wall Street, New York City, U.S.A.
Office of London Representative: 3 Lombard St., E.C.

Capital—
Authorised and Issued, 250,000 Shares of $100, fully paid $25,000,000
Further liability of $100 per share $25,000,000
Price, 395%. *Div.* 12·4 per cent.* *Yield,* 3.18%.

* 10% on $25,000,000 of National City Bank Stock and 6% on $10,000,000 of National City Company Stock, are equal, in the aggregate, to a dividend of 12.4% on Bank stock.

The City Bank of New York was incorporated on June 16, 1812, by Act of the Legislature of the State of New York, with an authorised capital of $2,000,000; and when it commenced business its paid-up capital was $800,000. In the whole of the United States at the time of the chartering of the City Bank there were only 88 banks, with an aggregate capital of $42,610,000, a very different state of affairs from that existing at the present time. Throughout its history the Bank has participated in issues of Government bonds and has rendered valuable assistance to the Government of the United States when its credit was not as high as it is to-day. Moreover, it has done all those things which a bank can do to build up the welfare of the country. In 1852 it was reorganised under the general Banking Law of the New York State, and in 1865 was registered under the National Bank Act as the National City Bank of New York. Its capital, which had been raised to $1,000,000, remained at this sum until 1900. The progress of the Bank has, however, only been really noteworthy since the year 1890. Prior to that year its deposits and its business grew but slowly, and in 1890 its total deposits were less than $12,000,000, and the total funds no more than $15,000,000. With the advent of Mr. James Stillman to the Presidency of the Bank in 1891 a complete change came over its affairs, and its policy was brought into line with the new needs of the country. Previously its main business had been to receive deposits from and discount the bills of the mercantile community. While it still continued to take care of its mercantile customers, Mr. Stillman prepared for the advent of the great corporation era, which has so greatly contributed to the progress and welfare of the United States in the last 20 years. Previously business was conducted on a comparatively small scale by small manufacturers in the Eastern States, but the stoppage of the influx of European capital in the nineties, and the severe depression into which the country was then thrown through unsound currency legislation, compelled everyone to reconsider their methods, and brought about the formation of the great producing and manufacturing companies which have since been created, and which have resulted in the economy of so much capital and labour. In the work of reorganising the industries of the United States Mr. Stillman took a leading part. One of the most noteworthy of his achievements was his association with the late Mr. Harriman in the reorganisation and reconstruction of the Union Pacific Railroad, by means of which that great enterprise was raised from inefficiency, poverty, and bankruptcy to a condition of great financial and physical strength and to a state of high efficiency. Mr. Stillman retired from the Presidency of the Bank in 1909, and was succeeded by Mr. Frank A. Vanderlip, who has continued to pursue the policy initiated by Mr. Stillman.

The capital of the Bank remained at $1,000,000 until 1900, when it was increased to $10,000,000, and in June 1902 it was further increased to $25,000,000. In 1890 a reserve of $2,309,000 had been accumulated; by 1900 this had been increased to $5,278,000, and it has now been raised to the great sum of $36,933,000. Thus, whereas as recently as 1890 the total capital and reserve was only $3,309,000, their aggregate amount is now $61,933,000. The growth of the deposits has been correspondingly great. In 1890, when Mr. Stillman became President, they were less than $12,000,000, and in 1909, when he handed the Presidency over to Mr. Vanderlip, they were $277,000,000. The trend of events in recent years has somewhat militated against the accumulation of money in the hands of bankers, great cor

porations and business houses reducing their cash balances to abnormally low figures, and not infrequently obtaining substantial overdrafts in consequence of their temporary inability to raise capital from the public. This explains the decline in the deposits of the Bank in June 1913 to $211,000,000. Since then, however, the deposits have recovered to $361,708,000. Of the $441,000,000 of funds that the Bank now possesses $196,000,000 are employed in loans and discounts, a proportion of 44.5 per cent. No less than $143,781,000 consist of specie and legal tender, and nearly $41,000,000 are due from other banks. Its investments amount to somewhat less than $47,000,000, representing 10 per cent. of its total assets. In consequence of the great accumulation of its funds and of its idle cash, the Bank has recently made active endeavours to build up a foreign business, more particularly in South America, and has opened a number of foreign branches. The great expansion in the business of the undertaking since 1890, and especially in the past two years, will be evident from the statement of liabilities and assets herewith.

In July 1911, in common with other banks, the Company formed a subsidiary undertaking with the title of the National City Company, and with a capital of $10,000,000, for the purpose of holding investments which the Bank was not entitled to hold under the National Bank law and for transacting other business which the trust companies were able to transact By means of this Company it obtained a share interest in a large number of banks throughout the country, including a large amount of stock in the National Bank of Commerce. In consequence, however, of discussion as to the legality of its procedure *re* the Bank, shares reported to be of the value of $6,000,000 were resold. The capital of the National City Company is $10,000,000, which was provided by the declaration of a cash dividend of 40 per cent. on the $25,000,000 of National City Bank stock. This dividend, it was announced, was "in order to facilitate stockholders in acquiring a beneficial interest in a security company." No separate certificates, however, were issued to represent the capital of the new organisation, the ownership of stock in the National City Company being certified by means of an endorsement upon the shares of the National City Bank.

The profit of the National City Bank for the year to May 1915 was $5,380,000, equal to a distribution of over 21 per cent. On the combined capital and surplus the profit was equal to 8¾ per cent., and upon the total funds it was equal to just 1¼ per cent. The dividend distributed in the last seven years has been 10 per cent., but beyond this a special distribution of 40 per cent. was made in July 1911 for the purpose of providing the $10,000,000 of capital in respect of the National City Company. The dividends on the shares of the latter have since been 6 per cent. per annum, so that the total rate of dividend on the National City Bank shares at the present time is 12.4 per cent. In considering the value of the stock account must be had of the very large profits which the Bank has earned in recent years over and above the dividend distributed. The profits of the Bank since 1904 have been as follows:—

Profits of the National City Bank, New York.

Year ended May 1	Net Profits.	Dividend. Amount.	Dividend. Rate.	Transfer to Surplus.	Undivided Profits.
	$	$	%	$	$
1915... ...	5,380,006	2,500,000	10	—	2,880,006

* In addition a 40 per cent. dividend, calling for $10,000,000, was paid out of surplus on July 10, 1911, in stock of National City Company, upon which dividends at the rate of 6 per cent. per annum have been paid each half-year since July 1, 1912.

NATIONAL SHAWMUT BANK.

Office: Boston, Mass., U.S.A.

Capital—
Authorised and Issued, 100,000 Shares of $100, fully paid $10,000,000
Price of Shares, 196½%. *Dividend,* 8%. *Yield,* 4.1%.

THE National Shawmut Bank is New England's largest banking institution, having a capital of $10,000,000, with a surplus or rest of upwards of $7,317,000 and resources of $121,000,000.

Boston was settled in 1630, and the name Shawmut was given it by the Indians, which translated means "living fountains," on account of the many springs of water existing on a part of the peninsula.

Within a 12-mile radius of Boston there is a population of approximately 1,500,000. This territory is known as Greater Boston. The port of Boston ranks second only to New York, and in the current year its imports and exports will be a long way over $200,000,000.

Boston is in the midst of the most important and extensive textile manufacturing industries in the country, there being in New England more than 500 mills equipped with upwards of 15,000,000 spindles. Boston is likewise the largest wholesale market for fish in the United States. These industries are singled out as of special importance.

In 1836 a State bank was chartered, under the name of "The Shawmut Bank," which continued its name and charter until 1864, when it became a National Bank under the title of the Shawmut National Bank, and did business until 1898. At that time conditions made necessary the liquidating of eight of the Boston banks, and a new National Bank was formed to control the business of this entire group. This Bank is the present National Shawmut Bank.

The National Shawmut Bank typifies perhaps better than any other bank in the United States the modern idea of banking amalgamation. The reasons leading to the various consolidations which have resulted in the present Shawmut Bank are partly local and partly economic.

In the first place, the growth of Boston and New England, comprising an area slightly larger than that of England itself, necessitated constantly larger financial units to keep successfully the financial control at home. Under the National Banking Act it became possible to loan to any one corporation only one-tenth of a bank's capital and surplus, and where the growth of corporate transactions constantly demanded increased lines of credit it became necessary to keep in line with this growth with larger resources, so that the business would not go to New York or to some other large city.

Another reason was the local situation of the banks which were brought together under the name of "Shawmut." It was a well-known fact at the time that competition had forced all of them to adopt financial methods not sufficiently conservative for entire safety. The stocks of these banks were largely held by the savings banks of Massachusetts, and on account of a noticeable depreciation in the value of these stocks the trustees of the savings institutions became seriously alarmed. Through amalgamation these stocks were pooled and prevented from coming on to the open market, resulting in the liquidation of the banks without loss to the savings banks. The wisdom of this principle of amalgamation, due to local conditions, has since been more than proved.

Since the first consolidation in 1898 there have been absorbed into the Shawmut eight other Boston banks, resulting in a large increase in deposits, with a corresponding increase of assets.

Recently the Bank has made connections with various foreign banks, especially Canadian and English, and for this purpose has created a foreign department.

The capital in 1902 was raised from $3,000,000 to $3,500,000, and in 1913 it was further increased to $10,000,000. The surplus has grown from $1,587,000 in 1899 to $7,317,000, and the total capital resources have thus risen from $4,587,000 in 1899 to $17,317,000 at the present time. Since 1900 the deposits have expanded from $28,000,000 to $99,000,000. Most of the Bank's money is employed in loans and discounts, which represent 49.1 per cent. of its total liabilities. The liabilities and assets of the institution in each year since 1899 are given herewith.

In 1912, when the capital was still only $3,500,000, a dividend of 12 per cent. was paid, but in 1913 the dividend was reduced to 8 per cent. in consequence of the great increase in the capital stock. A marked expansion in deposits will now be possible before another addition to the capital will become necessary. This fact has to be taken into account in considering the probable course of the dividends.

The profits earned and the dividends paid by the institution since 1905 have been as follows:—

NEDERLANDSCHE BANK.

Head Office: Amsterdam.

Capital—

Authorised and Issued, in Shares of Fl. 1,000.

Fl. 500, Fl. 250, and Fl. 125, all fully paid ... Fl. 20,000,000

The Bank of the Netherlands was created by Royal Decree in 1814; that is to say, when the Emperor Napoleon abdicated. It is a joint-stock Company, the capital being provided by the public. Originally part of the capital was furnished by the Government, as there were difficulties in inducing the public to subscribe. Ultimately, however, the Government sold its shares.

The charter granted in 1814 has been renewed several times, and at each renewal it has been modified, more or less. The present charter was granted in 1903, and will remain in force until 1919. If at that date notice of termination is not given, either by the Government or by the Bank, the charter is to go on from year to year indefinitely. For a long time the Bank was slow to establish branches. Its headquarters were at Amsterdam, and it founded a subordinate institution at Rotterdam. For many years it ceased to do more, but ultimately it was compelled to increase the number of branches. There are now 17 agencies and 83 correspondents. The Bank acts gratuitously as receiving and disbursing agent for the Government at Amsterdam, Rotterdam, and other places where there are branches. And it has to make advances to the Government on current account, subject to certain conditions. The Bank now has the right to issue notes throughout the European dominions of the Netherlands; but it has not a monopoly. The maximum amount of notes to be issued was in the earlier period of the institution fixed by the Government. But in 1863 the maximum limit was abolished, and it was provided that the percentage of reserve should be fixed by Royal Decree. An Ordinance of 1864 prescribed that there should be a metallic reserve of 40 per cent. against bank-notes and all other demand liabilities, and this reaffirmed by Royal Decree in 1880. The rest of the circulation is covered by bills and collaterals on loans. The notes are redeemable on demand at the main bank, the subsidiary bank at Rotterdam, and the branch offices. The latter, however, are allowed to take as much time as is required to get the coin needed from the main establishment. The notes are accepted in payment of Government dues, and are not subject to the stamp tax. The management of the Bank is carried on by a directorate consisting of the President, five directors, and a Secretary. The President and Secretary are permanent officers, and are appointed and removable by the Sovereign. The five directors are elected, though not at the same time, by the shareholders for a term of five years. The possession of five shares entitles a person to one vote, and every additional 10 shares give an additional vote. The general assembly of shareholders chooses 15 bank commissaries, who constitute a kind of advisory council for a term of five years. One-fifth of the number retire each year.

The capital of the Bank was originally five million florins (£416,666), but it has been raised at various periods, and is now 20 million florins, or £1,666,666. Although the Government originally received nothing from the Bank except the dividends on the shares taken by it when the Bank was started, it has in recent times changed its policy. The Bank was not altogether successful in its early days, and its position was not improved by the secession of Belgium and the troubles which followed. Therefore, there have been very many changes made in its Constitution. It is, however, unnecessary to specify these various alterations. It will perhaps be enough to say that the success of the National Bank of Belgium made a great impression upon the Dutch and their Government, and that the later reforms have been largely imitations or modifications of what was done in the case of the National Bank of Belgium. As already said, the Government many years ago sold the shares which it subscribed for to enable the Bank to be constituted. More recently, on renewing the charter, it insisted upon sharing in the profits of the Bank, following the example of both Belgium and Germany. At the present time 3½ per cent. is to be paid to the shareholders. Ten per cent. of what remains is to be assigned to the surplus until it is raised to 25 per cent. of the capital. Three per cent. of what then remains is to be allotted to the directors and commissaries. And if anything further remains the amount is to be distributed in the proportion of two-thirds to the State and one-third to the shareholders. In the year 1914-15 the Government's share of the profits was 4,119,000 florins, or £343,000. In case the privilege of note issue is not extended half the amount to which the surplus will have been increased in the period 1889-1919 is to go to the State. The Law of July 18, 1904, made all the notes of the Bank legal tender except in the case of payments made by the Bank itself. Of the total capital, one-fifth may be invested in Dutch Government bonds or other securities listed at the Amsterdam Exchange or other principal European exchanges. The list of such securities is determined by the directors and the Bank commissaries. Since 1863 the Bank has been authorised to issue drafts drawn by one of its offices upon another. It must keep a metallic reserve of 40 per cent. against the aggregate volume of such drafts outstanding. The use of drafts for a long time was confined within narrow limits by a tax. Since 1883 the tax, however, has been reduced. A draft is not permitted to circulate more than eight days.

In consequence of the great injury to credit caused by the outbreak of war in 1914, and the consequent demand for banking accommodation and for currency, the ordinance requiring a metallic reserve of 40 per cent. against bank-notes and other demand liabilities was changed and 20 per cent. substituted. These powers were utilised for a time, and in October 1914 the percentage fell to 32.59 per cent., but recovery soon took place, 40 per cent. being reached in December 1914 and 52 per cent. in March 1915.

The funds of the Bank are provided almost entirely by its note issue. Its total funds are now 591,000,000 florins, of which its note circulation provides 544,000,000 florins. Beyond the capital of 20,000,000 florins there is a reserve fund of 5,000,000 florins. The deposit accounts are less than 16,000,000 florins. It is necessary, of course, for the Bank to keep a large part of its funds in cash against its note circulation, and with cash and bullion in hand of 392,000,000 florins, the note circulation provided it with 152,000,000 florins of money for employment. These funds were used mainly in the discount of bills and in advances. How the Bank has obtained its resources, and the manner in which they are employed, are shown by the statement of liabilities and

assets herewith. The following contrast shows the influence of the war upon the Bank's activities:—

LIABILITIES.	1915 Oct. 9 Florins.	1914 Aug. 1 Florins.	Inc. or Dec. Florins.

* October 1915.

The net profit for the year to March 1915 reached 10,935,000 florins, equal to nearly 55 per cent. on the paid-up capital. Upon the paid-up capital and reserve the net profit was equal to nearly 43 per cent. Of this profit nearly 40 per cent. was paid over to the Government, and 2,620,000 florins were distributed in dividends at the rate of 13.1 per cent. The profits fluctuate with the average rate of interest. In the last 11 years the dividend has been as low as 7.8 per cent. and as high as 13.6 per cent. The course of the profits since 1905 will be evident from the statement appended:—

Profits of The Nederlandsche Bank.

Year ended Mar.31	Gross Profits. Florins.	Expenses. Florins.	Net Profit. Florins.	Due to the State. Florins.	Dividend. Amount. Florins.	Dividend. Rate. %	Special Apprns. Florins.	Carried Frwrd. Florins.
1915	13,252,561	2,317,184	10,935,377	4,119,629	2,620,000	13·1	4,186,934	16,148

1912	6,716,138	1,578,638	5,137,500	2,819,100	2,040,000	10·2	264,950	17,583
1911	7,425,185	1,553,675	5,871,510	3,390,799	2,340,000	11·7	149,661	4,133
1910	5,038,591	1,368,124	3,670,467	1,988,825	1,660,000	8·3	32,879	13,083
1909	5,387,561	1,338,039	4,049,522	2,220,828	1,760,000	8·8	62,280	24,320
1908	8,640,137	1,474,343	7,165,794	4,154,288	2,720,000	13·6	302,363	17,906
1907	7,603,975	1,364,984	6,138,991	3,397,349	2,320,000	11·6	400,967	28,763
1906	4,736,641	1,210,259	3,526,382	1,893,588	1,600,000	8·0	30,000	8,088
1905	4,617,757	1,245,646	3,372,111	1,796,325	1,560,000	7·8	16,624	5,294

The manner in which the profits fluctuate in accordance with the official minimum will be apparent by contrasting the above dividends with the rate of interest current. Of course the year 1914 was exceptionally profitable, and the Bank will doubtless continue to make great profits during the war, in consequence of the exceptional services it is rendering. The average discount rate in each year since 1864 has been as follows:—

Average Rate of Discount of the Nederlandsche Bank.

Year.	Rate. %	Year.	Rate. %	Year.	Rate. %	Year.	Rate. %	Year.	Rate %

NEDERLANDSCHE HANDEL-MAATSCHAPPIJ.

(NETHERLANDS TRADING SOCIETY.)

Head Office: Amsterdam.

Capital:—

Authorised F.75,000,000 (£6,250,000)

Subscribed and Paid up, in Shares of F. 1,000, F. 450 and F. 250, fully paid F.50,000,000 (£4,166,667)

THIS Company was established in 1824 by King William the First of the Netherlands for the avowed purpose of promoting commerce, industry, and navigation in the Netherlands and the Netherlands possessions in the East, and subsequently it had to act as agents for the State for the sale of the produce obtained from the population in Java under the system of compulsory cultivation introduced in 1830. The Nederlandsche Handel-Maatschappij may therefore be said to be remotely a continuation of the Dutch East India Company, which was dissolved in 1798.

When towards the last quarter of the nineteenth century the *culture* system was gradually abandoned and free agriculture and industry had reached a considerable development in the East Indian possessions, the Society shifted the scope of its business and turned to banking in the widest sense. Its connection with the State, however, remained much the same as before, its president, directors, and secretary being appointed by the reigning sovereign personally, who also nominates her own commissary as president of the board of commissaries.

The Society started with a capital of F. 37,000,000. In December 1913 it was resolved to authorise an increase of the capital to F. 75,000,000 (£6,250,000), and to issue forthwith F. 5,000,000 (£416,667), so that the present paid-up capital amounts to F. 50,000,000 (£4,166,667). These measures were rendered necessary in order to cope with the steadily growing business of the Society, especially abroad, the number of its branches having risen from 17 in 1900 to 30 in 1914. Of these 24 are established in the Dutch dominions and 6 outside Netherlands India —viz. Singapore. Penang, Rangoon, Surinam, Shanghai, and Hong Kong, where the Society has in the course of the last 10 years acquired a prominent position among the banks.

The Society owns several sugar estates in Java, which are reckoned amongst the best on that island and yield very fair profits. Having regard to the moderate amount for which they figure in the books they form a very valuable asset (F. 9,372,686= £781,058), backed as it is by a reserve of F. 2,000,000 (£166,667), which has been provided out of profits. This reserve forms part of the £1,194,763 above stated.

Herewith we set out the liabilities and assets of the Company for each year since 1903.

The gross profits for 1914 have amounted to £721,704, as compared with £758,656. After providing for expenses, &c., there is a net balance of £476,949, as compared with £479,770. The dividend has been reduced from 9½ per cent. to 8 per cent., while a sum of £107,278 has been carried to special reserve, and £35,294 to the statutory reserve. The profit record since 1904 is appended:—

The proportion that the shown net profit bears to the paid-up capital is 11.5 per cent.; to capital and reserve combined, 8.9 per cent.; and to the total working resources of the Society, 2.3 per cent.

NETHERLANDS BANK OF SOUTH AFRICA.

Head Office: Amsterdam.
London Office: 2 Great Winchester Street, E.C.

Capital—
Authorised, 12,500 Shares of £60 each ... £750,000
Paid up, 4,000 ,, ,, ... 240,000
Price of Share, 55%. *Dividend,* 3%. *Yield,* £51 0s.%.

The Netherlands Bank of South Africa was registered as a limited liability Company in Holland in March 1888, but commenced its operations only in the beginning of 1889. It started by opening an office in Pretoria, which afterwards became the head office for South Africa. In 1890 a branch was opened at Johannesburg, and in the following year another one at Potchefstroom. At its registration the nominal capital was £200,000, consisting of £100 shares, of which £50,000 was issued and fully paid up. In 1889 and 1890 a further £50,000 and £60,000 of fully-paid shares were issued. The Bank continued its operations on this footing until 1895, when the nominal capital was increased to £400,000 with £250,000 issued, and since then its business has gradually extended. In Pretoria and Johannesburg new offices were found necessary and the Bank commenced putting up the large buildings on Church Square, Pretoria, and in Fox Street, Johannesburg, which were occupied in 1897 and 1896 respectively, and are still in use. About the same time a further issue of £50,000 capital was made and another branch established at Brugspruit, in the Middelburg coal district, which has since been transferred to Witbank. The next issue of £100,000 capital, by which the whole nominal capital of £400,000 was issued and paid up, was made soon after the war in 1903. The Bank, which in the past had confined its field of operations to the Transvaal, then established a branch at Cape Town. In 1904 branches were opened at the Premier mine and at Witbank, and in 1905 a branch at Bloemfontein. At about that time the Bank also commenced to extend its European business by establishing an agency in London, which was opened in June 1906. The head office has from the beginning been in Amsterdam. In 1910 the authorised capital was reduced to £750,000, in £60 shares, and the paid-up capital was reduced to £240,000 from £400,000.

Herewith we set out the liabilities and assets for each year since 1905.

The Bank has followed a conservative policy, and during the years of depression and stress through which South Africa passed a few years ago in order to insure the safety of its deposits it stopped paying dividends from 1906 to 1909. Moreover, as stated, its capital has been cut down from £400,000 to £240,000. For 1889, 6 per cent. was paid; for 1890, 3 per cent.; for 1891 to 1893 inclusive, 4 per cent.; for 1894, 5 per cent.; for 1895, 6 per cent.; for 1896 and 1897, 5½ per cent.; for 1898, 5 per cent.; for 1902 and 1903, 7 per cent. each; for 1905, 3 per cent. For 1910 the rate was 4 per cent., a rate which was maintained for each of the next three years.

During the whole of 1914 the position of affairs in South Africa was uncertain. In the beginning of the year a general strike broke out, and though it was energetically suppressed by the Government, the fear that it might break out again affected the business and the country generally, and the report of the Bank for the year pointed out: "Owing to the unsatisfactory harvests in previous years we had been very cautious in giving credit, and the strike induced us to exercise even more caution in that direction. Through this policy our cash and liquid assets increased considerably, and when the European war suddenly broke out in the beginning of August the cash position of our institution was, therefore, an exceptionally strong one. The consequence of the War and the subsequent occurrences in the Transvaal and Orange Free State further restricted trade in and exports to South Africa, and, consequently, there was very little demand for money, which circumstance further increased our liquid assets, but also considerably reduced our opportunity for earning profits."

During the first eight months of the year the profits were only slightly less than during the corresponding period of the previous year, but for the whole of 1914 the net profit is shown as £9,972, as compared with £13,172. The dividend has accordingly been reduced from 4 per cent. to 3 per cent., while £2,500 has been carried to the reserve. Here-

THE Danish Rigsbank, established in 1813, acted for Norway as well as for Denmark. In the following year, however, the new Government of Norway resolved to replace the branch of the Danish bank by an independent Norwegian Rigsbank, and to redeem notes of the former by those of the latter. Within a few years, however, it was found advisable to wind up the new Bank and to establish in its place the Bank of Norway. The funds for the capital of the new Bank were provided by a property tax. The capital was 2,000,000 specie dalers, and a further tax was to be levied of 2,000,000 bank dalers to provide for the retirement of part of the excessive issues. In 1818 the remainder of the notes were redeemed by means of a loan, but at a greatly reduced value—in fact, only $\frac{3}{5}$ths of their face value. The new Bank of Norway was granted a monopoly of note issues. At first the law permitted the issue of notes to double the amount of silver held by the Bank; but this led to so much larger circulation than was needed that it was not until 1842 that the notes became really redeemable. In 1892 the present organisation of the Bank was carried out by a law of that year. The fiduciary issue was fixed at 24 million kroner. Of the gold held against the redeemable notes, one-third may be held abroad, that is to say, foreign credits payable on demand in gold may be treated for the purpose of note issue as gold held at home. In addition, a sum not exceeding 3,000,000 kroner may be held in those countries with which Norway has entered into currency conventions, so that, of the balances held to the credit of the Bank of Norway in the Swedish Rigsbank and the Danish National Bank, the sum of 3,000,000 kroner may be accounted as equivalent to cash in hand. Of the profits of the Bank of Norway 6 per cent. is paid as dividend to the shareholders; one-tenth of the balance must be added to the reserve so long as it is less than 5,000,000 kroner. The remainder is divided equally between the State and the shareholders until the latter have received 10 per cent., beyond which the State takes three-quarters of any excess and the shareholders one-fourth. At present there are 20 branches of the Bank. The control of the Bank is entirely in the hands of the Government. The President of the Managing Committee of five is appointed by the Crown; the other members by the Parliament, which also elects the 15 members of the board of directors. Thus the private shareholders have no influflence, as such, on the affairs of the Bank. The managers of the branches are also appointed by Parliament, their term of office being six years. The accounts of the Bank are required to be submitted to a special Committee of Parliament annually, Parliamentary supervision replacing that of a shareholders' meeting. While the Bank of Norway has a monopoly of note issue, all other branches of banking are open to any person who chooses to enter into it. There are, in fact, nearly 100 banks in existence in the kingdom.

The capital of the Bank from 8,110,000 kroner in 1830 has been gradually increased until it now reaches 25,000,000 kroner, while the reserve fund has steadily risen until it is now 13,362,000 kroner. Thus the total capital and reserve amount to 38,362,000 kroner, or £2,130,000. A large portion of the Bank's funds is, however, provided by the notes in circulation. The note circulation was appreciably increased by the outbreak of war, which created a demand upon the Bank for loans and discounts, which at the end of last year amounted to 114 million kroner. The consequence was that, with notes in circulation of 134 million kroner at the end of December, the cash held both at home and abroad was only 69,604,000 kroner, a proportion of 32 per cent. As the War has progressed, however, it has brought renewed prosperity to Norway,

and although the note circulation has further risen to about 150,000,000 kroner, the loans and discounts have fallen to 74,556,000 kroner, while the gold and foreign balances have jumped to nearly 130,000,000 kroner, equal to 87 per cent. of the note circulation. The effect of the War on the position of the Bank is reflected by the following comparison:—

Norges Bank (Bank of Norway).

	1915 Oct. 7 Kroner	1914 July 31 Kroner	Inc. or Dec. Kroner
Gold	63,990,000	53,280,000	+10,710,000
Balance abroad and foreign bills	65,826,000	30,204,000	+35,622,000
Government securities	14,058,000	8,874,000	+ 5,184,000
Discounts and loans	74,556,000	87,624,000	−13,068,000
Notes in circulation	149,796,000	121,536,000	+28,260,000
Deposits at notice	23,418,000	14,274,000	+ 9,144,000

The steady expansion in the note circulation of the Bank and in the capital are shown by the statement of liabilities and assets herewith.

The profits last year amounted to 4,018,000 kroner, equal to 16 per cent. on the paid-up capital. On the paid-up capital and reserve they were equal to 10.5 per cent. Thirty-eight per cent. of the profits were paid to the State, and the balance was distributed in a dividend of 10 per cent. upon the share capital. The profits earned and the dividends distributed since 1904 have been as follows:—

Profits of the Norges Bank (Bank of Norway).

Year to Dec. 31	Gross Profit. Kroner.	Expenses. Kroner.	Net Profit. Kroner.	Proportion Due to the State. Kroner.	Div. Amt. Kroner.	Rate. %	Special Appropriations. Kroner.	Carried Fwd. Kr.

Price per Share, 582. *Dividend,* 6⅔ %. *Yield,* 3·75 %.

THE Oesterreichische Credit-Anstalt für Handel und Gewerbe was constituted by Royal charter granted by his Apostolic Majesty on October 31, 1855, to a group of the most distinguished men of Austria. This group was headed by Prince zu Fürstenberg, and included Prince von Schwarzenberg, Prince of Auersperg, Counts von Chotek and von Heber, and the houses of Rothschild. Throughout its history the Bank has enjoyed the patronage and goodwill of the governing classes of the country. Indeed, it was formed to assist the Government to improve the economic condition of the country and to rectify the disordered condition of the finances. When one contrasts the economic and financial condition of Austria before the War with the state of its affairs in 1856 one realises how great was the change effected in its welfare in a period of 60 years. At that time credit was almost unknown and rates of interest were exorbitant. The currency was seriously depreciated and economic conditions generally were in a state of chaos. The efforts of the men who controlled the policy of the Bank to restore order into the finances of Austria and to strengthen the economic condition of the country were again and again frustrated by the frequent wars into which the country was plunged or was dragged. Within three years of the constitution of the Bank the country was forced into war by France. In 1864 Austria joined Prussia in her war against Denmark, and in 1866 the country was at war with Prussia. In 1873 came the *Krach* in Vienna, which shook Austrian credit institutions to their foundations. Nevertheless, in spite of all obstacles, the country advanced both financially and economically. What the effect of the present War will be has yet to be discovered.

The economic progress of the country was, however, very slow until the currency was reformed in

1892 and the gold standard introduced. Since then the whole situation has been completely changed, and capital has been obtainable from abroad for investment in Austrian industries of all kinds. In the provision of banking facilities which the expansion of industry demanded the Credit-Anstalt has played a leading part. Throughout its history it has participated in the issue of Government loans, and latterly it has followed the German practice of providing the industrial establishments of the country with the capital they have needed for their development. It has been specially active in providing capital for the expansion of the mineral resources of the whole country. It has also taken a keen interest in the export trade, and has provided a great deal of money for progressive manufacturing firms desirous of extending their businesses both at home and abroad. Moreover, its policy was not actuated by any narrow feelings of jealousy. It realised the need of the country for extensive banking facilities, and not only did it open a large number of branches in the chief towns, but it promoted and assisted to promote a number of other banking and credit institutions to operate both in Austria and in foreign countries. In fact, it has contributed in no small degree to the general progress of the country and of its industries of all kinds and descriptions.

Moreover, notwithstanding all the difficulties with which it was faced, it has been a profitable institution. Only twice, in 1865 and in 1876, have the dividends been under 5 per cent., while in recent years they were over 10 per cent., after substantial allocations have been made to reserves. Last year the dividend was reduced to 6⅞ per cent. by the War. In 1856 the paid-up capital was 64,000,000 kronen, and was shortly after increased to 120,000,000 kronen. It was found, however, that this large amount of capital could not be profitably employed, and it was decided to repay 40,000,000 kronen to the shareholders. In 1899 the capital was raised to 100,000,000 kronen, in 1906 to 120,000,000 kronen, and in 1911 to 150,000,000 kronen, at which figure it still remains. The accumulation of reserves was somewhat slow. In 1870 the reserve fund amounted to over 4,000,000 kronen, but in the following decade it had to be written down substantially in consequence of the severe losses which fell upon everyone. By 1895 it had been raised to 16,500,000 kronen, and with the aid of the additional capital issued at a premium it was increased to 40,000,000 kronen in 1899. At the end of last year it was 101,000,000 kronen. Thus the total capital and reserve of the institution at the end of last year was as much as 251,000,000 kronen, or £10,500,000. In consequence of the wars and difficulties of its earlier years the deposits, which at the end of 1856 amounted to 85,000,000 kronen, were reduced in 1860 to 53,000,000 kronen. In the next 10 years they increased to the large total of 225,000,000 kronen, but owing to the events of the seventies, and the low state of the country's credit at that time, they were seriously reduced, and in 1880 were still no more than 166,000,000 kronen. From that time to this they have shown substantial expansion, amounting in December last to 1,055,000,000 kronen, or £44,000,000. In its earlier days the Bank employed most of its money in loans to the Government, and in 1860, out of its total funds of 201,000,000 kronen, its investments amounted to 84,000,000 kronen. With the industrial development of the country it has employed an increasing proportion of its funds in loans to manufacturers and traders and in the discount of bills, and at the end of 1914 its sundry debtors amounted to 946,000,000 kronen, and it had bills in its portfolio amounting to 215,000,000 kronen. Its advances on securities were no more than 43,000,000 kronen.

While the War has not interfered with the rapid growth of the institution it has seriously affected its profits. The deposits last year in consequene of the War increased nearly 200,000,000 kronen, and most of this money was employed in loans to manufacturers and others. Nevertheless, its net profit declined from 19,664,000 kronen to 13,473,000 kronen. The dividend was reduced from 10⅝ per cent. to 6⅞ per cent. The profits and dividends in recent years have been as follows:—

Profits of the Oesterreichische Credit-Anstalt für Handel und Gewerbe.

Year to Dec. 31	Gross Profit. Kronen.	Expenses,* &c. Kronen.	Net Profit. Kronen.	Dividend.— Amount. Kronen.	Rate. %	Special Allocations. Kronen.	Carried Forward. Kronen.

* Includes taxes as follows:—1914, Kr. 3,226,711; 1913, Kr. 4,632,017; 1912, Kr. 3,915,621; 1911, Kr. 3,864,881; 1910, Kr. 3,066,617; 1909, Kr. 2,912,662; 1908, Kr. 2,521,489; 1907, Kr. 2,447,038; 1906, Kr. 2,610,794; 1905, Kr. 2,052,212; 1904, Kr. 1,957,311.

The great expansion in the deposits of the institution, both last year and since the Bank was started, is shown in the statement of assets and liabilities herewith.

OESTERREICHISCHE LANDERBANK.

Head Office: Vienna.
London Office: 9 Bishopsgate, E.C.

Capital—
Authorised, 400,000 Shares of Kr. 400 ... Kr. 160,000,000
Issued, 325,000 Shares of Kr. 400, fully paid Kr. 130,000,000
Price per Share, 437. *Dividend*, Nil. *Yield*, Nil.

The Kais. Kön. Privilegirte Osterreichische Länderbank was established in 1880 as a general banking business, with power to participate in the founding, financing, and managing of other banking concerns or industrial, agricultural, commercial, and municipal undertakings of any kind. The original authorised capital was 100,000,000 francs, equal to Fl. 40,000,000 gold, in 400,000 shares of Frs. 250 each, of which Frs. 125 were paid up, and this was changed in 1886 into 200,000 shares of Frs. 250, fully paid. In 1905 the capital was raised to Kr. 100,000,000 by the issue of 50,000 new shares of Kr. 400, and again in 1910 to Kr. 130,000,000 by the issue of 75,000 new shares of Kr. 400; there being now in existence 325,000 shares of Kr. 400. There is, moreover, power to increase the capital to a total of Kr. 160,000,000 by the issue of another 75,000 shares. The Bank has branches in Paris, Prague, London, Graz, Reichenberg, Pilsen, and Teplitz, besides 30 sub-branches.

A leading part was taken by the institution in the creation of the Banque de Crédit Serbe, the Banque de Crédit Roumain, the Banque Populaire de Galicie pour L'Agriculture et le Commerce, and holds the greater part of the shares of these institutions. The Bank is also largely interested in the Ungarische Escompte und Wechslerbank, Budapest, and the Deutsche Effecten und Wechsler Bank, Frankfort-on-Main.

The institution, starting with 36,000,000 kronen of current accounts and deposits in 1880, in December last had 600,000,000 kronen, its progress since 1900 having been specially rapid. Its reserve fund has been strengthened mainly out of profits, and starting with 14,500,000 kronen in 1880, it has since been raised to 26,000,000 kronen. The total capital and reserve at the close of 1914 was 156,000,000 kronen, or £6,500,000, representing a proportion of 18.8 per cent. to its total liabilities.

The funds of the Bank are employed mainly in "Current accounts and in other liabilities." At the end of last year the sum employed in this manner was 475,000,000 kronen. Its bills receivable were 167,000,000, advances stood at 30,000,000 kronen, syndicate participations amounted to 48,000,000 kronen, while investments were nearly 74,000,000 kronen. The funds placed with the institution and the manner in which they were invested are shown by the statement of liabilities and assets herewith.

The War, by cutting off the foreign trade of Austria, has appreciably affected the Bank. On the one hand, it caused its deposits and current accounts largely to increase, and, on the other, reduced its bills payable by nearly one-half, the bills payable at the end of last year having been only 56,000,000 crowns, against 109,000,000 crowns a year previously. The Bank has found it desirable to increase its cash balance, though the proportion of cash to the total liabilities is still no more than 4 per cent. The gross profit of the institution was last year greatly reduced, while its expenses increased. Hence the net profit fell from 13,209,000 crowns to 8,023,000 crows, and the directors decided to pay no dividend whatever, whereas in the previous year a distribution of 7½ per cent. was made. The sum allocated to reserve, &c., was 8,700,000 crowns. The serious drop in the profits last year is shown by the following statement:—

Profits of the Oesterreichische Landerbank.

Year to Dec. 31	Gross Profit. Crowns.	Expenses.* Crowns.	Net Profit. Crowns.	Dividend. Amount. Crowns.	Rate. %	Special Allocations. Crowns.	Carried Forward. Crowns.

* Includes taxes as follows, expressed in crowns:—1914, 2,970,880; 1913, 2,933,170; 1912, 2,715,547; 1911, 2,305,486; 1910, 1,760,604; 1909, 1,527,165; 1908, 1,662,442; 1907, 1,562,570; 1906, 1,485,175; 1905, 1,169,030; 1904, 1,066,836.

As the manner in which enemy banks in London are permitted to carry on banking business, subject to certain specified limitations and conditions, is of interest to bankers in all parts of the world, we give herewith the text of the amended permission under which the London branch of the Länderbank is worked:—

"In pursuance of the powers conferred on me by the Aliens Restriction (No. 2) Order in Council, 1914, made on the 10th day of August under the Aliens Restriction Act, 1914, I hereby permit the Oesterreichische Laenderbank and the Anglo-Austrian Bank to carry on banking business in the United Kingdom, subject to the following limitations, conditions, supervisions, and requirement as to the deposit of money and securities:—

"1. The permission shall extend only to the completion of the transactions of a banking character entered into before the 13th day of August, 1914, so far as those transactions would, in ordinary course, have been carried out through or with the London establishments. The permission does not extend to any operations for the purposes of making available assets which would ordinarily be collected by, or of discharging liabilities which would ordinarily be discharged by, establishments of the banks other than the London establishments. No new transaction of any kind, save such as may be necessary or desirable for the purpose of the completion of the first-mentioned transactions, shall be entered into by or on behalf of the London establishments of the banks.

"2. The business to be transacted under this permission shall be limited to such operations as may be necessary for making the realisable assets of the banks available for meeting their liabilities, and for discharging these liabilities as far as may be practicable.

"3. All transactions carried out under this permission shall be subject to the supervision and control of a person to be appointed for the purpose by the Treasury, who shall have absolute discretion—

"(*a*) To refuse to permit any payment that may appear to him to be contrary to the interests of the nation.

Authorised and Subscribed, 150,000 Shares of Kr. 1,400, fully paid ... ... Kr. 210,000,000
Price of Shares, 2,000%.

ON the declaration of war the Austro-Hungarian Bank suspended the publication of its weekly statements and, therefore, no information is available as to its operations since July 1914. There is a report that the gold held by the Bank has been transferred to Berlin to enable the note circulation of Germany to be largely increased. Whether or not this report is well founded cannot be decided in the absence of information. We would point out, however, that the great Austrian banks which normally have no cash in their possession have substantially increased their cash reserves since the War began, and appear to be relying to a much greater extent than usual on their cash resources. This would seem to indicate greater difficulty in obtaining cash from the State Bank, and the need of these banks, therefore, to be more self-contained than usual. Normally the joint-stock banks do not need to hold cash as they are able to obtain whatever supplies they require at a moment's notice. Probably what has happened is that the note circulation of the State Bank has been so greatly increased that it is considered to be undesirable to publish the amount either of the notes in circulation or of the gold held against them. We set out below a comparison of the last statement issued by the Bank with that of a year previously, from which it will be seen that during the twelve months the Bank somewhat strengthened its position:—

	1914. July 23. £	1914. July 23. Kronen.	1913. July 23. £	1913. July 23. Kronen.
Gold	51,578,000	1,237,879,000	50,579,000	1,213,896,000

Above (−) or below (+) legal maximum ...	+2,479,000	+59,490,000	−1,655,000	−39,720,000
Other securities ...	31,993,000	767,831,000	32,720,000	785,280,000

After 1866 it became indispensable that Austria and Hungary should work amicably together, and for that purpose it became necessary that great reforms should be introduced. Accordingly it was arranged that the Monarchy should call in all the irredeemable paper money, and for that purpose should establish a common bank, which should be charged with the task of substituting bank-notes for Government notes, of accumulating a specie reserve, and of regulating, as far as was possible, the foreign exchanges. Hence it was thought requisite to wind up the National Bank, to put in its place the Austro-Hungarian Bank, and, at the same time, to give the whole Monarchy one single currency. The old monetary system was, therefore, abolished, and the unit was declared to be the crown. For convenience sake the crown is usually said to be worth 10*d.* in English money, and for most practical purposes that is near enough to the reality. The charter granted to the Bank was for 10 years, and, practically speaking, it has been renewed again and again every 10 years with considerable changes. However, it would be tedious and not instructive for the general reader to enter into minute details of these changes. It will be sufficient, therefore, if we give the existing constitution. The capital amounts to 210 million crowns, or 8¾ millions sterling. It is provided by the public. And the profits earned are distributed, first, in a divi-

dend equal to 4 per cent. to the shareholders. If there is a surplus 10 per cent. is added to the reserve and 2 per cent. allocated to the pension fund. If there is still a surplus another 2 per cent. dividend is paid to the shareholders and an equal amount paid to the States; if a surplus remains another 1 per cent. dividend is paid to the shareholders and twice the amount accrues to the States. If there is still a surplus after 7 per cent. dividend is paid to the shareholders one-fourth of the balance accrues to the shareholders and three-fourths to the States. The profits of 1913 were 46,279,000 kronen, and out of this sum 22,374,000 kronen, or rather less than one-half, accrued to the States and under 24,000,000 kronen accrued to the Bank. Out of the latter sum a dividend of 9.221 per cent. was paid, calling for 19,365,000 kronen, and there were special allocations amounting to 4,545,000 kronen as provided by the charter. As Austria contributed to the redemption of the Government paper money 70 per cent. and Hungary only 30 per cent. it was further agreed that the distributions from the Bank's profits to the States should be in the proportion of 70 per cent. to Austria and 30 per cent. to Hungary. Nevertheless, Hungary insisted that she should have an equal voice with Austria in the management of the Bank. Therefore, the supreme authority is vested in a Governor appointed by the Emperor; two Deputy-Governors, one appointed by the Austrian Finance Minister, the other by the Hungarian Finance Minister; and two assistants to the Deputy-Governors, appointed in the same way. Furthermore, there is a council of twelve, selected by the two Governments. Six of these must be Austrian citizens, and the remaining six Hungarian. Lastly, it is provided that the general meetings of shareholders are to be held, if possible, alternately, but, at all events, as nearly alternately as possible, in Vienna and in Buda-Pesth. In addition to all this, two Government Commissaries are empowered to take part in the deliberations of the Executive Committees and of the Standing Committees. Each one of them may protest against any resolution which to him seems injurious to the half of the Monarchy he represents, and it must be dropped in consequence. The Commissaries, moreover, are permitted to acquaint themselves with the details of the management of the Bank. Practically, it will be seen that the Governments have absolute control over the management of the Bank.

As part of the financial reform thus entered upon it was determined to adopt the single gold standard. The Bank was commissioned, in the first place, to accumulate gold, and for that purpose the Government handed over to it the gold it held. It had borrowed largely to redeem the Government's irredeemable paper, and it enabled the Bank to replace that paper with its own notes by giving to it a considerable portion of the moneys so borrowed. The Bank is required to buy gold, just like the Bank of England is, at specified rates, and to deliver gold to all requiring it. And it is further required to pay special attention to the foreign exchanges. In fact, the task undertaken in some respects resembles the change of standard in India in the nineties. Austria was a debtor country. It was very improbable, therefore, that she would be able to maintain a gold currency and a gold standard except extraordinary precautions were taken. One of these precautions was to authorise the Bank to reckon amongst its gold foreign gold bills. Holding large amounts of such bills, watching the course of the exchanges, and incessantly dealing in them, the Bank has acquired

exceptional skill and experience, and it really has succeeded to a surprising degree in maintaining the gold standard. At the same time, it is to be borne in mind that the Bank is to all intents and purposes a Government institution. For the time being its shareholders are private citizens. But there is an agreement between the two Governments and the Bank that at the end of any 10 years the private citizens may be bought out. In any case, the whole management is vested exclusively in Government officials. Therefore, it is well understood that to withdraw gold from the Bank when it is not desirable that it should be withdrawn is to incur the displeasure both of the Bank and of the Government. It will, then, be clearly understood that one of the purposes for which the Austro-Hungarian Bank was created was to watch over and protect the exchanges. The other purpose, of course, was to perform the offices of a great central bank. To attain the end aimed at the Bank is given the exclusive right of note issue. It is bound to hold up to 200 million crowns in gold, gold bills being reckoned, without paying any duty to the Government. But if it issues beyond that sum without possessing the metal it has to pay, as the German Reichsbank has also to do, a duty to the Government at the rate of 5 per cent. per annum. In this way it was hoped that the Bank would not flood the country with unnecessary paper. This provision is probably suspended at the present time.

The note circulation of the Bank, which in 1878 was only 578,000,000 kronen, and in 1890 amounted to no more than 891,000,000 kronen, rose to 1,585,000,000 kronen in 1900 and to 2,494,000,000 kronen at the end of 1913. This increase in the notes was attended by an expansion in the cash held from 307,000,000 kronen to 1,502,000,000 kronen. Whereas in 1878 the note circulation exceeded the cash held by 270,000,000 kronen, at the end of 1913 the excess was nearly 1,000,000,000 kronen, after in the previous year having been much as 1,368,000,000 kronen. The great excess of notes over the cash held at the end of 1912 caused the Bank to pay a large sum to the Government in tax on its excess issue. But the retirement of notes and the increase of cash that afterwards took place caused the excess note issue almost to disappear. By means of this great note circulation the Bank obtained cash resources for banking purposes amounting to £57,000,000 at the end of 1912, and to £41,000,000 at the end of 1913. In July last the difference between the cash and the note circulation was about £25,000,000. The capital and reserve of the Bank have shown no great increase for many years. In 1878 they amounted to 222,000,000 kronen, and at the present time are still only 256,000,000 kronen. At the end of 1913 the Bank had issued 291,000,000 kronen of Mortgage bonds, and its total resources of all kinds thus reached 3,313,000,000 kronen. Of this money, it retained 45 per cent. in cash, and it placed nearly 30 per cent. in bills and 20 per cent. in advances. Investments were very small, amounting to only 20,000,000 kronen. The sources from which the Bank derives its funds, and the manner in which they are employed, are shown by the statements of assets and liabilities herewith.

In 1890, prior to the introduction of the gold standard in 1892, its stock of gold was only 108,000,000 kronen. By 1900 the amount had been increased to 920,000,000 kronen, and in July 1914 the gold held was 1,240,000,000 kronen. The stock of silver in 1890 was as much as 330,000,000 kronen, and in July last the amount was 291,000,000 kronen. The amount of gold accumulated by the Bank since the reform of the currency in 1892 is shown by the following statement:—

Gold and Silver Holdings of the Oesterreichisch-Ungarischen Bank (Austro-Hungarian Bank).

OLD COLONY TRUST COMPANY.

Office: Boston, Mass., U.S.A.

Capital—
Authorised and Subscribed 60,000 Shares of $100, fully paid $6,000,000
Price of Shares, 259%. *Dividend*, 10%. *Yield*, 3.875%.

THE Old Colony Trust Company of Boston commenced business in June 1890 with a capital of $1,000,000. This was increased in 1903 to $1,500,000 and in 1910 to $2,500,000. In 1911 it was further increased to $5,000,000 by the declaration of a dividend of 100 per cent. This extra dividend, it was announced, was not payable out of the accumulated earnings, but out of the sums received by the Company as premiums from the previous issues of stock. In 1912 the capital was raised to $6,000,000, at which figure it now stands. The reserve, after increasing to $10,000,000 in 1910 and being reduced to $7,500,000 by transfer to capital, was increased to $8,000,000, and in the current year has been reduced to $5,000,000. Including undivided profits the capital and reserves amount to $12,414,000, equal to 10.7 per cent. of the total liabilities. The deposits between 1900 and 1911 grew from $19,000,000 to over $90,000,000, partly in consequence of the absorption in 1909 of the City Trust Company. The monetary pressure of the last two years tended to reduce the deposits, and in 1913 they were $75,550,000; they have now risen to $103,057,000. Most of its funds are employed in loans and in the discount of bills.

Prior to the stock distribution in 1910 the dividends were at the rate of 20 per cent. per annum, but since the capital was so substantially increased the dividends have been 10 per cent. The profits of the Company since 1904 have been as follows:—

Net Profits of Old Colony Trust Company.

Year to Oct. 31	Net Profits.	Dividend. Amount.	Rate	Transferred to Surplus Fund	Undivided Balance.

PHILADELPHIA NATIONAL BANK.

Office: Philadelphia, Pa., U.S.A.

Capital—

Authorised and Issued, 15;000 fully-paid Shares of $100 each (no liability) $1,500.000

Price of Share, 441%. *Dividend;* 16%. *Yield,* 3.64%.

THE Philadelphia National Bank is now among the great banks of the world, its deposits having reached $88,000,000, or £18,000,000. Its growth indicates the steady progress of the Quaker city, founded over 300 years ago by William Penn. It was in Philadelphia that the first continental Congress assembled, the Declaration of Independence was signed, the Constitution of the United States was drawn up, and the first President of the United States resided. From the day the city was founded it has made steady and solid progress, until at the present time its population numbers 1,700,000, who find employment in the manufacture of machinery, locomotives, ironware, ships, carpets, woollen and cotton goods, leather, sugar, drugs, chemicals, and other products; while it is the headquarters of the two principal railways of the State of Pennsylvania—the Pennsylvania Railroad and the Philadelphia and Reading.

Banking in Philadelphia commenced at a very early stage in its history, and among the earliest institutions was the Philadelphia National Bank, which was formed in 1803 for the purpose of promoting and assisting the industries of the city. In no small measure has the expansion of Philadelphia as a port and as a manufacturing centre been due to the banking accommodation it has enjoyed, and the progress of the Philadelphia National Bank gives a very fair idea of the progress of the city. In the early days of last century the population was small and the volume of business correspondingly light; but with the construction of the Pennsylvania Railroad business grew much more rapidly, and since the country recovered from the effects of the Civil War the progress has been rapid. In 1816 the deposits of the Bank were only $859,000, business still being affected by the injury to commerce and to the trade of Philadelphia of the European wars. By 1875 the deposits had grown to nearly $5,000,000, and in 1900 they reached $25,000,000. From that time to this the expansion has been phenomenal, and in 15 years the deposits have grown to $72,050,000, an expansion of $47,000,000, or 188 per cent. From its earliest days the Bank has been in a position of great strength. In 1816, with liabilities of only $1,300,000 for deposits and notes in circulation, the capital and reserve amounted to over $2,000,000. Subsequently the capital was reduced from $1,800,000 to $1,500,000, at which it has stood for many years.

But the reserve fund was gradually built up, until at the end of June last it was over $5,000,000, so that the total capital and reserve now amounts to $6,543,000. The rapid growth in the business is inducing the directors to devote a large part of the profits to reserves, and in the last three years the surplus has increased about $900,000. The steady growth in the business of the undertaking will be evident from the statement herewith.

A large part of the Bank's money is employed in the discount of bills, and now that the Bank is prepared to go into foreign business its letters of credit and acceptances are increasing. The amount of these at the end of June last was $3,578,000. In the last 10 years the rate of dividend has been raised from 10 per cent. to 16 per cent., while the profit in proportion to capital has increased to a much greater extent, the appropriations now being much greater than they were 10 years ago. Indeed, the Bank could largely increase its capital without needing to reduce its dividend. Doubtless in this period of war a very conservative dividend policy will be pursued, and great additions made to the reserve funds. The profits and dividends of the Bank are as follows:—

Profits of the Philadelphia National Bank.

Year to May 1	Gross Profits.	Expenses.	Net Profits.	Dividend. Amt.	Rate.	Special Apprns.	Undivided Surplus.

RUSSIAN BANK FOR FOREIGN TRADE.

Head Office: Petrograd.
London Office: 61 and 62 Gracechurch Street, E.C.

Capital—
Authorised, and Issued, 240,000 Shares, of Roubles Rbls. 250, fully paid (no further Liability)... 60,000,000
Price per Share, 285. *Dividend,* 1914, 6%. *Yield,* 5.26%.

The Russian Bank for Foreign Trade was established by Imperial sanction in 1871 for the purpose of developing the foreign commerce of the country, and it is playing an important part in the agricultural development of Siberia. The Bank was founded in co-operation with a number of well-known English bankers, including Messrs. Glyn, Mills, Currie and Company, and Messrs. Matheson and Company, Limited. Its success was a very limited one until the recovery in the prices of agricultural produce brought great prosperity to the agricultural countries. From 1872 to the later 'nineties its expansion was, indeed, very slow, but since 1900 its development has been of a striking character, and has called for a constantly increasing capital. In 1872 its capital was 3,000,000 roubles; in 1880 it was 7,500,000 roubles; in 1890 it was increased to 20,000,000 roubles; in 1907 to 30,000,000 roubles; in 1910 to 40,000,000 roubles; in 1911 to 50,000,000 roubles; and in 1914 was increased to 60,000,000 roubles.

The new issues of shares at substantial premiums have largely assisted in building up the reserve fund, and whereas in 1895 the reserve was only 1,387,000 roubles, it was 21,970,000 roubles on December 31 last. The capital and reserve fund are now about 82,000,000 roubles. The deposits and current accounts of the Bank are increasing rapidly, and from about 11,000,000 roubles in 1895 have now grown to 397,000,000 roubles. The Bank is also liable in respect to correspondents for 119,000,000 roubles, and on account of acceptances and outstanding cheques for a further 29,000,000 roubles. Its total funds reach the great sum of 631,000,000 roubles, or £63,000,000. Inasmuch as the Bank of Russia is entrusted with the duty of providing the country with as much currency as it needs this Bank does not require to keep idle any appreciable amount of cash, and its cash holding is no more than is needed to meet its everyday requirements. The funds of the Bank are employed mainly in advances and in the discount of bills. The great expansion in the business of the Bank in recent years will be appreciated from the statement of liabilities and assets herewith.

The outbreak of war in the summer of 1914 has had no great effect upon the position of the Bank. By stopping imports and exports it has compelled the Russian people to be more self-contained, and has thus stimulated industrial expansion.

The net profit of the institution for 1914 reached 4,234,000 roubles, equal to a dividend of over 7 per cent. The dividend paid was 6 per cent. The profit would have been much larger but for the action of the

The Bank is rapidly extending its branches throughout Russia, and now possesses agencies in a number of the more important European centres with which Russian merchants have special business connections.

RUSSIAN COMMERCIAL AND INDUSTRIAL BANK.

Head Office: Petrograd.

London Office: 24 and 28 Lombard Street, E.C.

Capital—

Authorised and Issued, 140,000 Shares of Rbls. 250, fully paid Rbls.35,000,000

Price per Share, £27½. *Dividend*, 3.6%. *Yield*, 3.06%.

The great prosperity and progress of Russia since 1900, largely in consequence of the prosperity which all agricultural countries have enjoyed by reason of the great demand for foodstuffs and the profitable prices that have ruled, have brought a great expansion of banking in Russia, and the deposits of the banks have shown remarkable growth. The outbreak of war in the summer of 1914 has not hitherto had any appreciable influence on the economic condition of Russia. Owing to the closing of the Baltic and the Dardanelles it has, it is true, cut down Russian foreign trade to a low level for the time being, and has interfered with Russia's ability to make foreign remittances to pay for munitions purchased abroad, but on the other hand it has greatly stimulated industrial activity. An institution in which British investors have taken a substantial interest is the Russian Commercial and Industrial Bank, founded in 1890 by the authorisation of the Minister of Finance. Its original capital was 5,000,000 roubles, but the growth of its business soon called for more, and in 1895 the paid-up capital was increased to 6,250,000 roubles. In 1896 a third issue was made, and by 1900 the paid-up capital had increased to 10,000,000 roubles. In 1908 the capital was further increased to 15,000,000 roubles, in 1910 to 25,000,000 roubles, and in 1912 to 35,000,000 roubles. The issue of shares in recent years at a premium has helped to build up a reserve fund, which at the end of 1914 amounted to 9,765,000 roubles. The total capital and reserve at that date amounted to 44,766,000

roubles. This increase of reserve was called for in consequence of the rapid growth of deposits and other liabilities. In the first 10 years of its existence the deposits increased to 22,000,000 roubles, and then they grew to 235,000,000 roubles in 1913. In consequence of the disturbance to business caused by the outbreak of war they declined to 207,000,000 roubles at the end of 1914. This withdrawal of money was met without difficulty by loans from the Imperial Bank, and these loans have now been repaid. At the end of last year the correspondents of the Bank involved a liability of 125,000,000 roubles, and the total liabilities amounted to 439,000,000 roubles. The resources thus obtained are employed in the discount of bills and in loans, while correspondents figure in the assets for an amount equal to the liability incurred in respect of them. The rapid growth in the liabilities and assets of the institution is shown by the statement herewith.

The Bank has a very large number of branches in all parts of Russia, in the Central Provinces, in the South-Eastern region, in the Northern region, in the Northern Caucasus, as well as in Siberia and Turkestan, and, beyond the offices in Petrograd and Moscow, has branch offices in London and in Paris. Its net profit has risen with its growing business and capital, and in 1913 amounted to 3,838,000 roubles, equal to about 11 per cent. upon the stock. In 1914 its profit declined to 2,680,000 roubles, owing mainly to the absence of profit on stock and bonds and on exchange transactions. The course of the profits, the dividend paid, and the sums devoted to reserve in each year since 1904 are set out below:—

Profits of the Russian Commercial and Industrial Bank.

SKANDINAVISKA KREDITAKTIE-BOLAGET.

Head Office: Gothenburg.

Capital—
Authorised and Issued, 319,930 Shares of 142 Kronor, fully paid ... ... Kr. 45,430,060
Price of Shares, 375.* *Dividend*, 14·8%. *Yield*, 5·61%.

* Shares can only be held by persons of Swedish nationality and transactions can only be effected in Sweden.

In the spring of the year 1863 there was held a meeting in Gothenburg, numerously attended by national economists from Sweden, Norway, and Denmark, and before the narrow circle of members at this meeting the Danish financier, C. F. Tietgen, brought a plan concerning the foundation of a great credit establishment on a broad international basis; it was his intention that the capital should be 25,000,000 kronor, and the Bank should have its head office in Copenhagen, with branches in Stockholm, Gothenburg, Christiania, London, Paris, and Amsterdam. The plan met with sympathy, but there arose difficulties over the foreign participation. Consequently the Skandinaviska Kreditaktiebolaget was constituted with solely Swedish capital. According to the articles of association the aim of the Bank was to co-operate in the issue of loans for Governments, municipalities, and corporations; to participate in such loans, to buy and sell shares and bonds issued by legally constituted associations, to lend upon mortgage and to industrial enterprises; to advance money for the furtherance of enterprises of the latter or similar kinds; to receive money on deposit; and to buy and sell bills of exchange. The Bank commenced business on April 1, 1864, with a subscribed capital of 5,147,500 kronor, of which 1,029,500 kronor is paid up.

The Bank increased its capital:—

	Kr.
In 1865 to	7,495,115
„ 1873 „	7,500,156
„ 1891 „	10,000,208
„ 1902 „	12,500,260
„ 1904 „	17,000,240
„ 1906 „	22,000,000
„ 1909 „	45,430,000

In 1907 the Bank took over the Industrikreditaktiebolaget of Stockholm, a concern which had a capital of 7,000,000 kronor and reserve funds of 4,707,520 kronor; and in 1910 the Skanes Enskilda Bank, which had a capital paid up of 30,000,000 kronor and reserve funds of 23,519,500 kronor.

* 1 Krona = 1*s.* 1¼*d.* (18 to the £).

Through these two amalgamations its capital was increased to 45,430,000 kronor and its reserve fund to 47,500,000 kronor.

The Bank now has three head offices, in Gothenburg, Stockholm, and Malmö respectively and has branches in the chief towns of Sweden.

The Bank has made substantial progress throughout its history, thanks very largely to the long period of peace which Sweden has enjoyed. By 1880 its deposits and current accounts had grown to 32,000,000 kronor, or nearly £1,800,000, and by 1900 they had increased to 58,000,000 kronor. In 1909 they were 107,000,000 kronor, and at the end of last year had risen to 267,000,000 kronor, or £14,800,000, in consequence mainly of the amalgamations to which we have referred. The Bank does not need to keep any appreciable amount of cash idle, as it is able to draw whatever currency it requires from the State bank. The great European War now raging has brought advantage to the neutral countries as it enables them to sell their produce to the belligerents at high prices, and the business of this Bank has participated in the advantage. The strength of the Bank will be appreciated from the statement of assets and liabilities herewith.

The net profits of the institution in 1914 reached 7,213,000 kronor, equal to 16 per cent. upon the stock. The dividend distributed for the last five years has been 14.8 per cent. The course of the profits since 1904 has been as follows:—

As its name implies, the Société Générale was founded to foster commerce and industry in France, and throughout its history it has successfully carried out these objects, for not only has it built up a great banking business and placed a vast sum of banking money at the service of French trade, but it has been instrumental in raising from French investors hundreds of millions of francs of capital for the extension of French industry and commerce and for loans to foreign countries. Some idea can be obtained of the quantity of securities which the Bank has placed with its clients from the fact that in 1913 it cashed coupons for its customers to the extent of 1,733,000,000 francs, or nearly £70,000,000. To render the Bank still more useful to its clients the directors have recently constructed a magnificent set of vaults and strong-rooms in the most central section of Paris, capable of holding an unlimited quantity of securities, and these new facilities have already caused a large addition to its *clientèle*.

When it was founded the authorised capital of the institution was 120,000,000 francs and the paid-up capital was 30,000,000 francs. In the course of a few years the paid-up capital was increased to 60,000,000 francs, at which it remained until 1899, when it was increased to 80,000,000 francs by the issue of additional shares with 250 francs paid. In 1903 the paid-up capital was increased to 100,000,000 francs, in

* Exclusive of 10,000,000 francs appropriated from reserve to pay the dividend in consequence of the provisional character of the profit and loss account.

1905 to 125,000,000 francs, in 1906 to 150,000,000 francs, in 1909 to 200,000,000 francs, and in 1912 to 250,000,000 francs, at which it still remains. The existing authorised capital consists of 1,000,000 shares of 500 francs each, with 250 francs paid. The reserves of the Bank have also been steadily increased, partly by means of the premiums obtained upon the new issues of shares. At the present time the reserve fund amounts to 127,000,000 francs, so that the total paid-up capital and reserve is 377,000,000 francs, or £15,000,000. The deposits and current accounts have shown rapid expansion throughout the history of the Bank. At the end of 1864 they were already 29,000,000 francs, and by 1880 they totalled 334,000,000 francs. The progress during the eighties were comparatively slow, but since 1900 it has been enormous. In that year the total deposits and current accounts were 598,000,000 francs, whereas at the end of 1913 they reached 1,793,000,000 francs or, £75,000,000.

In consequence of the War and the need of many people to withdraw deposits to meet current expenditures the deposits of the Bank have shown heavy reduction, and at the end of 1914 were less than 1,100,000,000 francs, a reduction of over 700,000,000 francs, or nearly 40 per cent. This loss of funds was attended by a reduction in the bills held from 971,000,000 francs to 300,000,000 francs. The short loans on stock were also reduced by about one-half. In fact, the normal discount and stock exchange business largely disappeared in Paris, as in London. The great expansion in the business of the Bank up to the end of 1913, and the shrinkage that occurred in consequence of war conditions in the later months of 1914, will be evident from the statement herewith.

In recent years the Society was prosperous, and in 1913 it distributed a dividend of 8 per cent., free of all taxes. In 1914, however, it was not possible to arrive at the real profits, but a provisional statement showed that the profit was over 10,000,000 francs. Consequently the dividend was on a 4 per cent. basis, less tax. The profits earned in recent years are shown in the statement herewith.

SOCIÉTÉ GÉNÉRALE DE BELGIQUE.

Head Office: Brussels.

Capital—

Authorised and Issued, 31,000 Shares of 500 florins, fully paid (15,000,000 florins) ... ... Fr. 32,804,233

THIS important Belgian institution was founded in 1821. Up to the year 1850 it was the State bank, with a large note circulation, and had not only to conduct the banking business of the Government, but had to provide the currency of the country, and consequently it had a considerable note circulation. With the creation of the National Bank of Belgium, however, its State functions came to an end, and it de-

voted itself to the work of developing the industries of the country and to providing the Belgian people with an outlet for their investments. Its policy has always been an enlightened one, and in order to provide for the banking needs of almost the whole country it has founded a large number of provincial banks. These it controls by the ownership of a majority of the stock. These banks are, however, autonomous, each having its own local directors in touch with local needs. The president of each of these banks is, however, a director of the Société Générale and directs the policy. The deposits controlled by the Bank are, therefore, much larger than the amount which appears in its balance sheet. The capital of these local banks, of which control is thus owned, is about 100,000,000 francs. Not only has the Société Générale provided banking facilities for a large part of the country, it has supplied the Belgian people with an immense amount of securities into which to place their investments. It also takes care of the securities belonging to its customers, and at the end of last year the securities placed with it on deposit amounted to 1,737 million francs. The institution also possesses an important interest in the shares of a number of foreign banks working in various parts of the world. Since 1850, when it lost the right to issue notes, its funds have been obtained entirely from subscriptions of capital and from deposits, and whereas in that year the deposits amounted to only 12,000,000 francs, they have since grown to 483,000,000 francs, or £19,000,000. The greatest expansion in the business of the Bank has occurred since 1895. In that year the deposits and current accounts were only 80,000,000 francs. Ever since 1850 the paid-up capital has remained practically unchanged at somewhat under 33,000,000 francs, while its reserve has been increased from 31,000,000 francs to 74,000,000 francs. Its capital and reserve now amount to 107,000,000 francs. In the balance sheet the securities deposited for safe custody, amounting to 1,737,000,000 francs, are included, but these, of course, are held in its vaults on account of depositors and the Bank is only liable for their safe custody. In calculating the margin of capital and reserve to the total liabilities these should be excluded. The bills of the Bank outstanding amount to 58,000,000 francs. The outbreak of the great European war in the summer of 1914, and the occupation of almost the whole of Belgium by the German Army, have had serious consequences for Belgium, and great numbers of Belgians have sought safety abroad. As far as the Société Générale de Belgique is concerned, however, the War does not seem to have had any serious consequences other than to reduce its net profits substantially. Its business has, in fact, shown noteworthy expansion. Moreover, the Bank has undertaken the duty of supplying the country with bank-notes. The reason for this is explained in the following passage contained in the Society's report issued in February:—

"As we have had the honour to inform you at our meeting in November last, in consequence of the withdrawal by the German Government of the privilege of issue from the National Bank, the Société Générale de Belgique, wishing to save our country, already so severely tried, from a financial and economic catastrophe, has accepted the task of issuing bank-notes temporarily. For this object we have created a special department, completely distinct from our other services, which will be responsible for the issue of bank-notes, discount operations and advances. All these operations will be effected for the sole profit of the National Bank, which at the end of the War, and in conformity with our agreement with it, will take over our Issue Department.

"In assuming in this way a heavy task and a very great responsibility, without any profit for the Société Générale de Belgique, we have considered in the present grave circumstances only the higher interests of the country, and, sure of your approval, we have accepted this mission from our desire to serve the nation."

In 1914 the deposits grew from 325 million francs to 473 million francs, while the Bank's advances increased from 132 million francs to 268 million francs. Its investments were somewhat higher at 294 million francs. The liabilities of the Bank are shown in the statement herewith.

The profit earned is substantial. In 1913 it reached 10,239,000 francs, equal to a dividend of 31 per cent. Last year it was 6,000,000 francs, the gross income having declined and the expenses increased. In 1913 a dividend of 27.21 per cent. was distributed, but on account of last year it was decided to make no distribution. The profits have been as follows:—

Profits of the Société Générale de Belgique.

Year to Dec. 31	Gross Profit. Frs.	Expenses. Frs.	Net Profit. Frs.	—Dividend.— Amount. Frs.	Rate. %	Reserve Fund. Frs.

SVERIGES RIKSBANK.

Head Office: Stockholm, Sweden.

Capital—

All owned by the State ... ... Kr. 50,000,000

BANKING began unusually early in Sweden—earlier by several years, in fact, than the establishment of the Bank of England. In 1656 a charter was granted to John Palmstruch and his associates authorising a Bank to deal in exchange and grant loans for the advantage of commercial enterprise. The offices were to be in Stockholm and other towns in the kingdom, the banks of Amsterdam and Hamburg serving as prototypes in framing the regulations for the Swedish institution. Advances were made by the Bank on the security of bullion or other valuables, merchandise, and also real estate. Interest was charged at the rate of 6 per cent. And the charter provided that the King, like all other borrowers, should give security for advances made, and should be under obligation to make repayment within a year and six weeks. In 1668 the Bank was declared to be the Bank of the estates of the realm, and the authority and responsibility of Parliament for it became absolute. The original name, Rikets Ständers Bank, was subsequently shortened into Riksbank. The Bank was guaranteed the privilege of being custodian of the revenue received from Customs and other State revenues, the funds of various public institutions, the revenue of the City of Stockholm, bequests and other funds; while the King undertook not to exact from the Bank overdrafts on his deposit account. The regulations for the conduct of business and the classes of business undertaken remained unchanged. The Bank got into difficulties in 1700.

As a result of the excessive issues of credit notes which were payable in copper, silver, which was the standard of value, reached a premium in 1760 of 100 per cent. In 1776 the difficulties became so great that it was decreed that the notes should be redeemed at half the amount in silver represented by the rating of 1717 on their face value in copper. The transfer notes representing copper currency were succeeded by notes representing gold and silver, and the currency was once more regularised. The Riksbank was authorised in 1800 to establish a national discount business with a capital of 600,000 dalers, of which, during the 15 years for which the charter was granted, one-third of the capital might be subscribed by private persons. These persons were to subscribe in metallic silver, and, further, to lend the Bank an equal sum in silver. Of the six directors, two were to be shareholders elected by the body of shareholders and four appointed by the Riksbank. In addition, arrangements were made in 1800 for the establishment of discounting businesses in other towns, where, however, private capital alone was employed.

In 1817 the difficulties of the country, together with mismanagement, brought about the failure of several of these private concerns. The total loss to the Riksbank amounted to 1,343,000 dalers. Parliament, in consequence, resolved that the Riksbank's discount agency should alone be permitted in future to conduct the business of discounting throughout the kingdom. But the management of the discount business by the Riksbank was not more fortunate. The depreciation of the Bank's notes became such that in March 1830 a new redemption of the notes was decreed at the rate of 37½ per cent. of the face value of the notes. In other words, 2⅔ dalers in bank-notes were declared to be the equivalent of one daler in silver. This relation was maintained from 1834, when the change became possible, till the establishment of the gold standard. From 1834 the redeemability of the notes of the Bank was maintained in silver till 1873. Since that year it has been in gold. In 1834, when specie payments were resumed, it was found possible to provide a metallic capital for the Riksbank. That capital has been increased several times since. It was fixed by the law of 1897 at 50 million kronor, or nearly 2¾ millions sterling. Without going further into details of the many changes made in the constitution of the Bank, it may be stated that an Act of Parliament, instead of the Royal Decree formerly issued, settled the matter in 1897. The notes of the Riksbank retain the legal-tender character, but they must be redeemed on demand in gold coin at the Bank's head office. The metallic reserve is defined as consisting of all the domestic and foreign gold coin and gold bullion, the property of the Bank, within the country, and must not at any time be less than 25 million kronor.

The note issue is partly fiduciary and partly covered by cash. As cash may be reckoned the metallic reserve, as just defined; gold coin or bullion deposited abroad, or in transit to Sweden, and covered by insurance; and, lastly, the current account credit balances of the Bank with banks and mercantile houses abroad. The fiduciary issue must be covered by easily realisable foreign Government bonds; bonds of the Swedish Government, of the General Mortgage Bank, and of other Swedish enterprises which are quoted on foreign stock exchanges; and bills of exchange, whether domestic or foreign. In 1901 the cash covering the note issue, so far as it consists of foreign credits, was defined as the amount of such credits after deducting corresponding debits—in other words, of the net instead of the gross credit balances. Further, the words "mercantile houses" were replaced by "banking houses." Moreover, the minimum metallic reserve was raised to 40 million kronor. And, lastly, the fiduciary issue was allowed to be increased above 100 million kronor by the amount by which the metallic reserve should exceed the minimum of 40 million kronor. In addition to these various arrangements respecting note issues, the capital of the Bank was raised by setting aside a sum of 12½ million kronor as a special fund for loans repayable by instalments at fixed intervals. As these loans can be called in to meet an emergency they are hardly suited for a note-issuing bank. The difficulty was got over in 1903 by separating the fund from which they are made from the general fund of the Bank. As the right of issuing notes was taken away from the other banks, the number of branches of those banks was required to be increased, so that there might be at least one in each of the 24 districts into which Sweden is divided for Government purposes. On the other hand, the other banks, to compensate them for the withdrawal of the right of issue, were assured financial support from the Riksbank on condition that they maintained all the offices in operation at the opening of the year 1896. Furthermore, there were some restrictions imposed upon the kinds of business the Bank might engage in. Particularly, it was forbidden to pay interest on deposits, to own land except such as was needed for the transaction of its regular business; and though it was permitted to buy

real estate, it was required to sell it again as soon as possible. Previously the Bank had been under the sole control of Parliament. This was changed by the Act of 1897. The Crown appoints a Chairman and Parliament appoints six representatives. The seven constitute the governing body of the Bank.

The capital of the Bank is now 50,000,000 kronor; its reserve is 12,500,000 kronor, and its total capital and reserve are 62,500,000 kronor. Its note circulation is 312,000,000 kronor. Inasmuch as the Bank holds against its note circulation only 113,000,000 kronor of cash the note circulation provides 199,000,000 kronor of money for banking and currency purposes. The greater part of the Bank's resources are invested in bills. The great European War now raging has brought advantage to Sweden, which is experiencing a great demand for her produce at high prices. The demand for currency is reflected by an increase in the Bank's note circulation from 242 million kronor before the War to 312 million kronor at the present time. Apparently cash payments are being made more extensively as the loans and discounts of the banks have declined. On the other hand, the Bank has substantially increased its cash, foreign balances, and its investments. The following contrast discloses the effects of the War on its position:—

The expansion in the business of the Bank will be appreciated from the statement of assets and liabilities herewith.

Almost the whole of the cash in hand now consists of gold, whereas in the old days its cash balances were almost entirely of silver. The amounts of gold and

silver now held in comparison with the past are shown by the following statement:—

Gold and Silver Holdings of the Sveriges Riksbank.

Dec. 31	Gold. Kr.	Gold. % of Total. %	Silver. Kr.	Silver. % of Total. %	Total. Kr.

The profits of the institution in proportion to its capital are substantial. Last year the net profit was 8,761,000 kronor, equal to 17.5 per cent. on its capital stock, and this was also the rate of dividend. Upon its capital and reserve the profit was equal to 14 per cent. The substantial growth in the profits in recent years will be seen from the statement appended:—

Profits of the Sveriges Riksbank.

SWISS BANKVEREIN.

Head Office: Basle.
London Offices: 43 Lothbury, E.C.; 11c Regent Street, S.W.

Capital—
Authorised and Issued, 164,000 Shares of 500 Frs. each, fully paid... ... Frs. 82,000,000
Price per Share, 590 frs. *Dividend*, 6%. *Yield*, 5.08%.

One of the noteworthy developments of modern times has been the growth of the income and of the wealth of the Swiss people. Not many years ago the income of the Swiss was sufficient to give them no more than enough to take care of their own needs and to develop their own industries. But the immense growth in the income and wealth of so many countries have enabled an ever-increasing number of tourists to visit the beautiful lakes, valleys, and mountains of their country both in winter and in summer, at the same time that the introduction of electricity has given them an unlimited quantity of cheap power for their industries. The influx of money that has taken place in consequence of these developments was rapidly converting Switzerland from a relatively poor to a very rich country, and the amount of money which the Swiss had for investment in the course of the year reached large sums. This condition of affairs brought about the opening in London of a branch of the Swiss Bankverein, whose managers never fail to obtain an important share in attractive new issues for the Swiss people. Indeed, the Swiss Bankverein has become an important issuing bank on its own account, and each year places with Swiss investors large amounts of securities both home and foreign, for which it is entirely responsible or for which it shares responsibility with other firms. The Swiss Bankverein really dates from 1872, when the Basler Bankverein was formed.

This important institution in 1895 amalgamated with the Zürcher Bankverein of Zurich, and in 1896-97 with the Schweiz Unionbank of St. Gall and the Basler Depositenbank. It then changed its name into the Schweizerischer Bankverein, known in English as the Swiss Bankverein. In 1906 it absorbed the Banque de Bâle, and Messrs. d'Espine, Fatio and Co., of Geneva; in 1908 the Bank für Appenzell; and in 1912 Messrs. S. A. von Speyr and Co., of Bale, and the Banque d'Escompte et de Dépôts of Lausanne. In 1872 the paid-up capital of the institution was 6,000,000 francs. The earlier amalgamation brought the paid-up capital to 40,000,000 francs, and the amount has since been raised to 82,000,000 francs. The reserve fund has been steadily built up until it is now 27,750,000 francs. The total capital and reserve is thus 109,750,000 francs. The deposits, which in 1872 were only 4,000,000 francs and which after the first consolidations amounted to about 80,000,000 francs in 1900, have since increased to as much as 340,000,000 francs. The Bank transacts a relatively large bill business and its bills payable and acceptances at the end of 1913 amounted to nearly 150,000,000 francs, or £6,000,000. In consequence of the War they were reduced last year to 61,000,000 francs. Over 50 per cent., or 261,000,000 francs, of its resources are employed on current account. The following extract from the Bank's report for 1914 describes clearly the effect of the War on Switzerland in general, and upon the Bank itself:—

"Business during the first half-year (1914) was only moderately active. The reaction which had become evident in trade and industry made further progress, and was also reflected in banking business. Short-term money was fairly plentiful, but the comparatively low interest rates failed to stimulate economic activity; on the contrary, they were only symptomatic of the general hesitation evinced by the investing public. However, crises in international politics had occurred so frequently, without leading to a rupture between the Great Powers, that the business community had gradually become inured to this state of uncertainty. Recent years had witnessed so marked an improvement in international relations, especially in the domain of economics and finance, that it seemed almost incredible that any Government would risk incurring the awful responsibility of a general conflagration which would endanger and partly annihilate the material progress achieved during 40 years of peace.

"Switzerland, like other countries, stood appalled when suddenly confronted with a war of this unprecedented magnitude.

"Situated in the heart of Europe, with industries having their principal markets beyond our boundaries, dependent to a considerable extent on a large influx of tourists in summer and winter, it was inevitable that our whole economic structure would be severely affected by the conflict which raged in Europe. Hence it is not surprising that the declarations of war, which at the beginning of August followed one another with dramatic rapidity, created a profound impression here.

"However, it was not long before calmer feelings prevailed. The able measures adopted by the Federal Council for the protection of our military and economic position, the perfect order in which the mobilisation of our army was carried through, the general recognition of our neutrality, and also the salutary action of the Swiss National Bank, soon led to the establishment of a more hopeful feeling. The public gradually adapted itself to the modified conditions brought about by the War, and all efforts were directed towards limiting the ravages caused by the European crisis. The great success obtained by the two Federal Mobilisation Loans furnished a striking proof of the people's confidence in the future of our country.

"No branch of our national activity is more intimately connected with foreign countries than our banking business. Just as with our trade and industries we are forced to look for our markets to fields outside our frontiers, so, as regards finance, it is

impossible to restrict business to the narrow limits of our territory.

"The first problem to be solved at the outbreak of hostilities was the repatriation of our credit balances abroad. The moratoria proclaimed by most of the European Governments, and the breakdown of the foreign exchanges, rendered this operation exceedingly difficult, and for a time retarded its execution.

"In order to strengthen our resources in Switzerland, and notwithstanding the serious loss in exchange, we called in, as soon as it became practicable, the bulk of our credit balances in adjacent countries, and by December 31 these were reduced to the amounts requisite for the conduct of our current banking transactions.

"Current business, especially in the third quarter, suffered a considerable reduction, which is reflected in the decrease of our turnover from 47,551,634,300 francs to 34,310,699,922 francs last year.

"In view of the general situation, and in order to be prepared for any possible contingencies, we deemed it advisable, notwithstanding the loss of interest thereby incurred, to maintain larger cash balances than usual. Our cash position on December 31, 1914, showed an increase of about thirteen million francs over that at the end of 1913. Profit on discounts was somewhat higher than last year, due to the advance in rates since the beginning of August. This also applies to profit from interest. On the other hand, commission accounts show a falling-off by nearly 400,000 francs, attributable to the decrease in the turnover and the stagnation in investment business since the closing of the stock exchanges in August.

"Whilst, in the absence of official quotations for December 31, 1914, we have valued our securities and holdings on syndicate account on the basis of the prices ruling prior to the outbreak of the War, we have, thereagainst, made such provision by way of writing off and reserves as the situation in general, and the intrinsic merits of the securities in particular, appeared to demand. It will be observed that the decrease in our total net profit, as compared with previous years, is almost entirely due to this substantial provision for depreciation, made from the year's results.

"Up to the present the positions of our debtors, which have our close and unremitting attention, have

How to create
CAPITAL

WHEN Investments have depreciated in value, fresh capital can be at once created by means of Life Assurance. This and other points are clearly explained in the pamphlet entitled "WHERE AND HOW TO ASSURE," issued by the

Scottish Amicable

not given cause for misgivings. The total amount of our engagements under this heading, compared with previous years, has considerably decreased. In connection therewith our acceptance account shows a reduction of about 80,000,000 francs, acceptances given against reimbursement credits having suffered a considerable reduction as the result of the war."

The great expansion in the deposits and business of the Bank will be evident from the statement of assets and liabilities herewith.

The net profit last year was 8,127,000 francs, but of this sum 3,302,000 francs was reserved against loss by depreciation, and the dividend was reduced from 8 to 6 per cent. The profits since 1903 are set out below:—

VOLGA-KAMA COMMERCIAL BANK.

Head Office: Petrograd.

Capital—

Authorised and Issued, 72,000 Shares of 250 Roubles, fully paid ... ... Rbls. 18,000,000

The Volga-Kama Bank was established in 1870 for the purpose of pursuing general banking business as conducted in Continental countries, and has met with great success. Starting with deposits of about 31,000,000 roubles, its current accounts and deposits now reach a total of 372,000,000 roubles. This amount compares with 127,000,000 roubles in 1903. The capital of the institution has been increased as its business has grown. Commencing with a paid-up capital of 6,000,000 roubles, it repeatedly increased until in 1911 it amounted to 18,000,000 roubles. At the same time its reserve funds have been built up in part by premiums received on the new issues of capital and partly by profits until they reach a total of 21,036,000 roubles. Its total capital and reserve is thus 39,000,000 roubles. This amount bears a proportion of 7.2 per cent. to its total liabilities. It has made advances to customers amounting to about 145,000,000 roubles, and it holds bills for 192,000,000 roubles. The War greatly increased the demand for banking accommodation, and at the same time added largely to the Bank's deposits. This will be seen from the statement of liabilities and assets herewith.

The net profits of the undertaking are very substantial, and, in spite of the difficulties created by war, last year amounted to 3,435,000 roubles, a sum equal to 19 per cent. upon the capital and to nearly 9 per cent. upon the capital and reserve. In 1914 the dividend paid was still as high as 19 per cent. Profits and dividends in recent years have been as follows:—

Profits of the Volga-Kama Commercial Bank.

An interesting feature with regard to this Bank is the substantial participation it gives in its profits to its employees. Before calculating the profit available for division it sets aside 5 per cent. to reserve until the sum reaches one-third of the share capital, and 2 per cent. until it reaches one-half of the share capital. Thereafter 5 per cent. to the managers, 2 per cent. to the board, 1 per cent. to the Stock Exchange

Committee of Rybinsk, and 40,000 roubles to the compensation and provident fund. The remainder, as long as it does not exceed 8 per cent. of the share capital, is paid in full to the shareholders. Of the surplus above 8 per cent. 15 per cent. goes to the employees, and the remainder is at the disposal of the shareholders.

YOKOHAMA SPECIE BANK, LIMITED.

Head Office: Yokohama.

London Office: 7 Bishopsgate, E.C.

Capital—

Price of Share, 214% *Div,* 12%. *Yield,* £5 12*s.* 3*d.*%

THIS important banking institution was formed and started business in February 1880 with the object of affording financial facilities in respect of the foreign trade of Japan. It also conducts a general banking business and the various matters relating to the financial affairs of the Imperial Government, both in Japan and other countries. The Bank was originally conducted under the provisions of the National Banking Law, but a special Imperial Ordinance entitled the Yokohama Specie Bank Regulations was promulgated in July 1887, which provides for a strict supervision by the Government over the affairs of the Bank, and business is now conducted under the provisions of this Ordinance. The Bank was formed with a capital of Yen 3,000,000, but with the very great expansion that has occurred in the business it has been necessary to increase the capital on various occasions, the last being in 1911, when the paid-up amount rose from Yen 24,000,000 to Yen 30,000,000. The business is to a large extent of an international character, as may be gathered from the fact that, in addition to the head office at Yokohama and a very important branch in London, the Bank has offices in Lyons, while it also does business in New York, San Francisco, and Los Angeles in the United States. There are likewise offices at Bombay and Calcutta. In China the Bank conducts business at Shanghai, Hankow, Tientsin, Peking, and Hong Kong. Altogether the branches and agencies reach a total of 27. The growth has been of a very rapid character. In June 1895 the deposits were Yen 11,800,000; by 1900 they had increased practically fivefold, amounting to Yen 54,700,000; by 1905 they rose to Yen 99,700,000; and by 1907 to Yen 150,600,000. A falling-off then occurred, until by June 30, 1910, the deposits dropped to Yen 114,400,000.

The high-water mark was touched in June 1913, when the deposits reached a total of Yen 205,708,482. At December 31, 1914, they amounted to Yen 186,027,935. Herewith we set out the liabilities and assets for various years from 1881.

For the twelve months to June 30, 1914, the gross profit amounted to Yen 43,981,867, as compared with Yen 35,720,385 for the previous year. A practically equal growth occurred in the expenses, so that the increase in net profit was only about Yen 54,000, the amount being Yen 4,385,638, as compared with Yen 4,331,010. Since the second half of 1902 the dividend has been maintained at the steady rate of 12 per cent. per annum, and large sums have been set aside to reserve, &c., the reserve fund rising from Yen 9,639,169 in 1902 to Yen 20,322,446 in June 1914. Herewith we set out the profit record for each year since 1904:—

TWENTIETH ANNUAL REPORT—FOR THE FISCAL YEAR TO JUNE 30, 1915.

SEPTEMBER 14, 1915.

To the Stockholders:

Your [illegible] submit the following report for the fiscal year July 1, 1914, to June 30, 1915, inclusive.

The lines [illegible] the following companies, the operations of which are embraced in the following statements, are as follows:—

	June 30, 1915.	June 30, 1914
Atchison, Topeka & Santa Fe Railway ...	[illegible] miles.	8,339·72 miles.
Rio Grande, El Paso & Santa Fe Railroad ...	20·22 „	20·22 „
Gulf, Colorado & Santa Fe Railway ...	1,937·71 „	1,595·89 „
Pecos & Northern Texas Railway	— „	569·79 „
Panhandle and Santa Fe Railway	665·02 „	179·16 „
Texas and Gulf Railway	„	125·49 „
Gulf & Interstate Railway of Texas	— „	71·33 „
Concho, San Saba & Llano Valley Railroad ...	„	59·63 „
	11,136·45 „	10,961·23 „

Increase during the year, 175.20 miles.

The average mileage operated during the fiscal year ending June 30, 1915, was 11,114.52 miles, being an increase of 206.00 miles as compared with the average mileage operated during the preceding fiscal year.

Under leases effective July 1, 1914, the lines of the Pecos and Northern Texas Railway north of Sweetwater, Texas, were operated by the Panhandle and Santa Fe Railway, and the lines of the Texas and Gulf Railway, Gulf and Interstate Railway of Texas, Concho, San Saba and Llano Valley Railroad and Pecos and Northern Texas Railway south of Sweetwater by the Gulf, Colorado and Santa Fe Railway.

In addition to lines covered by this report, there were completed on June 30, 1915, 25.70 miles of additional line, all of which will be ready for operation in the near future.

The Company also controls, through ownership of stocks and bonds, other lines aggregating 228.92 miles, and is interested jointly with other companies in 606.08 miles.

For detailed statement of present mileage and of changes in mileage see last annual report.

INCOME STATEMENT.

The following is a summary of the transactions of the system for the years ending June 30, 1914 and 1915:—

	1914.	1915.
Operating revenues	$111,109,769 86	$117,665,587 46
Operating expenses	73,469,333 68	76,091,553 69
Net operating revenue	$37,640,436 18	$41,574,033 77
Taxes	5,526,585 30	6,497,316 77
Uncollectible railway revenues	—	25,316 43
Operating income	$32,114,850 88	$36,051,400 57
Other income	2,174,353 12	2,997,150 47
Gross corporate income	$34,289,204 00	$39,048,551 04
Rentals and other charges (see note) ...	1,218,827 03	2,131,942 03
	$33,070,376 92	$36,916,609 01
Interest on Bonds, including accrued interest on Adjustment bonds	12,885,412 23	12,785,747 10
Net corporate income (representing amount available for dividends and surplus and for necessary but unproductive or only partially productive expenditures)	$20,183,964 69	$24,130,861 91
From the net corporate income for the year the following sums have been deducted:—		
Dividends on 5% Preferred Stock ...	$5,706,966 50	
Dividends on 6% Common Stock ...	11,841,330 00	
Appropriation for Fuel Reserve Fund ...	64,962 75	
California-Arizona Lines Bonds Sinking Fund	12,945 67	
Appropriated for Additions and Betterments	6,513,396 96	
		$24,130,861 91
Surplus to credit of Profit and Loss June 30, 1914		$20,569,800 81
Additions to Profit and Loss Account (net) ...		11,421 10
Surplus to credit of Profit and Loss June 30, 1915		$20,581,221 91

NOTE. The increase of $913,114·98 in "Rentals and Other Charges" is chiefly in the item "Hire of Equipment," due to the increased number of cars the necessity for leasing [illegible] and the increased mileage of foreign cars handling it.

Income from sources other than earnings from operation consisted of interest on cash in banks and sums collected as interest and dividends upon bonds and stocks of companies, the operations of which are not included in the system accounts.

CAPITAL EXPENDITURES AND REDUCTION OF BOOK VALUES.

The total charges to capital account, as shown by the general balance sheet at June 30, 1915, aggregated $683,855,314.09 as compared with $671,814,299.94 at June 30, 1914, an increase during the year of $12,041,014.15, which analyses as follows:

Construction and acquisition of new mileage, including the acquisition of bonds and stocks of other railway and terminal companies:—Boise City & Cimarron Valley Ry., $11,430·34; Eastern Ry. of New Mexico, $5,242·[illegible]; Grand Canyon R. ... $[illegible]; Mc Farland-Hughes Ry., $[illegible]; Old Pueblo & Santa Fe Ry., $[illegible]; [illegible] R.R., $[illegible]; Quanah, Acme & Pacific Ry., $[illegible]; Texas Pacific Terminal Ry., $4,000·00; Texas Passenger Depot Co. of Galveston, $292,565.87; Verde Valley Ry., $24,000.00. Total, $4,248,405.53.

Additions and Betterments to Road. Land. Track Elevation, $[illegible]; Additional Equipment, $2,464,431·34; Betterments to Equipment, $21,231·15. Total, $7,40[illegible]·51.

Fuel Lands and other Property. Real Estate held for future use, $14,[illegible]·72; Tie and timber lands, $[illegible]; Mine Plants, $12,[illegible]·67. Total, $26,[illegible]·39. Other Investments, [illegible]. Total Charges, $[illegible]

Reduction of Book Values. [illegible] Atchison & Santa Fe Ry., $[illegible]; San [illegible] Terminal Property, $[illegible]; Western [illegible] Ry., $[illegible]; [illegible] Plant, Berth, $12,[illegible]; [illegible]. Total, $[illegible]. Santa Fe Building, Tie & Timber, $7[illegible]; Coal Lands, $[illegible]. Total, $318,926.83.

Net increase in Capital Account during the year, $12,041,014.15.

For details of additions and betterments by accounts see statement on page 34 of annual report.

The item of $2,464,431.34 for "additional equipment" analyses as follows:—

727 Freight-train cars, $[illegible]; 15 Passenger-train cars, $2,45[illegible]; 1,927 Miscellaneous Work cars, $[illegible]; 5 Miscellaneous equipment, $2,793·97—$3,615,976.72. *Less*—Value of equipment retired during the year as follows: 47 Locomotives, $[illegible]; 2,789 Freight-train cars, $[illegible]; 10 Passenger-train cars, $30,259.48; 107 Miscellaneous Work cars, $37,381.97; Adjustment of charges [illegible] prior years, $[illegible]—$1,151,545.38. Total, $2,464,431.34.

The 1,927 miscellaneous work cars included in equipment added, and the 2,789 freight-train cars reported as retired include 1,925 cars, which, being permanently assigned to work service, were relettered in work service equipment series during the year and transferred from freight equipment to work service equipment at their depreciated value at time of relettering.

In addition to the equipment reported retired as above, thirty-three freight-train cars leased from the Oklahoma Central Railroad Company were also retired during the year, and liability therefore included in Other Unadjusted Credits [illegible].

MAINTENANCE OF EQUIPMENT.

The following statement shows the sums charged to operating [illegible] for [illegible] each year since July 1, 1896:—

Year to June 30	Aver. Miles.	Expenditure—Total.	Expenditure—Per Mile.
		$	$
1897...	6,443·81	3,443,884 82	534 45
1898...	6,936·02	4,659,277 99	671 75
1899...	7,032·62	4,810,795 64	684 07
1900...	7,341·34	5,267,832 40	717 56
1901...	7,807·31	6,[illegible]426 57	801 49
1902...	7,855·38	7,864,951 25	1,001 22
1903...	7,965·13	8,510,543 09	1,068 48
1904...	8,179·59	10,006,135 41	1,223 31
1905...	8,305·40	10,914,864 47	1,314 19
1906...	8,433·99	10,720,040 43	1,271 05
1907...	9,273·15	11,779,846 64	1,270 32
1908...	9,415·01	14,246,621 44	1,513 18
1909...	9,794·86	13,903,897 37	1,419 51
1910...	9,916·33	15,560,047 44	1,569 13
1911...	10,350·13	16,686,145 45	1,612 17
1912...	10,627·92	16,521,231 41	1,554 51
1913...	10,750·31	19,415,224 63	1,806 02
1914...	10,908·52	19,[illegible]00,724 51	1,750 99
1915...	11,114·2	19,764,535 40	1,778 26

For the year ending June 30, 1915, maintenance charges, including renewals and depreciation, averaged as follows:—

Per locomotive, $4,600 26; per locomotive mile, $0 1674; per freight car $ [illegible]; per freight car mile, $[illegible]; per passenger car, including mail and express, $[illegible]; per passenger car mile, $[illegible].

[illegible] proportion of unlocated expenditures for maintenance of equipment charged to superintendence, shop machinery, injuries to persons, insurance, stationery and printing, other expenses, and maintaining joint equipment at terminals. Refrigerator cars are not taken into consideration in arriving at freight-car averages, such cars being operated by the Santa Fe Refrigerator Despatch Company, which bears the expense of their maintenance.

[illegible] tractive power will be found on page 42 of annual report.

MAINTENANCE OF WAY AND STRUCTURES.

The following statement shows the sums charged to operating expenses for maintenance of way and structures during each year since July 1, 1896:—

Year to June 30	Aver. Miles.	Expenditure—Total.	Expenditure—Per Mile.
		$	$
1897...	6,443·81	[illegible]	[illegible]

1915...	[illegible]	[illegible]	[illegible]

PROPERTY INVESTMENT AND RATE OF RETURN.

The development of the Company's business and of its efficiency has been due principally to the very large expenditures (over $308,000,000) which have been made in the extension and improvement of the property since January 1, 1896. In order to make such expenditures your Company has raised since 1896 over $218,000,000 of "new money" by the sale of bonds which are now outstanding or which (in the case of many of the Convertible Bonds sold) are represented by Common stock now outstanding.

The following statement shows, for each year, the amount of investment, the amount of net income applicable to bond interest, dividends, improvement of property and strengthening of credit, and the rate of return which such net income represents on the amount of the investment.

Year to June 30	Property Investment.*	Income Applicable to Bond Interest, Divs., Improvement of Property & strengthening of Credit.† Total.	% of Prop. Investment.
	$	$	
1896 (6 months)	372,104,262 77	2,432,870 06	·65
1897	387,957,477 68	6,070,364 45	1·57
1898	392,169,842 02	8,871,947 26	2·26
1899	399,527,444 30	11,409,315 36	2·86
1900	407,187,811 22	17,034,950 91	4·19

* The amounts above shown as "Property Investment" do not include anything for necessary working capital, such as materials and supplies and cash. Ordinarily such necessary working capital considerably exceeds $35,000,000. In the years 1901 to 1908 the "Property Investment" was reduced by "writing off" sums aggregating $21,066,685.78, which sums are excluded from the "Property Investment" as above stated. The figures for the years 1910 to 1914, inclusive, are not the same as shown in the corresponding table of annual report for the previous year, but are revised to conform to the Interstate Commerce Commission's classification of "General Balance Sheet Accounts," effective July 1, 1914.

† The "Income" shown above is determined after allowing for adjustments made through profit and loss.

The striking fact emphasised by the foregoing statement is that the earnings on the entire investment are now not much more than 5% per annum, and it must be borne in mind that of these earnings it is necessary to appropriate a considerable amount each year for additions and betterments to preserve the Company's credit.

The ability of your Company, under the conditions which this statement exhibits, to pay 6% on the Common stock, is due to the fact that it pays an average of only slightly more than 4% on its bonded debt, much of the bonded debt having been created when money could be obtained at or near 4%.

COMPARISON OF OPERATING RESULTS.

The following is a statement of revenues and expenses of the system for the fiscal year ending June 30, 1915, in comparison with the previous year :—

	Year to June 30— 1915.	1914.	Inc. or Dec.
OPERATING REVENUES:	$	$	$
Freight	80,504 393 33	73,638,388 01	+ 6,866,005 32
Passenger	27,823,033 87	28 497,232 68	— 674,198 81
Mail, Express, and Misc.	9,338,130 26	8,974,149 17	+ 363,981 09
Total Oper. Revenues	117,665,587 46	111,109,769 86	+ 6,555,817 60
OPERATING EXPENSES:			
Maintenance of Way and Structures	16,514,467 89	15,425,729 81	+ 1,088,738 08
Maint. of Equipment ...	19,764,535 40	19,213,342 69	+ 551,192 71
Traffic	2,649,174 86	2,521 773 79	+ 127 401 07
Transportation—Rail Line	34,827,705 34	33,899,108 43	+ 928,596 91
General ..	2,476,556 20	2,409,378 96	+ 67,216 24
Transportation for Investment—Cr.	140,925 00	—	— 140,925 00
Total Oper. Expenses	76,091,553 69	73,469,333 63	+ 2,622 220 01
Net Operating Revenue	41,574,033 77	37,640,435 18	+ 3,933,597 59
Ratio of Oper Expenses to Oper. Revenues	64·67	66·12	—1·45

NOTE.—The Operating Expenses by general accounts used for comparative purposes are not the same as shown in the last annual report, but are revised in accordance with Classification of Operating Expenses as prescribed by the Interstate Commerce Commission, effective July 1, 1914.

The following averages are deduced from tables set forth on pages 37 and 40 of annual report.

The average tons of freight (revenue and company) per loaded car mile increased from 18.75 to 19.71, or 5.12 per cent. The average tons of freight (revenue and company) carried per freight-train mile (freight and mixed) increased from 420.45 to 442.04, or 5.13 per cent. The average freight revenue per freight-train mile increased from $3.47 to $3.55, or 2.31 per cent. The average passenger revenue per passenger-train mile decreased from $1.17 to $1.09, or 6.84 per cent. The average passenger train revenue per passenger-train mile decreased from $1.45 to $1.37, or 5.52 per cent.

The tons of freight carried one mile (revenue and company) increased 1,099,152,546, or 12.33 per cent., while miles run by freight cars (loaded and empty) in freight and mixed trains increased 66,620,201, or 9.82 per cent., and the mileage of such trains increased 1,450,807, or 6.84 per cent.

The number of passengers carried one mile increased 31,618,391, or 2.41 per cent., while miles run by passenger cars in passenger and mixed trains increased 10,362,341, or 7.41 per cent., and the mileage of such trains increased 1,213,955, or 4.98 per cent.

While freight operating revenues increased 9.32 per cent., the freight service rendered, as measured by tons transported one mile, increased 12.33 per cent.; and while earnings from passengers carried decreased 2.37 per cent., the passenger service rendered, as measured by passengers carried one mile, increased 2.41 per cent.

The following is a consolidated statement of the business of the System for each fiscal year during the period since January 1, 1895 :—

Year to June 30	Aver. Miles Oper.	Gross Revenues.*	Expenses †	Interest on Bonds.	Net Corporate Income.
		$	$	$	$
1897‡ ...	6,443	44,532 623	36,038,455	8,440.387	53,785

CAPITAL STOCK AND FUNDED DEBT.

The outstanding Capital Stock (deducting stock in treasury) on June 30, 1914, consisted of :

Common	$195,811,500	
Preferred	114,173,730	
		$309,985,230 00
Issued during the year—		
Common stock issued in exchange for Convertible bonds retired		4,678,000 00
Capital stock outstanding June 30, 1915—		
Common	$200,489,500	
Preferred	114,173,730	
		$314 663,230 00

The outstanding Funded Debt of the System (deducting bonds in the treasury) amounted on June 30, 1914, to $313,193 648 50

The following changes in the Funded Debt occurred during the year :—

Obligations Issued—Convertible 4 % Bonds $977,000; Rocky Mountain Division 4 % Bonds, $3,000,000; California-Arizona Lines First and Refunding Mortgage 4½ % Bonds, $3,0 86 90 ...	$3,987,866 90
Obligations Purchased or Retired—Serial Debenture 4 % Bonds, $5,000; Convertible 4 % Bonds, $4,678,000; California-Arizona Lines First and Refunding Mortgage 4½ % Bonds, $9,733; Chicago and St. Louis Railway Co. First Mortgage 6 % Bonds, 1,498,000; Funded Debt Matured Unpaid included in General Balance Sheet under "Current Liabilities," $15,500	6,206,233 00
Decrease of Funded Debt	2,218 366 10
Total System Funded Debt outstanding June 30, 1915 ...	...$310,975,282 40

Interest charges for year ending June 30, 1916, will be about $1,056,570. In making this approximation, exchanges of Convertible Bonds for Common Stock made since June 30, 1915, aggregating $2,007,000, are considered.

TREASURY.

Neither this Company nor any of its auxiliaries has any notes or bills outstanding.

The Company held in its treasury on June 30, 1915, $21,186,791.95 cash, and had available $5,278,000 General Mortgage Bonds, including bonds not yet certified by the Trustee. The Company also has in the treasury unpledged a large amount of stocks and bonds of other companies, of which part are carried in the balance sheet as investments and part are included under railroads, franchises, and other property.

During the year $977,000 of Convertible 4% Bonds, which formed part of the Company's treasury assets, were sold for cash, realising $997,702.50.

MINKLER SOUTHERN RAILWAY.

This Line, from Minkler to Exeter, California, aggregating, with two short branches, 43.71 miles, was completed and opened for traffic on October 1, 1914. An extension, from Exeter to Lindsay, a distance of 6.95 miles, has since been constructed and will be placed in operation October 1, 1915.

OKLAHOMA CENTRAL RAILROAD.

This Line, extending from Chickasha, Oklahoma, to Lehigh, Oklahoma, a distance of 133 miles, crossing your main line at Pursell and Byars, was leased by your Company effective August 1, 1914, for a term of five years, and has since that date been operated as a part of its system. The line serves a fairly good agricultural country, but the main purpose in leasing it was to secure coal from the Lehigh fields for use on the system and the prospect of supplying the demand for coal at points in northern Texas.

OIL FIELDS AND SANTA FE RAILWAY.

This Company was formed to acquire certain lines extending from Cushing to Pemeta, Oklahoma, and from Jennings to Oilton, Oklahoma, tapping the so-called Cushing Oilfield, which is an important source of supply for fuel oil. A line from Pemeta to Oilton, connecting the railroads purchased, and an extension from Pemeta to Drumright are now under construction. The lines acquired, together with those now being built, will aggregate about 27 miles of railway, which, upon the completion of construction, will be operated, under lease, by your Company as a part of its system, and will, it is believed, make a valuable feeder to your main lines, with which it connects at Cushing.

OAKLAND WHARF PROPERTY.

The facilities on your Company's water frontage at Oakland, California, referred to under the above caption in the last annual report, were placed in operation July 1, 1915, though not fully completed.

ROCKY MOUNTAIN AND SANTA FE RAILWAY.

Reference was made in the last annual report to an agreement with the St. Louis, Rocky Mountain and Pacific Company, under which your Company took possession of this line (then known as the St. Louis, Rocky Mountain and Pacific Railway) on August 1, 1915, under a certain contract of purchase. The conditions of the purchase contract have been met and $3,000,000 of 4% Rocky Mountain Division Bonds have been issued in acquisition of the stock and indebtedness of the Rocky Mountain and Santa Fe Railway Company, which owns this line; and the line has been leased to your Company.

NORTH-WESTERN PACIFIC RAILROAD COMPANY.

Track laying on the line of this Company (whose capital stock is owned one-half by your Company and one-half by the Southern Pacific Company) from Willets to Shively, a distance of 105.64 miles, has been completed, and the line was placed in operation on July 1, 1915. This construction closes the gap in the mileage and has made possible the establishment of through train service between Eureka on the north and San Francisco Bay on the south.

UNION PASSENGER STATION, KANSAS CITY.

The new passenger station and appurtenant facilities at Kansas City, which have been in process of construction since August 1911, were placed in operation November 1, 1914. The new facilities constitute one of the largest and most complete passenger terminals in the country and represent a very large investment. The heavy fixed charge which this investment entails and the maintenance and operation of these extensive facilities place a large expense upon the Kansas City railroads, all of whom are using the new station; however, the new facilities are a great accommodation to the public and, of course, materially improve operating conditions at Kansas City.

TAXES.

Instead of showing the customary large increase, the fiscal year just closed shows a decrease in taxes of $28,268.55. The tax accruals for the fiscal year ending June 30, 1914, were $5,525,585.50, while the accruals for the fiscal year ending June 30, 1915, were but $5,497,316.77. However, information so far received pertaining to assessments and rates for the present fiscal year indicates the decrease was temporary only and that we will this year show another substantial increase.

In the report of last year your attention was called to the alarming growth of public expenditures, and the fear was expressed that expenditures for good roads were likely to assume large proportions. States are vying with States, and counties with counties, and the worst fears of a year ago are being realised. Road improvement and construction projects are approved and bond issues voted with but little regard to the ability of the taxpayers to bear the burden and with even less consideration of the utility and permanency of the roads. Yuma County, Arizona, well illustrates the recklessness with which people are now spending money. This county, with a population of but 7,730 and but little wealth other than railroad property, and having a bonded indebtedness of $173,751, has just approved a bond issue of $500,000 for the improvement of its highways.

Your officials are doing everything in their power to check the unwise and improper expenditure of public funds by arousing the taxpayers and by encouraging associations of taxpayers to fight for efficiency and economy. Their efforts have generally borne good fruit and encourage them to carry on the struggle.

REVISED ACCOUNTING RULES OF THE INTERSTATE COMMERCE COMMISSION.

The Interstate Commerce Commission, effective July 1, 1907, established classifications pursuant to the Act to Regulate Commerce, as amended, with the purpose of establishing a uniform system of accounts for steam roads. These classifications related to operating revenues and expenses, expenditures for road and equipment, and locomotive, car, and train miles; later these were followed by instructions pertaining to income, profit and loss, and balance sheet accounts. These classifications, which had been under review for a considerable period, were revised and reissued, effective July 1, 1914. Certain expenditures which formerly at the option of the carriers were chargeable to operating expenses, are, under the revised classifications, obligatory charges to capital account. As a result of these changes the operating expenses of your Company for the year covered by this report were relieved of charges aggregating upwards of $600,000, with corresponding increase in the charges to additions and betterments as compared with what they would otherwise have been. The greater part of this amount represents transportation charges on men employed and material used in improvement work, increased weight of second-hand rail, and necessary fastenings and appurtenances applied during the year in track renewals. The revised classifications also account for the change in the form of the General Balance Sheet as shown herewith.

GENERAL.

The year has been the largest as to earnings, both gross and net, in the history of the Company. Two reasons contributed mainly to this result, viz. the unprecedented wheat crop of Kansas and the largely increased yield of agricultural products of all kinds in the so-called "Plains Country" in Western Texas and Western Oklahoma. These two items were more than sufficient to overcome a falling off of $1,304,472.05 in net revenue of the lines west of Albuquerque.

The wheat of Kansas and Oklahoma was largely exported *via* Galveston, thus giving your properties the longest possible haul and the largest possible earnings, and this has created so marked an improvement in business of your Texas lines as to make their net earnings much more than ever before.

The Panama-Pacific Exposition at San Francisco and the Panama-California Exposition at San Diego have created some passenger business, but at such low rates as to afford little, if any, profit.

Relations with the general public, especially that portion residing along the line, are quite satisfactory, but contest is being made as to rates in various States before both commissions and courts. There is little demur to the proposition that the railroads need more money, but each class of shippers is firm in the view that the increase should not come from it.

The general merchandise rates all over the country (now lower than anywhere else in the world) could be doubled, and the ordinary living expense of each family would be so little increased that the head of the family would not know of this advance unless somebody told him. A large part of the trouble about rates comes from certain classes of middle men who contribute little to the prosperity of the country, but who are well organised, and consequently influential.

It is too early to measure accurately the effect of the Panama Canal. But it is evident that the loss of revenue on that account is very substantial, and already it probably is considerably in excess of $1,000,000 per year.

EDWARD P. RIPLEY, *President.*

MEETINGS
OF PUBLIC COMPANIES.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

THE twenty-seventh annual general meeting of this Company was held at Winchester House, Old Broad Street, E.C., on October 20, under the presidency of Sir Robert Harvey, the Chairman of the Company.

The Manager and Secretary (Mr. Albert K. Raphael) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and Gentlemen. I have now the pleasure to move the resolution: "That the report and balance sheet as distributed be adopted, and that a final dividend at the rate of 4*s.* per share, less income tax, be and is hereby declared payable on the 27th instant."

When we last met I was able to inform you that our Belgian colleagues were safe and well, and I am happy to be able to repeat that statement to-day, although Mr. Edward Bunge has remained in Antwerp practically the whole time since we had the pleasure of seeing him with us at our last meeting. As regards our staff, I regret to tell you that the English members of our Hamburg staff have been interned by the German Government, and we have done all we can to mitigate the inconvenience under which they are suffering by supplementing the supplies of necessaries and comforts of life as far as is permissible. The total number of our staff who have now joined His Majesty's Forces is 120, of whom about one-half came from South America for that purpose. It is with much regret that I tell you that no less than six of them have been killed in battle, and we feel sure that the devotion to their country which resulted in their sacrifice, in common with so many others, will be as highly appreciated by you as it is by the board and their colleagues.

Financing the War.

The financial arrangements which had been made by the English Government with so much efficacy a year ago have since been supplemented from time to time as became needful in order to meet the changing circumstances, and I am sure you will all have regarded with admiration their effectiveness. So far as they have affected trade they have been ample, and, in respect of the Argentine, have resulted in our receiving from that country all the foodstuffs that we required, at prices which, while naturally higher than former values, have yet represented by no means so great an increase as might otherwise have been expected. In regard to the financial arrangements, I should like to refer especially to two points. Firstly, the issue of the War Loans, so enthusiastically received by the public, and in which I may mention we have taken altogether £200,000—an operation which, with all confidence, we submit to you for your approval. Secondly, the Loan recently arranged in New York for the purpose of adjusting the American exchange, which has already had a marked effect.

The United States and South America.

The War has brought about many changes in business methods, and in particular caused important developments in the trade between the United States and the South American countries, resulting in an extension of direct financial operations between the two parts of the Western Continent, in which we have, by means of our New York office, the opportunity to take our part, and we are closely watching the trend of events with a view to securing our proportionate participation in that direction.

Crop Prospects in Argentina.

A year ago I was able to indicate to you that there were good prospects for the crops in the Argentine. This outlook has become an accomplished fact, and I may tell you that the export of wheat during the year has been 2,500,000 tons, as compared with 900,000 tons in the previous year, and there is available for export 5,000,000 tons of maize, of which only 3,000,000 tons up to now have been shipped, as against total shipments of 1,800,000 tons for the former year. It is not only in the quantity that the Republic has benefited, but in the price, which has been considerably higher. Wool has been shipped in about the equal quantity of last year, but here again the value has been favourably affected to the extent of probably 50%. The actual value of the exportation of meat shipped exceeds that of the previous year by reason of the improvement in price, although the quantity shipped is somewhat less. The benefit of all this exportation to the agriculturists and graziers cannot fail to show its effect in a little time by enabling the payment of mortgage and other debts, for which they were in many cases being somewhat urgently pressed. Even already the effect is being felt, and the general position of the whole community has very much improved. The importers have had a very bad year, the quantity of goods bought by the Argentine being small in comparison with former years, but should the coming crops prove up to expectation there will no doubt be a tendency to develop in the importation. The prospects of the coming crops are probably not equal to what they were last year, as, at the critical time of sowing, rains were badly wanted, and although this has been in part modified quite recently, the rainfall is still under the average. We have a telegram from our Buenos Aires Manager, received to-day, which states:—"Crop prospects: Wheat in general excellent. Oats very good owing to further rains. Linseed average. Maize too early to report, but expect some damage from locusts. Local financial position steadily improving."

The province of Mendoza, which, as you know, depends almost entirely upon wine production, has not been in a favourable condition for a year or two past, owing to overproduction and low prices. This has now, to a certain extent, improved, partly by certain effective local measures taken by the Government of the Province, and partly by the ability of the producers to raise the selling price of the wine to a point at which it shows a moderate profit.

The Chilean Nitrate Trade.

In Chile, the falling off in the demand for nitrate for agricultural purposes by the belligerent countries, who, as you will probably remember, formerly took about 60% of the supply, has been, in some measure, counter-balanced by the demand for nitrate for making explosives, and it is anticipated that the total consumption during this year will be about 40,000,000 quintals as compared with 60,000,000 quintals previously. The price of the commodity has improved very considerably, and is now 9*s.* 3*d.* per quintal, as compared with 6*s.* 6*d.* last year. The Companies have to face a considerable increase in the cost of manufacture, but we believe that in a great many cases this leaves, at present prices, quite a reasonable profit. The mineral resources of Chile are being increasingly developed, whilst in agriculture and cattle the country has had the benefit of improved prices. Magallanes, in Chile, and the corresponding district of Patagonia, in the Argentine, which depend chiefly on sheep farming, have derived great benefit from the improved prices of wool and meat, and our branches in that district have rendered us excellent service during the year.

The Fall in the Chilean Exchange.

You will observe that at the date of making up our balance sheet the Chile exchange had fallen to 7$\frac{15}{16}$*d.* per dollar. It is now 9*d.*, and, as you are aware, our capital in that country has already been written down to 10*d.*, which leaves only a moderate difference, with which we do not, on this occasion, propose to deal.

The Accounts.

I will now direct your attention to a few items in the accounts, and before doing so, I wish to remind you that we are making comparison with the period up to June 30, 1914, when we were not in any way affected by the War. In these circumstances, we are very glad to see that profits are reduced only by £10,000, from £279,000 to £269,000, which is more than accounted for by an increase of £12,000 in income tax. Expenses show a reduction of £23,000, part of which is due to the enforced exclusion of the figures at Hamburg office, and a further part to the lower rate of exchange at which the charges in Chile were converted into sterling. There is, however, outside these two items, a certain reduction in our expenses, and although it is very difficult to do much more in this direction, the point will continue to receive our very close attention, more especially during the time when our earning-power remains at the present level.

Current Year's Prospects.

I am afraid that I cannot hazard a forecast as to what our profits may be in the current year. Conditions of business have so entirely changed that it is unusually difficult to see far ahead; but I am pleased to tell you that the results for the quarter ended September 30 are very encouraging, and we, therefore, indulge the hope that we may, when we have the pleasure to meet again, have figures to submit to you which will be deemed satisfactory. Our earning-power has been affected considerably by the large surpluses of cash held by our branches in South America, who were unable to find the usual employment for them in the discounting of trade bills, owing to the great shrinkage in imports, and the result is evidenced by the fact that our cash in hand had increased by over £500,000 in the year.

Depreciation of Investments

You will observe that our investments in first-class securities have increased by £260,000, and I have already explained to you in what way this chiefly arises. I am sorry to say

that we have to deal with a depreciation in the general value of securities, which will indeed, I expect, not surprise you, and we have thought it best to write down the book prices out of the profits to those current at the date on which we make up our accounts, because, in present circumstances, it is impossible to foresee if the values will eventually reach their former level. Personally, I think that with the great wastage of capital that is involved in the War they will not do so, although there may, and probably will be, a certain amount of recovery, of which, if it should come to pass, we shall feel the benefit in future years. I may mention that the values at the present date are fully equal to those at June 30, so that you can rest assured that at the present moment the item of £1,850,000, at which our investments figure, is the actual value to-day. Our bills payable and bills receivable show a large shrinkage, due to the smaller turnover in exports and imports. Our deposits show a slight increase, which, in the circumstances, is very gratifying.

Dividend Maintained.

Regarding the distribution of our profits, we have decided to propose the same dividend as in April last—viz., 4*s.* per share—making 8% for the year. We make the usual contribution to the staff pension fund, write down the investments, and have to carry forward £133,000, or £23,000 more than was brought in. We consider that the correct and prudent policy at present is not to exceed this percentage of dividend until conditions have become more normal, and in the meantime to steadily increase the amount carried forward, so that an appreciable amount may be available to meet any contingencies which may arise, although at present we have no definite indications thereof.

I cannot conclude without specially mentioning the services of the staff abroad and at home. They have served us loyally and well in a time of undue anxiety, and it gives me special pleasure to mention the fact in a year of such stirring events requiring exceptional and strenuous effort.

I now beg to move the resolution which I have read, and when this is seconded I shall invite any comments which you may have to make in reference to the report now submitted.

Mr. Thomas Woodsend: I have much pleasure in seconding the resolution.

No questions being asked, the motion was put and carried unanimously.

The Chairman: I now beg to move: "That Mr. Auguste de Lantsheere and Mr. Thomas Woodsend, two of the retiring directors in accordance with the articles of association, be and hereby are re-elected."

Mr. Alfred Naylor seconded the resolution, which was unanimously agreed to.

On the motion of Mr. J. Russell Gubbins, seconded by Mr. Urquhart, Messrs. Price, Waterhouse and Company were re-elected auditors for the year ending June 1916.

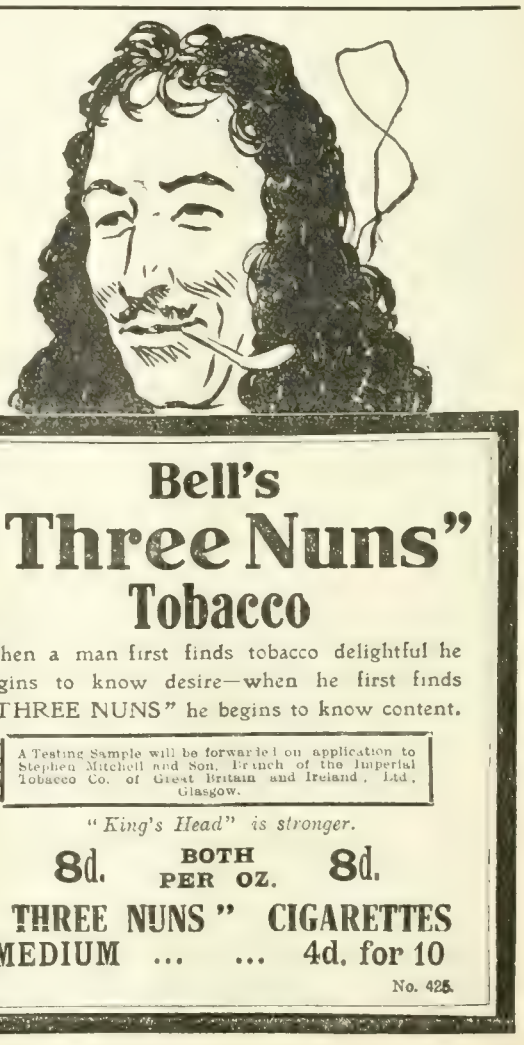
Vote of Thanks to Directors.

Mr. M. B. Snell: Mr. Chairman and Gentlemen,—I should like to say a few words before we part if you will allow me to do so. I was very pleased indeed to hear the remarks made by the Chairman with reference to the staff. His words that "they have served us loyally and well in a time of undue anxiety" were very apt. I am sure that we all agree with your remarks, Sir, but I should like to add that I am certain it is the wish of the shareholders present to pass a hearty vote of thanks to the directors for the way in which they have carried on our business during the past twelve months. We all know—people in the City more particularly—the very anxious times we experienced a year ago; and what, therefore, must it have been for the directors of a large Bank like this? They must have had a very trying and anxious time. I think that we cannot be too thankful for the mercies which have been vouchsafed to us up to the present, and we hope that before the year is over peace may be re-established, and that we may again go ahead and make improved profits. In that case I cannot help thinking that North America and South America will prove to be among the most prosperous parts of the world.

Mr. J. Wentworth Smith seconded the motion, which was unanimously carried.

The Chairman: I thank you very much indeed, ladies and gentlemen, for your most kind and complimentary vote of thanks, which I am sure we all appreciate very much. In my speech I made no remarks with regard to any particular members of the staff, but now I have much pleasure in saying that the heat and burden of the day has fallen chiefly on the shoulders of the Managing Director, who has met the difficulties of the situation in the most admirable way. He and the managers abroad and at home, with their staffs, are as much to be thanked as the directors, and probably more so. I very much appreciate your kind vote of thanks, and I hope that we shall have an equally good, if not a better, showing when we next meet.

The proceedings then terminated.



NORTH ANANTAPUR GOLD MINES, LIMITED.

THE eighth ordinary general meeting was held on October 20 at 6 Queen Street Place, E.C., Mr. John Taylor, M.Inst.C.E., Chairman of the Company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: The Company has now been producing gold for five years. In the twelve months to June 30, 1911, the return was of a value of £18,629, and each succeeding year has shown a steady increase, the value of the gold obtained during the period under review being £62,945. As compared with the previous year, we have thus an increase of £16,057, which is attributable to the fact that the ore milled has been of a higher average grade. Our acting superintendent, Mr. Vivian, deals especially with this in his report, and points out that, for the reasons he gives, we must expect a decrease in the average value of the ore to be treated during the current year; but, as an increased quantity will be obtainable, the output of gold should not be affected. The position in this respect we may, therefore, I think, consider satisfactory. The revenue costs for the year amounted to £38,142, and the receipts (after making due allowance for royalty payable), to £62,785, a profit therefore remaining of £24,643. This compares very favourably with the preceding year, when the profit was £11,932. From the profit and loss account you will observe that a credit balance of £731 was brought forward from the 1914 account. Interest amounting to £55 and the profit for the year of £24,643 are also credited, the total on this side of the account being £25,429. Against this various items are debited, amounting to £16,604, leaving a credit of £8,825. There is one item here which, perhaps, requires a word of explanation—the £8,500 carried to suspense account. The amount has been thus dealt with in order to meet any contingent liability which may arise through the introduction of new taxes in the Budget now under consideration. In the event of the £8,500, or any part of it, not being required to meet additional taxation, the directors propose to apply it to writing down the value of the buildings, machinery, and plant account in the balance sheet. The additions to these items of buildings, machinery, and plant at the mines during the year amounted to £8,690, the particulars of which are set out in the acting superintendent's report, a copy of which accompanies that of the directors.

Increased Dividends.

The distribution of dividend out of the year's profits amounted to 5*s.* per share on the Preference shares and 1*s.* per share on the Ordinary shares, both less income tax, these payments comparing with 4*s.* 6*d.* on the Preference and 6*d.* on the Ordinary shares for the twelve months ended June 30, 1914. Since the date of our last annual report a

further 2,005 Ordinary shares of £1 each have been allotted, so that the present issued capital is 76,253 Ordinary and 25,000 Preference shares of £1 each, all fully paid. The financial position of the Company is quite satisfactory, the assets amounting to £30,724 and the liabilities to £6,747, leaving a balance of assets of £23,977, in addition to which the materials and stores at the mines were valued at £7,342 and the machinery and goods in transit at £614. I will not occupy your time in speaking of the mining operations, as Mr. Henry Taylor will address you on this subject and give you particulars of the work carried out underground during the year. I may, however, mention that the reserves of ore at the close of the year were computed at 54,000 tons, as compared with 52,000 tons at the corresponding date of 1914.

Mr. [illegible] C. Ellis seconded the resolution.

Mining Operations Described.

Mr. Henry Taylor: Our principal shaft, called No. 5 shaft, was sunk 157 feet during the year, and at the date of the most recent advices from the mines its total depth was 971 feet. The crosscut east to the reef at the 950-foot level has been started and driven 25 feet. At the 850-foot level driving was started during the year from the main winze, which is 350 feet north of the shaft. The present length of this level is 200 feet, and for 35 feet the lode has averaged 5 feet in width and assayed 11 dwt. per ton. Stripping at a point 160 feet distant from the winze in this level has proved a width of 14½ feet of solid quartz, which assayed 1 oz. 5 dwt. per ton, and north of this the western or footwall of the reef diverges rapidly, and apparently its width increases. The level is now in proximity to the east and west dyke, some 40 feet wide, and a great deal will depend on what is found on the further, or north, side of this. The 750-foot level above was driven 430 feet during the year, and passed through a length of 223 feet of quartz from 3¼ to 15 feet in width, the assays ranging from 2 dwt. to over 2 oz. per ton. For 170 feet the lode proved from 3 feet 6 inches to 5 feet in width, with a value of from 2 oz. 1 dwt. to 1 oz. 7 dwt. per ton. This level is also near the east and west dyke I have just mentioned, and has been suspended until the deeper level has been driven through it. The ore stoped during the year has shown an improvement in grade from 9¾ dwt. to close on 13 dwt. per ton. On a wide lode of this sort a system of "shrinkage" stoping has to be adopted, both for reasons of economy and safety in working, and it is difficult with this system to regulate the grade of ore sent to the mill from month to month. There is no doubt that at a future date we shall see the grade again somewhat reduced.

The Ore Reserves.

After milling 22,860 tons of rock in the past year, the reserves of ore in the mine at the close of the year were estimated at 54,000 tons. In these figures credit has been taken for only a small tonnage below the 750-foot level, because the reef had only been carried in sinking to a depth of 31 feet below that level. A width of 3 feet of quartz was, however, exposed, which averaged 1 oz. 11 dwt. per ton. A considerable amount of exploration has been carried out at the 750-foot level south, but so far no discovery of importance has been made in this direction.

The resolution was carried unanimously.

DICK, KERR AND COMPANY, LIMITED.

The extraordinary general meeting was held on October 21 at the Cannon Street Hotel, Cannon Street, E.C., Mr. Claud T. Cayley (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report, said: Just over a year ago, when we last met, I fancy the large majority of us fully anticipated that before we met again the War would be over and we would be in a position of considering our own affairs from a normal point of view. As it is, the position remains much as it was. We are in a state of suspense, living from hand to mouth as it were; all our normal development is stopped, and our energies are transferred to the special requirements of the time. I told you last year that, in the opinion of your directors, the Company would experience some lean years after the War before we could hope for the re-establishment of our standard business, especially in heavy manufacturing, and I have no reason to alter this opinion. The profit on this year's trading is principally derived from orders and contracts taken before the War, and these are gradually falling in to a finish. As can be readily understood, they are not being replaced by others of a similar nature, so that, although we are busy now on abnormal work, there is bound to be a transition period, occupied in re-establishing normal conditions, and it is because of this that your directors cannot see their way to recommend a dividend on the Ordinary shares. They feel that some reserve must be made to bridge over that period. I have mentioned that we are busy now, but not on normal work, and, although your directors are primarily pleased because they believe we, as a Company, are assisting the Government to a material extent, they are also hopeful that some reasonable profit proportionate to the efforts being made will be permitted—sufficient at all events to make it unnecessary next year to put such a large percentage of profit to reserve for contingencies. Clear indications, however, have been given, first, in the Munitions Act, and, secondly, in the Budget, of the Government's intention to absorb excess profits, especially if derived from work due directly to the War. No person can object to this principle, but, at the same time, no one, at all events outside of the Government, can predict to what extent it will be applied, and it therefore behoves us to be ultra-conservative in dealing with our accounts at the present time.

Mr. R. H. Prestwich seconded the motion, which was carried unanimously.

LEACH'S ARGENTINE ESTATES, LIMITED.

The third ordinary general meeting was held at Winchester House, E.C., on October 22, Mr. W. E. Leach presiding.

The Chairman first dealt in detail with the figures appearing in the balance sheet and profit and loss account, and stated that the net profit in the Argentine amounted to £110,198. Proceeding, he said that the consideration of the figures presented must necessarily leave a sense of great disappointment, following as they did on those of the previous unsatisfactory season. In the season under review the climatic influences were again abnormally favourable to the growth of cane. In order to meet the situation created by the over-production and to avoid an absolute disaster to the industry, an agreement was arrived at by which nearly all the factories producing their class of sugar agreed to export at least one-third of their respective output. Owing to the reduced spending power resulting from the general crisis, the local sales were considerably less than in previous years, though the price was still fairly profitable. Unfortunately, the excess of production over requirements was so large that, of this Company's crop of over 26,000 tons, they were finally only able to realise in the country some 9,000 odd tons, the balance of about 17,000 tons having to be exported. At the date of the last general meeting a fairly successful season was anticipated, as, at that time, they expected to realise at least one-half of their production locally at remunerative prices, and the balance in England. The prices then ruling in England for this Company's classes of sugar, viz., £24 per ton, were sufficient to leave a very fair margin of profit after allowing for maritime freight of about 24*s.* per ton, and all other expenses, including duty. Unfortunately they had only about 4,000 tons shipped to Europe when the British Government prohibited further imports into this country. Several months elapsed before the Royal Commission on Sugar Supply itself came into the market for Argentine sugar. By that time freights from the River Plate had risen to 65*s.* per ton, and, the price obtainable from the Royal Commission for the Company's sugar being an average of £19 c.i.f., without duty, against the former market price of £24, with duty, the whole margin of profit, viz., about £4 per ton, disappeared. In the intermediate period the Company's local sales continued to be small, so that they deemed it expedient to make a sale of 7,000 tons to the Royal Commission at the price mentioned. The balance of their exports to Europe went to France, and the price realised was also greatly affected by high freights. The present financial position of the Company showed a gratifying improvement. They had no overdrafts in Argentina; their loans from bankers were reduced from £158,140 to £14,820, and all they now owed, in addition to current trade debts, was £134,364, due to the vendors. A no less gratifying improvement had taken place in the Argentine sugar market. The two successive years of abnormally high production in the Republic had been followed by a crop which, it was estimated, would reach only 147,000 tons, against 335,000 tons last year and 280,000 tons in 1913. The management of this Company anticipated a total crop of 20,000 tons, against 26,461 tons last year and 18,121 in 1913. Prices had gradually risen to their old level, and the prospects with regard to profits were considered amply to justify the payment of an interim dividend of 6% on the Preference shares, for which funds were in hand. He thought they could look forward with genuine confidence to the future.

The report was unanimously adopted.

San Lorenzo Nitrate Co.—Interim dividend of 2*s.* per share, tax free.

Spiers and Co.—Further dividend on Ordinary shares of 7%, less tax, making 10% for the year.

Spillers and Bakers.—Interim dividend on Ordinary at rate of 5% per annum, less tax.

Sungei Kedah Rubber Estate.—Interim dividend of 6 on Ordinary.

Sungei Kapar Rubber Co.—Interim dividend of 12½%, less tax.

Travancore Tea Estates Co.—Interim dividend of 25%, less tax, on Ordinary.

Trust and Agency Company of Australasia.—Interim dividend of 6*d.* per share, tax free, on Ordinary.

OROVILLE DREDGING.

THIS Company's year ended on September 30, and, though the annual report does not usually make its appearance until December, it is possible, now that the dredge returns of its chief subsidiary—the Pato Mines (Colombia)—for the 12 months to end September have been published, to arrive at a good idea of the Oroville's earnings and at the same time gauge its future prospects. The English Oroville Company, which has an issued capital of £668,000, in £1 shares, is a purely parent undertaking. It holds about 95½% of the share capital of an American concern, the Oroville Dredging, Limited, which conducts dredging operations in California, but only a small profit is earned in this connection. The American concern, however, has a much more important interest. At September 30, 1914, it held 70,000 out of 100,000 £1 shares of the Pato Mines (Colombia), Limited, and also the whole of an issued £226,000 of Pato Mine's 8% Income notes, which are redeemable at par before any Ordinary dividends can be paid by the Pato.

As the English Oroville Company holds 95½% of the capital of the American Company it follows that its interest in the Pato is nearly 69% of the Pato's Ordinary capital and 95½% of the Income notes. In addition the English Company holds a large direct interest in the Nechi Mines (Columbia), Limited, another gold-dredging undertaking in the vicinity of the Pato area. The Nechi capital consists of 140,000 Ordinary 10*s.* shares and 140,000 Preference 10*s.* shares, which are first entitled to receive 100% and thereafter 25% annual dividends. The Preference shares have 9*s.* per share called up. Of the Nechi 140,000 Ordinary shares the English Company holds 126,000, and the balance of 14,000 shares is held by the Pato Company. Altogether, therefore, the English Oroville Company is interested to the extent of 95½% in the Nechi's Ordinary capital, but has no interest in the Preference. The following summary of the interests makes the position clear:—

OROVILLE DREDGING CO., LTD. (ENGLISH).—Capital, £668,000, in £1 shares.
Holds 667,993 (out of 697,936) $5 shares of Oroville Dredging, Ltd. (American);
126,000 (out of 140,000) Ordinary 10*s.* shares of Nechi Mines (Colombian).

OROVILLE DREDGING, LTD. (AMERICAN).—Capital, 697,936 $5 shares.
Holds capital of four Californian Dredging Companies.
70,000 (out of 100,000) £1 Ordinary shares of Pato Mines (Colombia), Ltd.
£226,000 8% Income Notes of the Pato Mines (Colombia), Ltd.

PATO MINES (COLOMBIA), LTD.—Capital, 100,000 Ordinary £1 shares;
8% Income Notes, £226,000.
Holds 14,000 Ordinary shares of Nechi Mines.

NECHI MINES (COLOMBIA), LTD.—Capital, 140,000 Ordinary 10*s.* shares:
*140,000 Preference 10*s.* shares.

* Entitled to first receive 100%, and thereafter 25% dividend.

In view of the approaching exhaustion of the Californian properties, the future of the Oroville depends upon its large interests in the two Colombian dredging undertakings. Of these the Pato holds 40,000 acres of ground, and at October 1, 1914, 529 acres tested and proved were estimated to contain 22,419,000 cubic yards of a gross value of $7,092,000, equal to an average yield of 31½ cents per cubic yard. The Pato Company has one dredge in operation, which commenced work on December 24, 1912, but did not reach the tested area until August 1913. To date the gold yield of the ground dredged has been considerably in excess of the estimated average of the whole area. This will be seen from the following table of the dredging results since commencement to end September last:—

Pato Operations.

Year to Sept. 30	Cubic Yards Dredged	Value of Gold Yield	Cubic Yards' Cents.
		$	
1913*	645,920	151,255	23·4
1914	921,188	598,000	64·9
1915†	1,421,679	617,200	43·5

* Dredge commenced work December 24, 1912, and for first 7 months worked out side of tested area.
† For 2 months dredge operated in ground of very low value outside the tested area.

It will be noted that mainly on account of the dredge operating for two months outside the tested area, the yield in respect of the financial year ended September 30, 1915, was considerably lower than in the preceding twelve months. The effect of this, however, should be offset by the much larger quantity of material treated and the consequent reduction in working expenses. For the first complete year of operations ended September 30, 1914, the costs amounted to 18.4 cents per cubic yard dredged, but general and office expenses brought up the total expenditure to 23.2 cents per cubic yard, the net profit of the twelve months amounting to $383,595, or £78,975, equal to 41.7 cents per cubic yard dredged, as follows:—

Pato Results, Year to September 30, 1914.

(921,488 cubic yards dredged.)

	$	Per Cubic Yard. Cents	£*	Per Yard. *d.*
Value of gold	598,000	64·9	123,045	32·4
Expenditure—				
Operating costs	169,805	18·4	34,962	4·2
General and office expenses	35,721	3·9	7,352	2·0
Interest, depreciation	8,816	·9	1,814	1
Total expenditure	214,405	23·2	44,078	5·6
Net profit	383,595	41·7	78,975	10·8

* Exchange $4.86.5.

The Pato Company paid no dividend on its Ordinary shares in respect of the 1914 period, the large net profit of £78,975 being devoted to paying interest on the Income notes, liquidating existing indebtedness, and greatly strengthening the financial position in the following manner:—

Pato Company, Year to September 30, 1914.

Net profit	£78,975
Sundry Revenue	770
	79,744
Income tax, stamp duty and preliminary expenses	1,725
Surplus profit	78,019
Interest on Income Notes	18,080
Balance from previous account	3,932
Amount carried forward	23,871
Surplus brought forward*	32,957
Less Capital Expenditure	7,000
Net Revenue	25,957
Amount applied in reduction of Overdraft	2,086

* Before payment of Australian Income Tax on Oroville Income.

It will be noted that in respect of the year to September 30, 1914, the only revenue the Oroville Company received from its Pato interest was represented by the £18,080 interest on the Income notes. In addition, however, the large sum used for liquidating the Pato's indebtedness enabled the Oroville Company to pay off a loan of £24,260 which it had contracted for the purpose of lending money to the Pato. Thus the Oroville's financial decks have been cleared also. The Pato entered the year just ended with surplus liquid assets amounting to £20,958, against which it owed £32,197 by way of accrued interest on Income notes. As above shown, during the year to September 30, 1915, the Pato's revenue from the dredging of 1,421,679 cubic yards of ground was $617,200, equal to 43.5 cents per cubic yard. The Company's consulting engineer estimated that, with one dredge in full operation, operating costs should not exceed 12 cents per cubic yard, which is much lower than the 18¾ cents per cubic yard in the year to September 30, 1914, when the dredge worked to about two-thirds of full capacity. Then, too, general and office expenses per cubic yard would be much less on a

greatly increased quantity of material handled. In the circumstances an estimated total working cost of 16 cents per cubic yard for the year ended September 30, 1915, should be well within the mark. Assuming it is, and allowing a rate of exchange of, say, $4.80, against $4.86 in the previous year, the estimated earnings, expenses, and profits of the Pato, based on the dredge returns of the financial year just completed, should be as under:—

Estimated Pato Results, Year to September 30, 1915.

(1,421,679 cubic yards treated.)

		Total Value	Per Cubic Yard
	$	£*	s.
Value of gold	681,[illegible]	135	1.9[illegible]
Total expenditure	225,[illegible]	1[illegible]	[illegible]
	[illegible]	[illegible]	[illegible]

*Taken at $4.80.

Assuming the above calculation to be approximately correct, it remains to be seen how an estimated net profit for the Pato for the past financial year of £81,000 would affect the Oroville. Adding in £23,781 credit balance from 1914, the total available would be £104,871. Accrued and current Income Note interest would require [illegible], and of the balance of £64,800, £60,000 could be applied to the redemption of Income notes, reducing the amount outstanding at September 30, 1915, to £162,000. The English Oroville's 95½% share of this disbursement of £100,000 would be £95,500, and addition of a small revenue of, say, £5,000 from the Californian operations would make its total revenue, say, £100,000, with no necessity to deduct office and general expenses, which are about balanced by sundry revenue. So far on account of the current year the Oroville has paid three quarterly dividends aggregating 7½%, which absorb about £49,000 out of the £100,000 we have assumed to be available as the figures above set out. Consequently it looks as if the Oroville Company's receipts on account of the year to September 30, 1915, very largely exceeded the dividend payments so far made, and it would seem that a final dividend, making at least 10% for the year, will be declared when the report is issued. Whether the distribution will actually exceed 10% depends upon whether or not the directors decide to use surplus funds for the purpose of providing a second dredge for the Pato. At the full rate of output of the present dredge the estimated [illegible] in the 529 acres of tested area would last about 15½ years from October 1, 1914—[illegible] The provision of a second dredge would halve the life but more than double the profit to be earned, owing to considerable reduction in working costs.

Turning now to the second important string to the Oroville Company's bow. The new dredge of the Nechi Mines (Colombia) commenced working pay ground in the middle of last month. The dredgable [illegible] taining 6,855,900 cubic yards of a gross value of [illegible] 71 [illegible] ing from the experience of the Pato, actual working may show the Nechi's ground to have an even better value than is estimated. However, on the basis of an average yield of only 70 cents per cubic yard, the Nechi's new dredge, of a capacity equal to the Pato's, should deal with at least 1,200,000 cubic yards per annum, in which case the gold yield would be about £170,000. Allowing 16 cents per cubic yard for total working costs, as we have done with the Pato—the Engineer expects considerably less than this—the total expenditure would absorb £40,000, leaving £130,000 net profit per annum. If this rate of profit is earned it would enable the 100% on the Preference shares and also their 25% interest, together requiring £87,500, to be paid and leave £42,500 for distribution on the Nechi's Ordinary capital of £70,000 in the first year. The Oroville's 95½% share of the Nechi's Ordinary distribution would be £40,000. This is for the first year. In subsequent years, after the satisfaction of the 100% on the Preference, the Oroville's shares of Nechi's profit of, say, £130,000 per annum would be £112,000.

In the current financial year it may be conservatively estimated that the Oroville will receive £65,000 from the Pato, plus £40,000 from the Nechi, together, say, £105,000, representing about 15% on its issued capital. In subsequent years, assuming the Pato's recent average rate of earnings is maintained, and Nechi's results come up to anticipations, the Oroville's receipts from the two shareholdings should be sufficient, until the Nechi is exhausted, to pay between 20% and 30% on its capital, according to the yield obtained by the Pato. The life of the Pato is, say, 14 years from now and the Nechi's about 5½ years on the dredging of 1,200,000 cubic yards per annum. From the Pato in 14 years the Oroville should receive at least 120% on its capital, and from the Nechi about 90% in, say, 5½ years, making altogether over 200%. In view of these calculations, which may be considered conservatively based on Engineer's estimates and results already shown, Oroville £1 shares, priced in the market at 14*s.*—a discount of 30%—offer to the investor the prospect of a very good return in a short period of time.

RAND GOLD OUTPUT.

The Agency of Colonial and Foreign Banks is undertaken, and the Acceptances of Customers residing in the Colonies or elsewhere abroad domiciled in London are retired on terms which will be furnished on application.

The Officers of the Bank are bound to secrecy as regards the transactions of its Customers.

THE TOMBOY GOLD MINES CO. LIMITED.

The Annual Ordinary General Meeting will be hld at Winchester House, Old Broad Street, E.C., on Thursday, the 28th day of October, 1915, at 2.30 p.m. precisely.

REPORT.

The Directors beg to submit their Report and audited Statement of Accounts for the year ending 30th June, 1915, which show a realised profit of £79,705 0 11
To this must be added Balance brought forward from the last Account 47,792 0 0

Making a total of £127,497 0 11

This amount has been dealt with as follows:—

Dividend No. 27, 2s. per Share, 30th December, 1914	£31,000	0	0	
Dividend No. 28, 1s. per Share, 30th June, 1915	15,500	0	0	
Written off Plant and Machinery ...	49,486	8	10	
Amount written off cost of holding in the Tomboy Tramway and Tunnel Company	2,732	4	9	
Income Tax paid and reserved	8,000	0	0	
Balance carried forward	20,778	7	4	
				£127,497 0 11

THE ACCOUNTS.—It will be seen from the foregoing tabular Statement that an exceptional amount has been written off Plant and Machinery. Following the precedent of previous years, the whole expenditure on new Plant has thus been dealt with, while on this occasion the Directors have considered it advisable to write off an additional £18,000, raising the total written off to £49,486 8s. 10*d*. The Profit and Loss Account is thereby brought into harmony with the actual financial position of the Company.

MILLING.—A table is appended giving the Milling results for the period under review. From this it will be seen that 145,857 tons of ore have been milled, from which bullion to the value of $1,027,524 has been realised, at a cost of $654,647, resulting in a profit of $372,877. If to this profit be added Dividends from the Tomboy Tramway and Tunnel Company, $10,000, and receipts from other sources, $13,345, the total surplus on the year's working will be found to correspond with the figure given in Mr. D. A. Herron's Report, namely, $396,222. The average working costs for the year, including all expenses in America and London, were $4.58 per ton.

THE MINES.—A plan and section of the Company's properties are annexed hereto.

ORE RESERVES.—In his Report Mr. Herron gives the following estimate of the ore reserves exposed by present developments:—

In the Argentine Group of Mines	185,000	tons
In the Montana property	350,000	,,
Total	535,000	,,

THE ARGENTINE GROUP.—The development work in this Section has again been on a small scale, vigorous opening up of the Montana Group having been the main object of the year's operations.

THE MONTANA GROUP.—Good progress has been made during the year in developments in this Section, particulars of which will be found in Mr. Herron's Report. Ventilation of the Mine has already been greatly improved; and still further improvement is being made in this direction, which will materially facilitate future operations.

The programme of development foreshadowed in the last Report has been successfully carried out, and although Mr. Herron states that the exceptionally favourable results of the previous year's operations have not been quite equalled during the period under review, the net results have been encouraging, and, as will be seen from the figures given above, the reserves of ore have been substantially increased.

PLANT AND MACHINERY.—The Mill and Concentrating Plants have been operated satisfactorily during the year, on the same lines as before, and have been maintained in full efficiency.

The Cyanide Plant commenced running about the middle of December last. The extraction having been found to be below that indicated by the preliminary experiments, Mr. Betty, the Company's Metallurgical Adviser, visited the property last June to consult with Mr. Herron as to the best way of rectifying the deficiency. After experiments made on a practical scale in the whole plant, it was decided to add three Dorr thickening tanks. Mr. Herron informs the Board that these additions to the plant came into operation on the 20th of last month, and were running quite satisfactorily.

THE AERIAL TRAMWAY.—The exceptionally severe snowstorms of last winter inflicted considerable damage upon this installation, and led to a suspension of its operation for ninety-six hours. Two of the supporting towers were carried away, but the prompt measures taken by Mr. Herron to repair the injury reduced the loss to a minimum, and he has adopted effective means to prevent, as far as possible, a recurrence of similar accidents. The whole cost of this installation has now been written off.

MANAGEMENT.—The Directors desire again to record their warm appreciation of the services rendered by Mr. Herron in his able management of the property during the past year, and of the loyalty with which he has been supported by the staff.

BOARD OF DIRECTORS.—The Marquis d'Hautpoul, the Director retiring by rotation in accordance with the Articles of Association, being eligible, offers himself for re-election.

AUDITORS.—Messrs. Deloitte, Plender, Griffiths and Co., of 5 London Wall Buildings, E.C., Chartered Accountants, offer themselves for election as the Company's Auditors for the current year.

ARTHUR BUTLER, }
J. H. M. SHAW, } Directors.

To the Shareholders of THE TOMBOY GOLD MINES COMPANY LIMITED.

We have examined the above Balance Sheet, dated 30th June, 1915, with the Books and Vouchers in London, and have obtained all the information and explanations we have required.

In our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given us, and as shown by the Books of the Company and the Returns from the Mine, certified by the Manager and Accountant.

OFF THE BEATEN TRACK IN LONDON.

No. 2 MAYFAIR.

Whitehorse St., in the middle of Piccadilly, leads down past the Naval and Military Club (formerly Lord Palmerston's town house) into Shepherd Market with its quaint courts and shops, a little-known backwater. Here the May Fair, after which the district is named, was held in its closing years. Beyond, in Curzon St., stands Crewe House in its garden, like a country mansion lost in London. Chesterfield House, where Dr Johnson, in bad humour, waited upon Lord Chesterfield, is at the western end, and opposite is the house (No 19) where Lord Beaconsfield died. At the eastern end a leafy passage runs between Lansdowne House and Devonshire House into Berkeley St. The iron bars at either end were put up after a mounted highwayman had escaped through the passage. No. 45, Berkeley Square was the house of Lord Clive, where the founder of our Indian Empire died by his own hand, in 1774. Nearly every street around has houses bearing tablets commemorating famous residents

By ROUTES Nos 9, 14, 14A, 15, 19, 22, 25, 25A, 33, 38, 38A, 95A, 9[illegible] about it at Whitehorse St.

NEW ZEALAND.

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

An Ideal country for the farmer, the percentage of grain and lambs being phenomenally high.

New Zealand, a country as large as the United Kingdom, with but a million population, has an annual export of raw products exceeding Twenty Million Pounds sterling.

NEW ZEALAND is rich in COAL, IRON, TIMBER, GUM, GOLD and SILVER.

Total yield of Minerals, over One Hundred and Twenty Million Pounds.

Over Eighteen Million Pounds have been advanced by Government to Farmers and Workers for Improvements and Buildings at a low rate of Interest.

The Railways, 3,000 miles, Telegraphs and Telephones, 124,000 miles, are owned and operated by the State.

New Zealand has the highest wealth-rate and the lowest death-rate in the World.

To those desirous of making a home in a new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

Full information is supplied free by

GOVERNMENT OF SOUTH AUSTRALIA.

NOTICE TO HOLDERS OF £[illegible] SOUTH AUSTRALIAN 4 PER CENT BONDS DUE 1st JANUARY, 1916, AND £[illegible] DUE 1st APRIL, 1916.

The Commonwealth Bank of Australia is authorised by the Government of South Australia to offer to Holders of above Bonds conversion into an equal amount of South Australian 5 per cent. Bonds on the following terms:

Holders of Bonds due 1st January, 1916, to receive in exchange for each £100 of 4 per cent. Bonds converted £1 10s. 0d. per cent. on the difference between the par value of the Bonds and the issue price of the new Bonds, together with 10s. 0d. per cent. on the amount of interest at 4 per cent. from the date of last payment of interest to 1st April, 1916, less coupon for Interest payable 1st April, 1916.

Holders of Bonds due 1st April, 1916, to receive in exchange for each £100 of 4 per cent. Bonds converted £1 0s. 0d. per cent. on the difference between the par value of the maturing Bonds and the issue price of the new Bonds, together with interest at 4 per cent. from the date of last payment of interest to 1st April, 1916, less coupon for Interest payable 1st April, 1916.

The half-year's coupons, due 1st January, 1916, and 1st April, 1916, respectively, on the Bonds converted, to be retained by the holders for payment in due course.

Principal repayable at par on the 1st April, 1923, the Government of South Australia having the option of redeeming at par on or after 1st April, 1916, on giving three calendar months' notice.

Holders of 4 per cent. Bonds exercising the option to convert must lodge their Bonds and the prescribed form of assent with the Commonwealth Bank of Australia, 36-38 New Broad Street, London Any Bonds not converted will be paid off at maturity.

The Lists for conversion will be open until Close on Thursday, 4th November, 1915.

Forms for conversion can be obtained at the Offices of the Commonwealth Bank of Australia, 36-38 New Broad Street, London, E.C.; Messrs. R. Nivison & Co., Bank Buildings, Princes Street, London, E.C.; and the Agent-General for South Australia, 59 Gresham Street, London, E.C.

MONEY.

CHEAPER TREASURIES.

A CHANGE in the rates at which Treasury bills are on sale was, as generally expected, at last announced on Wednesday, the new rates being 4¾% for three months', 4⅞% for four months', and 5% for nine or twelve months'. The rates, like the movement, were just as expected; but now that the change has happened, the market is still as puzzled as ever to know why it should have been brought about. As far as the home demand is concerned, the lower price of Treasuries will, it is contended, make little or no difference to the extent of the market's absorbing power. There was already a keen demand for the replacement of maturities when it was checked by hints and rumours to the effect that those who waited would get bills cheaper. Before the change was made the rates for Treasury bills compared favourably with the yield to be earned by an investment in War Loan, and any surplus that the market possessed could have been relied on by the Government. If still heavier applications were required, a little judicious advertisement and a lowering of the denomination of the bills offered would have brought in plenty of funds from investors, many of whom are accumulating balances ready for the next War Loan, and would gladly have taken Treasury bills for the time being.

It is understood, however, that the powers that be are hoping, by this rise in rates, to induce American money-dealers to place their surplus funds in yearling bills to a considerable extent, and so to stimulate a demand for sterling in New York. If this hope is realised, something will have been gained, but it is suggested that a little ingenuity might have avoided the necessity for paying higher rates to English buyers, who were already feeding freely at the old rates, in order to attract the appetite of the more fastidious Americans. For it is objected by market critics that it is not only the home buyers of Treasuries who are being demoralised by this unwholesome and unnecessary process, but also the prospective applicants to the next War Loan. If a yearling Treasury can be bought to pay over 5¼%, with the certainty of one's capital back intact, what sort of rate, it is asked, will the Government have to offer when it wants a few hundred millions of money, repayable years ahead? There is a good deal of ground for the market's bewilderment, and it is certainly difficult to account for the Government's action in thus deliberately depreciating its own credit. Nevertheless, the New York Exchange has actually been a little firmer in the last few days, and it is just possible that this has happened because the Americans are buying long Treasuries.

No pressure on the market was produced by the payment of the last instalment on the War Loan. Money can only be wanted nowadays when either the Government or the Bank of England is sitting on so much of it that all the effects of inflation are for the time being obliterated. At the present moment the Government balances are low, and the Bank, though it is doing something to relieve the weight of artificially created money, has not yet carried its operations far enough to make a very material difference, and so there is enough, and more than enough, to go round. Gold goes abroad steadily in large amounts, but owing to the activity of the printing press, this export of gold has little or no effect in producing the stringency which used in normal times to be its corrective and cure, and even now would have some influence in that direction if it were not counteracted. But as long as the Treasury issues uncovered notes, as fast as gold leaves the country, and as long as paper money does just as well as gold, gold shipments cannot be expected to have any direct effect on the market.

Perhaps it is rather academic nowadays to write about gold as if it were a matter of considerable moment. Certainly we have not the least intention or desire to suggest that we ought to hoard our gold. We have always held that the purpose of a gold reserve is its usefulness at a time of need through being used boldly and freely, and we hope that this policy will be maintained. But as we are convinced that the two things most necessary for our financial salvation are the reduction of consumption and the reduction of inflation, and that these two desirable objects are closely connected, we therefore think it is a pity that the Government, which has set a lamentably bad example in extravagance and which has done much to defeat the efforts of those who have worked on the side of private saving, should always, by continually pouring out a stream of paper money, defeat the effect of the exports of gold. These exports ought to reduce the basis of credit, and so reduce the fabric of credit, and so reduce unnecessary production and trading (of which there is still far too much in certain lines), and so reduce inflation and reduce prices. As it is inflation continues and the prices of necessaries are a cruel hardship to those with small incomes, while the costliness of the war is directly increased by this inflationist policy.

BANK OF ENGLAND.

THIS week's statement shows further considerable loss in both specie and reserve, but owing to the heavy Government disbursements, which have reduced the public deposits in four weeks from over £116 millions to below £40 millions, the market is richer. The Bank lost fully £3½ millions in gold for export, making the eighth consecutive week in which gold has been taken out of the Bank, and during which period the total bullion has fallen from nearly £68½ millions to below £56¼ millions. This loss of gold for export was offset by a return of £394,139 from the country, against which there is an increase of £221,515 in the note circulation. Besides the £2,876,376 taken from the reserve the market also lost £2,053,000 through a further reduction in the "other securities," which, by the way, have in eight weeks run down from £145,230,000 to £96,565,000. Against this big demand upon the market's resources the bankers' balances were more than replenished by the Government disbursements, to which we have referred.

POSITION IN NEW YORK.

THE return of the New York Banks and Trust companies, published on Saturday last, shows an addition of £26,912,000 to the loans and a corresponding increase of £29,616,000 in the deposits, which now stand at £643,674,000, or nearly £200,000,000 higher than they were at the beginning of the year. At the same time there has been a further addition of £5,384,000 to the reserve, and the total at £144,728,000 compares with under £92,500,000 early in the year. The surplus reserve is slightly higher. Money has remained plentiful at 1¾ to 2%, but exchange has been weak, cable transfers having

dropped to 4.62, from which there has been a recovery to 4.65½.

The following rates of exchange are current in New York:—

New York on—			Rate Oct. 28	Par as usually quoted	Discount %
London	...	sight	$4 6⅝	4 86½ dollars for £1	1⅝
,,	...	cables	$4 64		
,,	...	60 days	$4 60		
Amsterdam	...	sight	41 c.	40¼ cents for 1 guilder	Prem. 2
Berlin	...	sight	81 c.	95 cents for 4 marks	14 2
Paris	...	sight	5 95 fr.	5.18 francs for $1	14 9
Mexico	...	Mex. silver $	37½c. U.S.	50c. U.S. for 1 Mex. $	24 5

Rates for prime commercial paper and for call loans in New York are as follows:—

Oct. 28, 1915 ...	Prime paper ...	3-3½%	Call money ...	2%
Oct. 29, 1914 ...	,, ,, ...	6-6½%	,, ,, ...	6-6½%

POSITION IN INDIA.

On Wednesday last the reduced amount of 40 lacs of drafts upon India was offered by the India Council, but the demand was exceedingly heavy. Against the total applications for 207 lacs the previous week the applications amounted to nearly 345 lacs. The allotment was made at an advance of $\frac{1}{32}d.$, both bills and deferred telegraphic transfers being sold at 1s. $4\frac{1}{32}d.$, and applicants at this rate only got 71% of the amount applied for. Consequent upon this good demand, the Council decided to increase the amount next week to 50 lacs. Periodical returns of the Indian Currency Department show that the contraction in the note circulation is still proceeding. Early in August the outstanding notes exceeded 69½ crores. The last return, made up to October 22, shows a further reduction of 21 lacs, the total having been reduced to about 62½ crores. The week's reduction in the note circulation was accompanied by a loss of 22 lacs in the silver reserve, which has fallen to 3,650 lacs, a total which compares with 4,015 lacs early in August, while the gold in India is 1 lac higher at 592 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 5 per cent. (June 2, '15) Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, October 27, are:—

	Bills.				Telegraphic Transfers

The following Special Sales have since been made:—

	Rs.	At
Transfers on Calcutta (Immediate)	1,35,000	1/4 1/32

From **April 1** to **October 26** inclusive the Council granted remittances for **Rs. 6,97,95,268**, realising **£4,65,2,637**. Up to **October 27** of last financial year the total Bills and Transfers sold was **Rs. 5,98,74,881**, realising **£3,994,576**. The total sales for the week ended **October 26** amounted to **Rs. 5,99,000**, realising **£400,305**. The amount to be offered for tender next Wednesday will be increased to **50** lacs.

SILVER.

The drop of $\frac{3}{16}d.$ in the London price of silver last week was of short duration. This week offerings from abroad have been on a smaller scale, whilst there has been continued mintage buying on both Continental and home account. The recovery has also been assisted by good monsoon advices from India. The price rose to 24⅛$d.$, the highest quotation since March 16 last, and has dropped back $\frac{1}{16}d.$ According to the views expressed by bullion brokers there is a disposition to look forward to a very steady Silver market in the future.

Stock Exchange.

In the last week of ability to effect conversion of Consols, &c., and old War Loan into the new War Loan there has been a spasm of active dealings, and a rise in price for a time occurred to a fair extent in War Loan, with reaction late in the week from the best. At one time there was a very sharp demand for War Loan *cum* rights for the purpose of effecting a conversion of old issues, and the difference in price between War Loan *cum* and *ex* rights was for a period as high as ½, or even a shade more.

In the House of Commons on Wednesday night, Mr. McKenna, replying to numerous questions upon the subject, gave definite assurance that companies where special conditions operate—as, for instance, mining and rubber undertakings—will be fairly treated under the Excess Profits Tax, and all factors considered. Mr. McKenna pointed out that while in the Bill 6% is given "as the normal rate anybody is entitled to," it is also provided in clause 38 for an increase of the percentage standard. Referring to rubber companies, the Chancellor said: "If I were a Referee I should look upon it as ridiculous to suggest that 6% is an appropriate rate of interest, seeing that these companies do not pay under five or six years."

He made similar observations regarding mining companies, but mentioned that these special cases are for the Official Referees to decide; and "the Referees are a business body, well qualified to judge of these points, and will take a fair view of what the allowance ought to be."

Though complaints are rife at the absence of business in the general stock markets, an examination of the general features presented during the week leads to the conclusion that the strength shown denotes an undercurrent of resolution on the part of investors to hold on. In the first place, at current prices they are indisposed to effect realisations, and the occasional signs of a disposition to buy is only checked by the influence of war news. At the moment the ugly situation in the Balkans is a great deterrent to any idea of expansion of investments, but, on the other hand, persons who should have the ability to see ahead have no hesitation in pronouncing for the eventual success of the *Entente* Allies against the Central Powers. Briefly, their grounds are that the Central Powers are bleeding to death, while the *Entente* Powers possess the ability to steadily augment their forces. It is not the time to anticipate events, but were the circumstances less acute undoubtedly a good many people who share that view would come into evidence in making purchases on the stock markets.

Towards the end of the week a slight set-back was noticeable in New York after the continued spell of advancing prices—in some cases rapidly advancing—that has continued for some while. In the circumstances London has not been able to share either directly or through arbitrage the activity so noticeable on the New York Stock Exchange.

The only means of securing relief from **Income Tax and Super Tax** and of providing for **Death Duties** explained in a special brochure

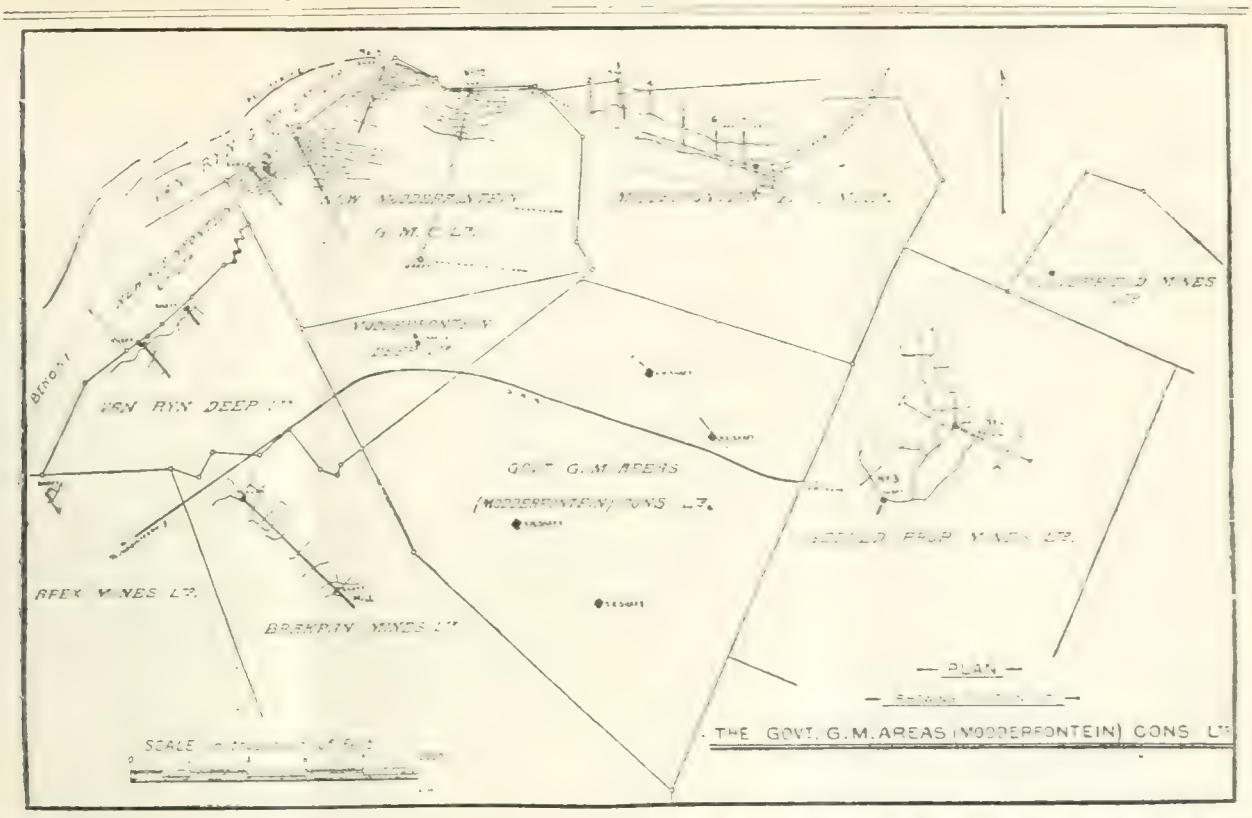
Mining Topics.

Much the same characteristics [illegible] week in the Mining department [illegible] In general the tone [illegible] particularly as to [illegible] and Eastern shares especially. Among the prominent features [illegible] tion re Modder Deep [illegible] quoted [illegible] which [illegible] We [illegible] tion and prospects of the Modder Deep in THE STATIST of October 16, and this week refer in subsequent remarks to the recent history and outlook of the City Deep Company. We also this week deal with the Government Areas Company, whose shares have recently come into prominence through the progress [illegible] quoted [illegible]

Diamond descriptions retain their strength and have made a further advance, more particularly as to De Beers [illegible] Preferred to 13¾.

Among base metal shares, copper shares have continued in demand, a feature being a further rise in Utahs to 17¾, and Anacondas [illegible] the region of 17, ex the 8½ dividend of the quarter. Rio Tinto Proprietary shares have been steadily inquired for and have appreciated to about 44s.



The Mexican group of gold mines have further improved, but have slightly receded from the best. The assertions made [illegible] differences have been made in respect of taxes on Mexican mining properties appear to be correct, but it is explained by a correspondent of our contemporary, the New York *Engineering and Mining Journal* that the new taxation is neither onerous or inequitable. Formerly the annual tax on mining properties had been $3 per hectare (2½ acres). The Carranza decree raises this to an annual tax of $6 per hectare on a property not over 10 hectares; $7.50 per hectare on what exceeds 10 hectares and is less than 20; $9 per hectare on that from 20 to 50; and $12 per hectare on all above 50. But perhaps the market talk regarding heavier taxes was by some people confused with effect of the Mexican export duty on gold, or even our own Excess Profits Tax. It, of course, is possible that English-registered companies owning property in Mexico will come under this impost, and it will be peculiarly unfortunate if, after three or four years of acute discomfort, a return to prosperity through end of insurrectionary conflicts is handicapped in this way.

* * * We call attention to the advertisement that appears in these columns of publication of a Plan of the Rand gold mining properties. It is an authoritative one, being produced for the Transvaal Chamber of Mines, and its appearance is welcome.

GOVERNMENT AREAS.

In previous remarks this week, under the heading of "The Eastern Rand: A Retrospect," we call attention to the Government profit-sharing arrangement with lessees of ground under its control in the Modderfontein region. This was effected is February 1910, when a Company under the long-winded title of the Government Gold Mining Areas (Modderfontein) Consolidated, Limited, was formed to put up £1,400,000 of capital, all of which was to be raised in cash, for the purpose of leasing, developing, and equipping the area of 2,633 claims passed over to the Company for the period the ore in such area would last. There were no vendor shares. The whole of the £1,400,000 capital has been issued and is fully paid up. The amount of capital expenditure apparently will be about £500,000 more than was reckoned upon, the Company having come to the decision, with so large an area, to enlarge its plant to about double the initial idea. Even before it had arrived at the stage of crushing at rate of some 600,000 tons a year the Company had incurred floating debt, and the project of extension of plant points to a further expenditure before an annual output of, say, 1,100,000 tons per annum is attained. Some of the necessary expenditure may be taken from profit, and the next annual report will afford a clue as to finance policy.

A very hard bargain was driven by the Government in its profit-sharing arrangements with lessees of the Government Areas. A sliding scale for division of profits was agreed, and its meaning may be briefly summarised. In order to arrive at the respective proportions accruing to the Government and to the Company there is, first, a primary, and, secondly, a supertax based on the proportion of profit to the value of the gross yield of gold—"recovery value." The intricacies of all this are dealt with in our last [illegible] of "Mines and Miners" [illegible] pages 236-8, and are too lengthy to repeat here, but we may forthwith indicate what is the outcome of the sliding scale. Our interpretation of it is that it is more profitable to the Company to employ work a low-grade than a high-grade ore, as by such policy it has to pay the Government a smaller percentage of the profit made and prolongs the life of the mine. The Government policy may have been partly devised in order to insist upon economical management, but when the sliding scale is analysed it will be seen from the facts we give below that the proportions of profits work out disadvantageously to the Company. The terms

made are regarded as being a handicap to capitalists, and the Government has been unsuccessful in its invitations for further tenders to work properties upon like bases. But as at the moment we are dealing with the features of the property, and the Company's record of work done to the present time, we may defer further general remarks upon this subject and give below the figures to show how the Company's profit-sharing arrangements work out upon various bases.

On the assumption of 600,000 tons of ore, value 25*s.* per ton, being milled per annum, and *total* costs of 20*s.*, 17*s.* 6*d.* and 15*s.* per ton respectively, the Government's and Company's approximate shares of the yearly profit, on the basis of the sliding scale, works out as follows:—

Tons Milled	Yield per Ton	Total Costs per Ton	Profit per Ton	Total Profit	Government's Share		Company's Share	
					Per Cent.	£	Per Cent.	£
600,000	25/0	20/0	5/0	150,000	21¼	32,250	78¾	117,750
600,000	25/0	17/6	7/6	225,000	33	74,250	67	140,570
600,000	25/0	15/0	10/0	300,000	47	141,000	53	159,000

Supposing a yield of 30*s.* per ton were obtained at a cost of 15*s.* per ton the approximate respective shares would be as follows:—

Profit per Ton	Total Profit	Government's Share		Company's Share	
		Per Cent.	£	Per Cent.	£
15/0	450,000	61¼	275,625	38¾	174,375

The percentages the Government gets on recovery value and on profit are indicated below:—

Bases on 600,000 *Tons Milled.*

	Recovery Value, 25/0 per Ton			Recovery Value 30/0 per Ton
	£	£	£	£
Recovery value ...	750,000	750,000	750,000	900,000
Costs per ton ...	(20/0) 600,000	(17/6) 525,000	(15/0) 450,000	(15/0) 450,000
Gross profit	150,000	225,000	300,000	450,000
To Government.				
Primary and Super tax based on Recovery Value	4·5%	9·9%	18·8%	30·625%
Actual percentage of profit	21¼%	33%	47%	61¼%

It is to be noted that the above calculations are based on gross data, and take no account of allowances in respect of "exhaustion of capital," &c. The Company being a lessee pays no Government tax.

All the area over which the Company has mining rights is reef bearing. It comprises 2,633 claims, surrounded by Modderfontein Deep, Modderfontein B, Geduld, and Brakpan areas. Although in the Far Eastern Rand a great number of the companies formed took steps to test their properties by means of boreholes, no tests of such character were applied in the case of the Government Areas and the cost of boring was saved. At the first blush it looks a very bold course to take up area without making any tests; but this Company had the benefit of the work done by other companies all round it, both in respect of bores and actual shafts, which proved continuity of reef north, south, east, and west. Hence directly cash resources were raised the Company, after its formation in February 1910, commenced straightway to open up the property by shafts. There are four shafts, all of large pattern. They are respectively termed the north-west and north-east, south-west and south-east, and are at pretty well equal distances from one another, like the four corners of a square. Simultaneously with shaft sinking there was a good deal of preparation of surface plant for power and hoisting, provision of electrical and water supply, tramways, &c. The policy of working one reduction plant in the vicinity of the south-eastern shaft was decided on, and all work was formulated on thought-out principles.

The intersection of the reef in the different shafts occurred at the depths and dates mentioned in the following particulars:—

Shaft	Reef Intersected	
	Date	Depth Ft.
North-West	June 1912	2,295
North-East	August ,,	2,275
South-East	May 1913	1,580
South-West	Oct. ,,	2,508

It would look as if in the immediate region of the property the inclination of the reef is a flat one. Though there may be wavy forms—what are technically termed syncline and anticline—in the Far East Rand, the undulations in the Government Areas ground will probably range between 8 and 10 degrees.

The reef as to thickness, as to various developments reported, has varied considerably from between 19 and 34 inches in the region of the northern to 24 and 43 inches in the southern shafts. The developments reported in respect of underground work, after intersection of reef by the shafts and for the years 1913 and 1914 are set out below:—

Developments.

Year	Total Feet	Payable				
		%	Feet	Width Inches	Value	Sectional Inches
1913 ...	8,484	46·7	3,964	26·5	48·6	1,275
1914 ...	18,340	71·2	13,060	33·6	47·7	1,599

Although part of the 100 stamps and 10 tube mills were put into commission in the middle of October 1914, the quantity used in the period to the end of the year was less than 100,000 tons, and does not affect the fact that the pay-ore reserves at December 31, 1914, were officially estimated at 2,451,581 stoping tons of an assay value of 24*s.* 7*d.* per ton, based on a stoping width of 60 inches; but as the Consulting Engineer reduces the stoping tons to milling tons by assuming 15% sorting, this would give a net 2,088,443 milling tons, in respect of which a recovery value—not an assay value, be it noted—of about 25*s.* per ton is expected. The quarterly report mentions that the ore reserves at June 30, 1915, were 2,256,349 milling tons. Respecting the nature of the ore reserves, the Consulting Engineer reports that "the good results were not confined to any one section of the mine, but were in all four sections." Apropos of the mill, it is to be noted that the utmost celerity was effected in its erection, the construction work occupying only about a year.

The policy of extension of plant—promptly ordered—was decided upon in April last, and the capacity of the mill will be about doubled, or, as we take it, raised to a rate of 1,100,000 tons a year, by about the end of this year or the beginning of 1916. It may here be convenient to give a record of the results from the start of operations to September 30 this year in the form we usually adopt in announcing the results of Rand companies.

Government Areas.—Capital £1,400,000, in £1 shares. At December 31, 1914, floating debt about £240,000. 100 stamps, 10 tube mills. Plant ordered to be doubled, or total raised to rate of near 1,100,000 tons a year. The returns include sundry revenue.

Year ends	Tons Milled	Sorting %	Revenue Amt £	Revenue Per ton	Expenses Amt £	Expenses Per ton	Profit Amt £	Profit Per ton	Price end of Period
Dec. 31 1914.	Stps								
Oct. 16 to Dec. 31 1915.	90	97.7	17½	8,995	16/6	105,433	21/6	23,468*	5/0* —
Mar. qr	97	[illegible]	14¼	45,132	24/8	122,691	17/6	22,441	3/2 21/6
June qr	100	[illegible]	15	17,285	24/0	132,145	18/7	38,850	5/5 1⅝
July	10	45,0	14¾	6[illegible],736	28/9	47,109	21/1	17,567	7/8 1⅝
Aug.	10	[illegible]	14¼	6[illegible],467	27/3	47,527	20/0	17,280	7/5 25/0
Sept.	—	[illegible]	—	16,755	27/2	51,549	21/2	15,216	6/0 28/9

* Loss.

Apparently it is the policy of the Company to keep down the grade, and one can quite understand the sudden large percentage decrease of August in the proportion of ore sorted out on surface; also, one can understand there is no striving to attain as small a stoping width as possible, for with a very flat reef it is necessary to stope to a much greater width than in the case where the inclination is steep.

We have given an indication above of what may be expected roughly as the outcome of operating [illegible] year on different bases, and the most economical basis appears to be that of a recovery value of 25*s.* and 17*s.* 6*d.* costs. If one applies this formula to a quantity increased to 1,100,000 tons the approximate outcome may be set out as under:—

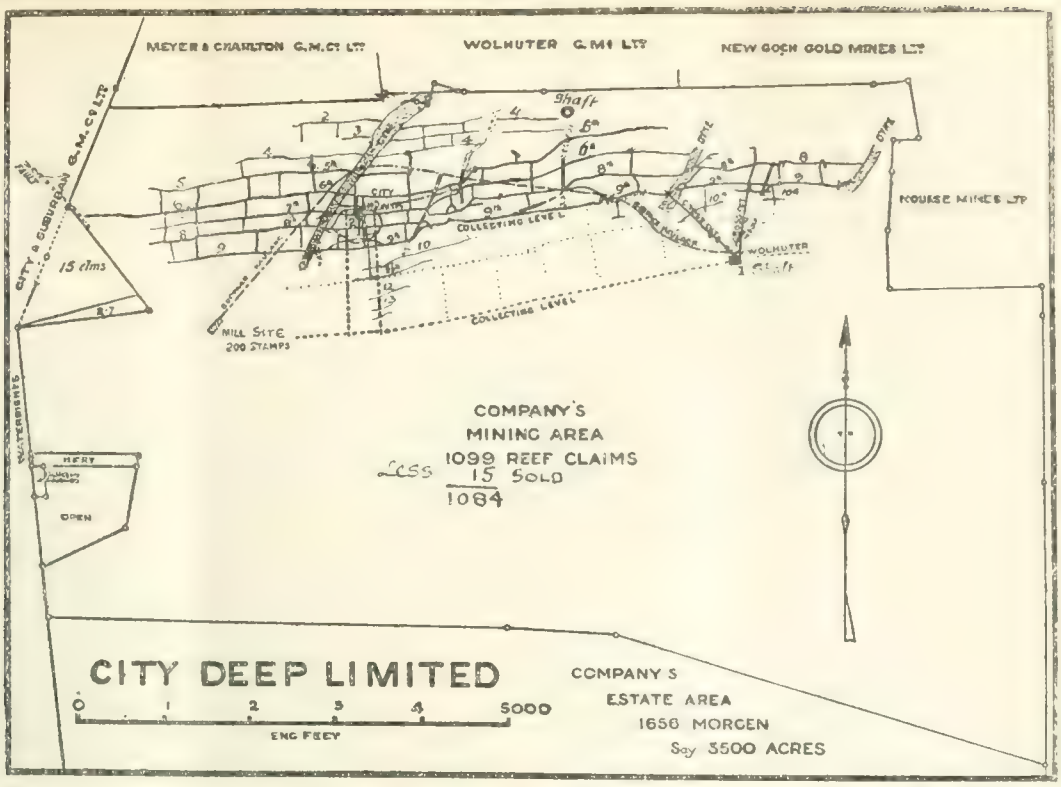
1,[illegible] ... 25/- recovery ... 17/6 costs per ton

	(1) £		(2) £	
Recovery value	1,[illegible],000		1,[illegible],000	
Costs	9[illegible],500		962,500	
Gross profit	41[illegible],500		687,500	
Amount and proportion of profit to go to Government	136,125	33%	*237,078	40%
Remaining for [illegible] property	276,375	67%	350,422	51%

* Premium tax 1[illegible]% of profit, plus supertax of 17½% of primary tax, viz. £286,875 [illegible]

Should the issued capital of the Company in the time of such result stand at, say, £1,900,000, on No. 1 result a dividend of 12½% would call for £237,500 and leave a surplus, and on No. 2 result a dividend of 17½% would absorb £332,500 and leave a surplus. It remains to be seen, however, how accumulating floating debt will be dealt with. There may be Debentures created, some profit may be used for capital purposes, or there may be a further share issue.

For some time to come what will be the dividend is a moot point, and what will be the policy adopted is also subject to modification. We cannot, with any satisfaction, arrive at what is the actual present value of the share, adopting our usual procedure of allowing 10% for income and excess of dividend to be applied to a sinking fund by investment at 5% for redemption of the purchase price at the end of the life.



The life consideration from the speculative investor's point of view is not a very great bugbear. With a flat reef and a stoping width adopted of 5 feet we calculate that, were all the area to contain payable reef, some 22,910 mill tons per claim may be averaged. Then, as to the area, it has only been proved to a small extent, and it would be unwise to class the Government Areas in the same category as the Modder Deep, for which we made a 10% allowance for faults, or with so proved a property as the Modderfontein, where we allowed 20% for dyke intrusions, &c. Therefore, it appears to be a conservative course to make an allowance of 25% in respect of the Government Areas. Deducting 25% for faults, &c., from the 2,633 claims, we may assume 2,000 clean claims as reef-bearing, and such a number of claims at 22,910 mill tons per claim would give the total area, on a consumption of 1,100,000 tons annually, a life of about 45 years.

CITY DEEP.

In The Statist of May 8 this year we dealt at some length with the position and prospects of the City Deep mine. Progress was then being made, and certainly has been more than maintained since, and looks like continuing still further. It may be recalled the Company had a very uncomfortable experience during the early days, after its arrival at the stage of production. Mistakes had been made, but in the interval since these have largely been rectified. In respect of the lay-out of the mine there was a great mistake made, with a long period of attendant defective ventilation. The difficulties in connection with ventilation have since been removed by the completion of the circular shaft. More stope faces have been opened, and shaft and drive difficulties have been remedied. An increase has been gradually going on in the number of stamps used out of its total 200-stamp mill initially erected, and in recent months the number in operation has averaged 154.

In 1913 the Company distributed dividends aggregating 17½% on its capital of £1,250,000. In 1914 it increased its dividend to 23¾%, this being provided after the setting aside of approximately £70,000 for capital purposes out of profit. This year, compared with 1914, there has been a further increase in the quantity of ore dealt with, accompanied by a substantial increase in the profit per ton. This double tide of increase in tonnage and gain in profit per ton is very gratifying. Should, as is expected, the profit of the remaining three months of 1915 approximate the average of the months of August and September, we estimate that after making allowance for phthisis, Government and extra war tax, that the net profit for 1915 will be in the region of £560,000, which is about £60,000 more than what would provide 40% on the capital. In June last the Company declared a dividend of 13¾%, so that, whether or not profits be divided up to the hilt in respect of the full year, a further increase in the dividend—and a substantial one at that—is to be looked for when the December announcement is made. A contrast of the actual results of 1914 with those we estimate for 1915 is set out below. In the circumstances one can quite understand the strength of the shares, at the present time the quotation being near to 3¼ for the £1 share.

We would refer our readers to the remarks in The Statist of May 8 on the question of life. We then set out that on an annual consumption of 700,000 tons the life of the mine would be about 39 years.

All things considered the shares are at an attractive figure.

Year to December 31,	Estimate, 1915		Actual, 1914	
	£	Per Ton	£	Per Ton
Revenue ...	(676,700 tons) 1,310,000	38/8	(605,500 tons) 965,740	38 2
Expenses	680,000	20/1	566,933	22 5
Mine profit	630,000	18/7	398,777	15 9
Sundry revenue	20,000		22,727	
	650,000		421,504	
Appropriations				
Claim annuity £6,560		£6,560		
Phthisis, &c. 15,000		13,787		
Taxes 65,000		39,744		
	86,560		60,091	
	563,440		361,413	
Dividend ... ... *(=40%)	500,000	(23¾%)	296,875	
Surplus	63,440		64,538	

* June 1915 dividend of 1½%, absorbing £281,250.

The above shows the estimated appropriation of unappropriated profit balances brought in or carried forward.

City Deep.—Capital £1,250,000, in £1 shares. 200 stamps and tube-mill accessories, to have a capacity of about 800,000 tons per annum when in full operation.

Year to Dec. 31	Stps.	Tons Milled	Sorting %	Revenue Amt £	Revenue Per ton	Expenses Amt. £	Expenses Per ton	Profit Amt. £	Profit Per ton	Price end of Period

* "The yield recently has been higher than that called for by the ore reserves."

Dividends—1914, June, 11¼; Dec., 12½ per cent.
1915, June, 13¾ per cent.

The accompanying map shows the shape of the property, position of the shafts, drives, &c., and is especially noticeable from its revealing how small a part of the Company's large area has been opened upon.

FAR EASTERN RAND.

A RETROSPECT.

The last two or three years the success attending companies formed to deal with Eastern Rand ground has attracted much attention to that region. Hence a brief historical retrospect will be of interest.

It may be recalled that discovery of gold deposit was made in Rand region as far back as nearly 30 years ago. About 1887-88 there were formed the Kleinfontein, Modderfontein, and the Van Ryn companies to acquire mining rights in the region, and all three by 1889, 1890 and 1892, respectively, attained in a small way the stage of production with toy plant worked in a desultory and inefficient manner. After the Welgedacht the next important area to be taken up as a gold proposition and formulated as a company was the Geduld, incorporated in 1899. As an outcome of preliminary testing by the Geduld, three years later, in a similar manner as had been done by the Van Ryn, two subsidiary working companies were formulated, which were furnished with capital resources for shaft sinking, their areas being subsequently—in 1906—transferred back to the parent company. Bore sinking was initiated by the Company prior to the War, and the nature of reef intersected in the deep-level region first attacked caused excitement; all operations, however, were stopped during the period of war. About 1902 another effort was made to develop properties, and company promoters were active. Besides the incorporation in 1902 of the Geduld's subsidiaries, there was the fusion and provision of capital for opening up two areas that now belong to the Van Ryn Deep. The Geduld Deep also came on the scene. Early in 1903 the Cloverfield and the Brakpan came into market prominence.

After a year or two of real work reports of shafts meeting the reef gave renewed interest to the position. The Geduld intersected reef in December 1905 in its No. 2 shaft, and in January 1906 in its No. 3 or western shaft. The Brakpan made but a poor discovery on the intersection of reef in the north shaft in October 1907, but met good reef in its south shaft in July 1908. The fused Van Ryn Deep Company met reef in its western shaft in June 1909 and in its eastern shaft early in 1910. In The Statist of October 2 we dealt fully with the affairs of the Modderfontein B. and the recasting in 1908 of area that in 1895 had been the property of what were termed the Modderfontein Extension Company and others. Part of such property in the middle nineties was prospected by a variety of small shafts, but showings were of discomforting character and the property was allowed to remain fallow. The recast Company—Modderfontein B—acquired additional area in 1908 and capital was provided for effecting developments with a view to the erection of plant. Phenomenal success attended its efforts and production was commenced in October 1911.

This activity all round caused a growth of interest

in the region, and as there were very large areas—a sort of no man's land—under Government control, the Government formulated a project for the letting on lease of some ground in Modderfontein area, the lease being based on a sliding scale as to division of profits between a lessee company formed for providing working capital and the Government as owners of a huge area lying immediately to the south of the Modderfontein B and the New Modderfontein properties. This was in 1910 and there was much heart-burning over the project. After preliminary ideas had been subjected to discussion the Messrs. Barnato put in a tender which was accepted, and in 1910 there was registered the "Government Gold Mining Areas (Modderfontein) Consolidated, Limited," which has ominously been dubbed a sesquipedalian title.

Parenthetically we may here say that in 1910 and 1912 the Government unsuccessfully invited tenders, in a similar way to that of the Modderfontein Government Area, in respect of ground in farm Brakpan, and also contemplated leasing another extension of ground to south of Geduld.

The bargain come to between the Government and the Barnatos in 1910 has been regarded as so stringent and illiberal that to the present the Government's efforts to effect further leases have been unsuccessful. We trust, however, there will be an early modification of the Government's attitude, and that the region will come to be worked, with profit for lessees and Government properly adjusted. All the more does some action appear to be called for as, since the display of unwillingness in 1910 to formulate terms, further important developments have occurred, in especial the intersection of reef in 1912 at the Modder Deep, at the Modder circular shaft, as well as developments in the area the Government leased in 1910. Then consideration has to be given to the features of celerity of development and plant erection of Far Eastern mines in quite recent years, and the proofs being afforded of the value of this important area.

Nigel.—In view of disappointing results of crushing it was suggested by the Manager that the battery should be shut down temporarily while development was extended. The Board, in consultation with their technical advisers, have decided this policy is at present unnecessary, but a cable from the head office states:—

Technical advisers report that the issue depends entirely upon continuance and payability of the large shoot lately exposed in the 11th drive east of No. 3 shaft. Recommend pushing by double shift 14th and 22nd drives to prove shoot in depth. If shoot continues in drives mentioned, should be well into it in about two months, when position of the mine will be reconsidered in light of information gained. Meantime milling will be continued on reduced tonnage of highest grade ore. Expenses will be reduced for the purpose of trying to make both ends meet. Board approves operations being carried on accordingly.

TOMBOY GOLD MINES.

The year ended June 30, 1915, was quite a good one for this Colorado gold-mining Company. A record quantity of ore was milled, probably owing to the coming into operation of a new cyanide plant in December 1914, and as a slightly higher gold yield per ton a little more than offset a small rise in working costs, the working profit earned rose to £77,482, or 10*s.* 8*d.* per ton, in the year to June 30, 1915, in comparison with £72,443 in the previous twelve months. However, sundry tramway and other receipts in the past year brought in only £5,148, against £11,982, so that the working profit, plus sundry receipts, for the year ended June 30, 1915, totalled £82,630, against £84,425 in the previous year. If the amount of the earnings had been the determining factor, therefore, the Company could have maintained its dividend of 20%; but necessity to provide a large sum for expenditure on plant caused the dividend distribution for the past year to be reduced to 15%, in comparison with 20% in the previous year and 17½% in 1912-13. However, the dividends being paid free of tax, the shareholders really received a distribution last year equivalent to about 17½% on their capital. The operating results of the past six years and the manner in which the profits have been distributed will be seen from the following table, which also shows the very satisfactory increase that has occurred in the quantity of the ore reserves in sight:—

	Years ended June 30					
	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£
Value of yield	210,558	196,528	213,188	183,959	160,107	167,288
Working expenses ...	133,076	124,085	117,002	103,173	104,416	108,938
Working profit	77,482	72,443	96,186	80,786	55,691	58,350

* Including £82,193, the purchase price of the new Montana property acquired and written off.

The net profit, after payment of office expenses and income tax, for the past year was £71,705, equal to 23% on the Company's capital. The 15% dividends actually paid for the year absorbed £46,500, leaving a balance of £25,205. Expenditure on capital account, largely for the new cyanide plant which came into operation in December 1914, amounted to £31,486, so that, in addition to the balance profit of £25,205, a further sum of £6,281 had to be provided by reducing the Company's net liquid resources at end June 1915 to £10,021, as against £14,034 at the end of the previous year, and the value of stores to £10,115, as against £12,383. It is necessary to note this weakening of the financial position, as it will have to be made good in the current year. Indeed, it is the expressed intention of the directors to build up a strong financial position. However, capital expenditure during the current year should be considerably less than provided for last year, so that on the whole a larger proportion of the profit earned should be available for dividends. In this connection it seems natural, now that the income tax has reached such a high level, that the directors will decide to pay future distributions less such tax. If this were done the rate of dividend would appear at its proper level when contrasted with the distributions of other similar companies.

As regards the underground position of the mines, the General Manager reports that the development indications during the year ended June 30, 1915, while not so exceptionally good as in the previous year, were of encouraging character, and the ore reserves have been considerably added to, the tonnage in sight at June 30, 1915, representing about four years' supply for the mill. No estimate of value of the ore reserves is given, and it is, of course, impossible to predict how much ore beyond that already developed will be found in the future. The Company, however, has paid dividends for the past 15 years without intermission, and the ore reserves are now larger than for many years past.

Moreover, as announced at the meeting this week, the Company has been able for the small sum of £15,000 to acquire the White Cloud group of claims

adjoining the Montana-Bushwacker claims, and protecting for 4,000 feet the continuation of the strike of the Argentine vein, which has, for the 15,000 feet length already opened up, yielded such good results to the Company. The acquisition of the new property was described at the meeting as "a wonderful bargain for the Company," and if it opens up as well as the Montana-Bushwacker claims acquired in 1911 have so far done, the future prosperity of the Tomboy Company will be greatly enhanced. Development of the new property is not expected to entail any capital expenditure beyond the purchase price of £15,000, owing to its situation relative to the present mine workings and surface plant.

The price of the £1 shares is 21s., and in view of the fact that the profit-earned in the past year was much more than sufficient to pay the 15% distribution, they do not appear to be overvalued, having regard to the four years' ore supply in sight.

MEXICAN MINES.—II.

(Continued from October 23.)

CAMP BIRD—SANTA GERTRUDIS.

THE Camp Bird mine, in California, has for some years been considered to be nearing the point of exhaustion, but nevertheless it continues to yield a very considerable yearly profit. In addition the Camp Bird Company has a very large holding in the Santa Gertrudis silver-gold—mostly silver—mine, situated in the district of Pachuca, Mexico. The Santa Gertrudis Company's capital is £1,500,000 in £1 shares, of which the Camp Bird holds 1,122,328 shares, or about 75%. This and other shareholdings of the Camp Bird figured in the Company's last balance sheet at June 30, 1914, as follows:—

	£
Shares in The Santa Gertrudis Company, Ltd.	1,122,328
Shares in [illegible] Mines	1,000
Shares in [illegible] Company, Ltd.	2,250

£42,999 17s. [illegible]	47,216
	1,175,792
Less Share Reserve Account	270,608
	905,184

For the year to June 30, 1914, the Camp Bird received no revenue from its Santa Gertrudis holding, and did not, therefore, pay any dividend on its own Ordinary capital. The report for the year to June 30, 1915, is expected to be issued in a few weeks' time, but meantime an idea of the Company's earnings can be obtained from the quarterly reports. In the following table we contrast the revenue, profits, and dividends of the last four financial years:—

	Years to June 30.			
	1915*	1914	1913	1912

Surplus liquid assets		64,251	125,614	16,965

* According to Quarterly Reports.

The Camp Bird's capital is £1,750,051, as to £650,000 in 7% Cumulative Preference £1 shares, and £1,100,051 in £1 Ordinary shares. The Preference shares are entitled beyond their 7% Cumulative dividend to rank *pari passu* with the Ordinary after the latter have received 20% annual dividend. On account of the year ended June 30, 1915, a dividend of 1s. per share on the Ordinary has just been declared. This is termed an interim declaration. The future of the Company depends to a very large extent upon the earnings and prospects of the Santa Gertrudis mine, to which we refer below.

SANTA GERTRUDIS.

The revenue and profits of the Santa Gertrudis Company in the past three years have heavily declined, as also has the estimated profit-value of the ore reserves. This will be seen from the following:—

Santa Gertrudis (Capital, £1,500,000).

Year to June 30	Tons Treated	Revenue Per Ton	Total Working Costs Per Ton	Net Working Profit— £	Net Working Profit— Per Ton	Ore Reserves— Tons	Ore Reserves— Est. Profit Value Per Ton
1912 ...	269,850*	[illegible]	20/4	275,498	20/6	1,137,000	26/10
1913 ...	266,554	47/11	28/2	260,859	19/9	1,047,000	18/8
1914 ...	293,836	31/2	18/4†	189,002†	12/10	1,194,000	14/2
1915† ...	211,669	23/7	15/3	87,880	8/4	—	—

* In the last [illegible] months.

† According to [illegible] quarterly report.

Dividends: 1911-12, 15%; 1912-13, 15%; 1913-14, nil; October, 5% (interim).

In addition to the effect on the operations on the disturbed state of the country, it has to be borne in mind that about 85% of the product is silver, and only 15% gold. The price of silver fluctuates considerably, and in recent years has shown a substantial decline, being now quoted in London at 2*s.* 1$\frac{3}{4}$*d.* per fine oz. in comparison with about 2*s.* 6*d.* at the end of 1912. This falling-off in the price of the principal product must have contributed very considerably to the decline shown in the revenue per ton, and consequently in the profit. The ore-reserve estimated profit-values shown above, on the other hand, are based on a price for silver of 2*s.* 3*d.* per fine oz. The falling-off in this case is, therefore, due to the poorer quality of the ore developed. As regards developments, recent indications have been distinctly disappointing. In January a new discovery was reported at the 16th level, where 260 feet length of ore assayed 76*s.* 5*d.* over a width of 7$\frac{1}{2}$ feet. On the 14th level above, driving results were not nearly so good, the payable length of the vein being reported as only 118 feet, assaying 40*s.* per ton for a width of 5.8 feet. At the 18th level nothing of importance has been discovered, and it is believed that the limit of the new shoot is "only a relatively short distance below the 16th level."

LONDON, SATURDAY, OCTOBER 30, 1915.

FINANCING THE WAR.

This week the final instalment on the War Loan has been paid, and the Government and the country have now to consider ways and means of financing the War until the end of next March. Of course, all the money that will be needed will be found, and the duty of the Government is merely to devise the means of raising the sum required in the most advantageous manner. Everyone must admit that our enormous war expenses have so far been financed without the least difficulty. It is true they have caused our imports to show immense expansions and our exports to decline, and that in consequence the foreign exchanges have moved against us; but even this difficulty has been met by the new loan from the United States of £50,000,000, by the export of a substantial amount of gold and by the sale of a considerable quantity of American securities. How the Government proposes to raise the balance of the money required to meet the War expenditures to the end of next March has not yet been disclosed, but presumably well-considered plans will be placed before Parliament and the nation in the not distant future, and there is no doubt that the nation will provide the Government with all the money it requires. Exactly how much the expenditure will be up to the end of March cannot, of course, be calculated. Mr. McKenna's recent statement to Parliament provided for an expenditure for the whole fiscal year of £1,589,706,000, of which £770,526,000 was spent from April 1 to October 23. This leaves an estimated expenditure for the rest of the year of £819,180,000, or at the rate of £5,120,000 per day. It is probable, however, that the actual expenditure may not reach this vast sum.

Already more strenuous efforts have been made to prevent waste in military expenditure. We can scarcely hope that all waste will be prevented, but measures have now been taken to obviate a great deal of the waste that was found to have occurred, and therefore we are not without hope that the expenditures will not reach £5,000,000 per day. However, as matters now stand, the sum to be provided by the end of March amounts to the great total of £819,000,000. Against this figure has to be placed the estimated revenue. The revenue so far received has been £120,569,000, and if the estimates are not exceeded, the revenue yet to be collected before the end of the fiscal year will be £184,445,000. But it is more than probable that the sum realised from taxation will substantially exceed the estimates. Should it not do so, the deficiency still to be provided will reach £634,735,000. The combined effect of an excess of revenue over the estimates and of economies in the estimated expenditure may be to bring the deficiency still to be provided for to well below £600,000,000. Towards this sum has to be placed the last instalment on the War Loan, paid this week. Exactly how much this has amounted to is as yet unknown, but measured by the previous instalments it should be about £30,000,000, bringing the total sum raised by the last Loan to about £600,000,000. Beyond the last instalment on the 4½% War Loan there is the £50,000,000 borrowed in the United States, and a cash balance of £18,000,000. Roughly, therefore, the cash in sight at the end of last week, over and above the revenue, was about £100,000,000. If this amount be deducted from the deficiency the balance remaining to be found is reduced to £537,000,000 if the estimates both of revenue and expenditure are realised, and of somewhat under £500,000,000 if the revenue exceeds the estimates, and there is economy in expenditure. For the purpose of showing how the great sum of money already expended has been raised, we set out below the revenue and expenditure in the period from April 1 to October 23 :—

Actual Receipts and Payments April 1 to October 23, 1915.

	£
Revenue	120,569,000
Expenditure	770,526,000
Deficiency	649,957,000
Repayment to the Bank of England	164,427,000
Repayment of Exchequer Bonds	16,395,000
Repayment of other debt	9,715,000
Total deficiency	836,494,000
War Loan, 1925–28	35,798,000
Exchequer Bonds	242,000
War Loan, 1925–45	571,000,000
Treasury Bills	145,988,000
Ways and Means	19,850,000
Sum borrowed	772,878,000
Paid from cash balance	63,616,000

Further, to indicate how much money has still to be provided, we set out the estimated revenue and expenditure for the remainder of the year:—

Estimated Receipts and Payments October 24, 1915, to March 31, 1916.

	£
Estimated Revenue	184,445,000
Estimated Expenditure	819,180,000
Deficiency	634,735,000
War Loan, say	30,000,000
American Loan	50,000,000
Cash balance	18,000,000
Cash in hand and in sight	98,000,000
Deficiency to be provided	537,000,000

Presumably the Treasury will not appeal to the public for another loan at present, but will obtain all the money needed by the sale to bankers and others of Treasury bills and short-dated obligations. Apparently the amount of money which bankers have at their disposal has been accumulating for some time past, as the Government has used a substantial part of the money raised for the purpose of redeeming debt incurred in anticipation of the loan. Consequently bankers should have no difficulty in providing the Government with another £200,000,000 or £300,000,000 in order to provide for the War expenditures until the savings of the public have accumulated sufficiently to enable another loan to be offered to investors. The amount of Treasury bills outstanding has been reduced since July 10 from £251,813,000 to £223,138,000. To meet the expenditures until the beginning of January the Treasury will need to borrow in one way or another about £250,000,000, and no difficulty is likely to be experienced in raising this money having regard to the very large supply of money in the short-loan market.

The advance in the rates of interest upon Treasury bills to 4⅜% for three months' bills, to 4½% for six months' bills and to 5% for nine and twelve months' maturities will certainly attract very large applications. There is, of course, no finer security in the world than a British Government Treasury bill to be bought to give a return of nearly 5%.

The Anglo-French 5-Year 5% External Loan for

$500,000,000, which will provide the British Government with £45,000,000 of money, is payable as to 50% on October 29 and the balance on December 3. The influence of this loan upon the American exchange will be felt not merely as to the part accruing to this country, but as to the entire loan. Moreover, recently a great sum of gold has been sent to the United States, and it is evident that a very large amount of the indebtedness of Europe to the United States has been already liquidated or is in course of liquidation. The exports of the United States at the present time are, however, enormous, and if they are maintained at anything like the current rate it is obvious that the exchange provided will not last for more than a few weeks. It is reported that in the week to October 23 the exports of the United States were valued at no less than $98,777,000, and the imports were no more than $28,167,000; there was thus an excess of exports over imports in a single week of $70,610,000. Possibly this was exceptional, and in future the exports may not be as great as this; nevertheless, at this time of year exports are normally very large, and inasmuch as at the present time the usual wheat, cotton, and other exports are supplemented by heavy shipments of goods, it is obvious that the trade balance is likely to be unusually heavy. Still, taking everything into account, the money borrowed in America and the gold sent thither, as well as loans made by America to various foreign countries, should take care of the exchange situation into the New Year. That it will entirely take care of the foreign exchanges can scarcely be hoped for, as in consequence of our great purchases from all countries and the vastness of our adverse trade balance other countries than the United States are in a position to draw gold from London. Indeed, no permanent improvement in the exchanges can be expected to take place until the nation becomes much more economical, and there is a substantial curtailment of imports and expansion of exports.

THE WAR.

This is not a time to indulge in carping criticism, as too many of our daily contemporaries are doing. On the contrary, it is for us now to show that we have the resources to put down our enemies, and that we are resolved to use them to the utmost. It is always to be borne in mind that in numbers, in wealth, and in every kind of resource we are immensely superior to the enemy, and that we have merely to organise to trample him underfoot. The country must not be disheartened because there is said to be a split in our own Cabinet, and because the Cabinet of M. Viviani has resigned. As soon as M. Delcassé retired from the latter it was evident that either a resignation or a complete reconstruction was necessary, and, therefore, we need not be alarmed. Above all, we must not allow ourselves to be induced by the enemy to believe that the French are disheartened, or have lost a tittle of their resolution to see the War through to a successful termination. As a matter of fact, the actual condition of things is by no means unfavourable to us. In France and Belgium the enemy are pinned to their trenches. If they were to attempt to retire they know that they would be pursued vigorously, and that they could not hope to regain their own country without terrible losses. In France and Belgium, at all events, we have the initiative. For months we have been gaining ground, very slowly, it is true, but still we have been gaining ground. The very hope of gaining possession of Paris or even of Calais has been given up, and the most the Germans can still boast of is, that we have not been able up to the present to drive them out of the positions in which they entrenched themselves in the first couple of months of the War. We have, then, only to pursue the policy we have followed so far to maintain the initiative, to press the enemy on every possible occasion, and to make sure thereby that he shall not be in a position to withdraw a single man to increase his forces elsewhere.

In the Eastern field of operations some of our readers may think that the advantage is entirely with the enemy. If so, we disagree. It is perfectly true that the Russians were not as well prepared for the War as was generally supposed; that for want of munitions they had to avoid fighting a single decisive battle; and that they everywhere retreated rather than give the enemy an opportunity to break up one of their armies. The result is that the enemy has possession of Russian Poland, and that it is threatening Riga. But it has not succeeded in breaking a single Russian Army, and the Russians now are in a much more favourable position than they have been hitherto, while munitions are being poured in upon them from Japan, the United States, and this country. The winter, moreover, is now setting in, and everybody knows what a Russian winter is. It will be impossible for the Germans to carry out any really successful measures on a great scale, whereas, so soon as the Russians are provided with abundance of munitions they will be better able in their own country to adopt vigorous and decisive measures. In fact, it seems as clear as anything can be that the Germans have failed in their policy in Russia just as completely as they have failed in their policy in France and Belgium, and that they have bribed Bulgaria to join them in the hope that they may be able to relieve Constantinople and to transfer the real theatre of operations from both France and Russia to Turkish Asia and Egypt. It is a very ambitious idea, but if we act with common judgment we shall defeat them. Germany and Austria will suffer terribly during the coming winter. And Turkey has neither the men nor the resources to carry on a great war. Our policy ought to be to do what we can to save Serbia. But on no account to be fooled into weakening our forces either in France or in Belgium, while we should supply Russia as rapidly as we can with munitions so that she may be able to resume the offensive on her own territory. If we do that it is to be recollected that we have all the advantages on our side; that time is fighting for us; and that a little judgment will bring us the means to end the War successfully. Bulgaria has been seduced from her true interests. But neither Greece nor Roumania have proved false to the real welfare of the Balkans; and if we act with common prudence and common judgment there is no reason why England, France, Italy, and Russia should not be able to place such an army in the Balkans as will convince both Greece and Roumania that their true interest is to join the Entente Allies.

THE BALKAN OUTLOOK.

It is very greatly to be feared that our gallant Serbian Ally will be crushed before sufficient assistance can reach her. Many of our contemporaries are abusing the Government because it did not take action long ago. But we fail to see the utility of crying over spilt milk. So far as our own Government alone is concerned it can, we feel sure, put forward a much stronger case in its own defence than the Marquis of Lansdowne made in the House of Lords on Tuesday. We have to recollect that we are acting with a great number of Allies, and that it is of the essence of an Alliance that the several Allied Governments should keep in the closest possible communication one with another, and that none of them should do anything that would be disapproved of by the others. An alliance is impossible unless all work honestly together. Now we are utterly ignorant of the views of the several Allied Governments. We have no means of judging whether the assistance to Serbia was deemed to be necessary, was discussed, or was even suggested. Therefore, as the business concerns a great number of Governments it seems to us unreasonable, as well as unpatriotic, to single out one Government for

criticism. Furthermore, we do not know what negotiations have gone on between the Governments of the *Entente* Powers and the Balkan Governments. That negotiations have gone on is notorious. That it has been known for a very considerable time that the bankers of Berlin made a considerable loan to the Bulgarian Government is also notorious. And we presume no Government was so innocent as to believe that Germany parted with her money without consideration. Furthermore, we know that Germany has been most anxious to keep up free communication with Turkey, and that, in fact, she has put strong pressure upon Roumania to allow her that communication. Lastly, we know that M. Venezelos was ready to act a considerable time ago; that he was practically dismissed from office by the King; that the Greek people returned him to power by a decisive majority; and yet that he has been driven from power once more by the King. Can there be any serious dispute, then, but that there has been constant negotiations going on between the *Entente* Powers and the Balkan Powers on the one hand, and between the Central European Powers and the Balkan Powers on the other hand. But, as we know no more—as we know, in fact, no details, but only the broad fact that negotiations have been going on—it is impossible for us to criticise any of the parties with advantage either to ourselves or to the future proceedings of the *Entente* Powers. We have before us now a series of unquestionable facts. One is that Bulgaria has declared war against Serbia, and is acting with great promptitude and great skill. The second is that Greece has refused to fulfil her treaty obligations towards Serbia. She bound herself to assist Serbia if the latter were attacked by Bulgaria. Serbia has been attacked by Bulgaria, and Greece refuses to fulfil her obligations. Thirdly, we know that Roumania is in a very difficult position; that she is threatened with destruction by the two Central European Powers if she does not obey their behests; and, on the other hand, that she is offered considerable advantages if she helps Serbia, and so joins the *Entente* Powers. The facts being such what is the use of criticising the past until, at all events, we know what has been done in the past, and can form some definite and just opinion as to the conduct of all the parties?

On another point there is a good deal of unjust, and we will add absurd, criticism of our Government. We do not pretend to believe that our Government is exactly the ideal Government we should like to see in power for the purpose of carrying on a great war. But we believe the Government consists of able and honest men, and we think, therefore, that people ought to support it until they have real grounds for believing that a change of administration would be desirable. For ourselves we believe in the thorough wisdom of President Lincoln's famous saying, that "it is ill swapping horses while crossing a stream." To us it seems the duty of all citizens to support the Government, and we think it especially so in the case of Serbia. Serbia was made the excuse for a wicked aggression by the two Central European Powers, and Serbia has shown great heroism and fine qualities of every kind during the past fifteen months. Moreover, while we admit that this concerted attack upon Serbia affects all the *Entente* Powers, we submit that it affects the British Empire more than any other of the Allies. For it is to be recollected that if the Balkans were to be domineered over by the Central European Powers, Constantinople relieved, and a free field opened to an Austro-German expedition, with the assistance of the Turks and the Balkan peoples, we should have to bear the brunt of the following struggle. The road to India lies through the Mediterranean, the Suez Canal, and the Persian Gulf. We are bound at whatsoever cost to defend our communications with India. And if it were possible that the Central European Powers could relieve Constantinople, and made an attempt upon Egypt, the brunt of the conflict would have to be borne by ourselves. It seems to us, then, not to be a time for either criticising or grumbling. It is a time for bracing ourselves up to a most vigorous effort, and for making up our minds that Prussian militarism must be destroyed, let the ultimate consequences be what they may. While we say this we do not mean to imply in the least that we have any doubts respecting the results of the present rash move of the Austro-Germans. As we have observed on more than one occasion in the past, whoever controls the strategy of the Central European Powers has lost his head and has no real plan of any kind. He began with the assumption that he could overrun France and occupy Paris in five or six weeks, and that then he would have time enough to deal with his other opponents. He not only has not succeeded in occupying Paris, but he has given up even the attempt to occupy it or to occupy Calais either; and yard by yard he is being pushed back, slowly we admit, but still successively. Then he persuaded himself that Russia being, according to her own confession, without sufficient munitions, he had an excellent opportunity to crush Russia. His success was greater than was generally expected, because it turned out that while Russia had been reorganising her Army since the close of the Manchurian War she had not provided herself with sufficient munitions of war, and, put the blame on whomsoever you like, the Dardanelles were closed against her, and she could neither sell her exports nor receive what she desired to be her imports. Being unprovided with proper munitions she felt that she was not in a position to fight a decisive battle. She has wisely, therefore, withdrawn from Russian Poland. The result is that Germany now sees herself faced with all the dangers of a Russian winter, and without the means of compelling a decisive action. For a third time she has changed her plans, and she thinks that as she has failed both against France and against Russia she may be more successful against the British Empire. Once relieve Constantinople, call out millions of ardent Turks, and it may be possible, with the aid of the Bagdad Railway, not only to seize the Suez Canal but to endanger the British hold upon India.

Such being the actual situation, it is perfectly plain that it is our duty to take off the gloves and to go in seriously for the struggle that is before us. We and our Allies have complete control of the Mediterranean. Are we going to allow Germany to use her German puppets on Balkan thrones to prolong the fighting, with all its mortality, and to increase our debt simply out of chivalrous courtesy? Is it not, on the contrary, our plain duty to declare that he who is not with us is against us; and to make sure, therefore, that we shall not only relieve Serbia while there is yet time, but that we shall be able to march upon Buda-Pesth and Vienna before many weeks are over? The taking of Constantinople will be of minor importance if we can assure ourselves of the assistance of Greece and Roumania, depose Ferdinand of Bulgaria, and split up once for all the Hapsburg Monarchy. When that is done we shall be able to take Constantinople and to dispose of those fabled millions of Turks who are so eager to plunder India. And we shall also have time to deal with Germany, who, when everything is said, is the arch-enemy. The splitting up of the Dual Monarchy means in reality nothing more than rewarding Serbia for her present great sacrifices by the acquisition of Bosnia and Herzegovina and other mainly Serbian territory; the increase of Roumania by about three millions of Roumans; and the granting to the Magyars and the Germans of Austria independence. It must be different in the case of Germany. Without provocation of any kind—in a spirit of mere lust of territory and lust of money—she has brought this calamitous war upon Europe; and she ought to be made to pay in such a manner that centuries will pass before she risks incurring the same dangers.

INDIA.

It will surprise nobody to find that the imports of gold into India during the past year show a falling off compared with former years. Yet the imports were larger than under the circumstances might have been expected. It will be recollected that just previous to the War there had been numerous failures of native banks throughout India, which shook the confidence of the native community, especially in the Bombay Presidency, and disorganised business. Furthermore, there had been a somewhat wild speculation in cotton piece goods. Partly, perhaps, because of those failures and the disorganisation of trade generally there was not the consumption that had been looked for. Moreover, the sudden outbreak of war closed against India the German and the Austrian markets, which were large importers of Indian goods, both cotton and seeds. In addition to this the failure of the wheat crop in Australia disorganised the trade with that Continent; and whereas a considerable import of sovereigns was expected from Australia there was, in fact, a considerable export. Lastly, it will be recollected that the outbreak of war was quite unexpected, and that it disorganised the trade of every country in the world. Naturally India shared in the general apprehensions. And the antics of the *Emden*, by spreading fears of destruction by German commerce destroyers, increased the general malaise. In the last place it may be pointed out that the exchanges everywhere were thrown into disorder, and that India suffered like other countries; while, of course, the immense amount of tonnage that had to be chartered by the British Government lessened materially the means of exportation from India. Still, the imports of sovereigns amounted to a very considerable sum, the total being 682 lakhs of rupees. From all this it seems to be evident that India has made up her mind that she shall have a gold currency, and that as soon as matters settle down the demand for gold will spring up again. Mr. Howard, the Controller of Currency, in his report for the year 1914-15, does not enter into the same fulness of detail that made the reports of several of his predecessors highly valuable. Perhaps he supposes that in the presence of war it is impossible to form any very definite opinion as to the general drift of affairs. If so, we think he is mistaken, for the influence of a great war is a very severe test, and if the demand for gold currency continues in spite of war it is a matter which deserves the most careful consideration, and should be fully discussed for the information both of India and of the United Kingdom. For example, we ought to know to what extent in the year under review gold was used in the different districts of India by actual buyers and sellers; whether it was used only by the comparatively wealthy; or whether the general body of agriculturists asked for gold in their operations. It will be recollected that the British Government bought up the greater part of the wheat of India early this year, and the Government may have been able to buy more freely without paying gold than private purchasers. But in any case the course of the various markets in the presence of a great war is of the very highest interest, and would be especially instructive just now. In the next report we trust that he will give us a fuller account and enter into more minute details. One thing is very satisfactory, that India has upon the whole borne the strain of the War with singular success, and therefore proves to us that she is making steady progress economically.

THE TREASURY AND THE LATEST BANK FUSION PROJECT.

BARCLAYS AND UNITED COUNTIES BANK.

Some time ago a fusion scheme was projected for the amalgamation of Barclay and Company, Limited, and the United Counties Bank, Limited, but objection was taken by the Treasury, probably on the grounds of a contemplated issue of extra shares for cash. A modification put forward to the effect that only an exchange of shares would be made and further issue of shares postponed was in turn refused assent to. To overcome this bar the announcement has this week been made that a provisional working agreement between the two banks has been arranged to take effect as from January 1, 1915. Under the new scheme, while the banks remain separate institutions, measures are concerted for the provision of dividends *pro rata* as heretofore, and in case of surplus profits as from January 1, 1916, except by mutual consent, such surplus profits are to be retained in reserve till the initial fusion arrangement becomes recognised as permissible.

Barclays' issued capital comprises £4 per share paid up in respect of "B" 450,000 £16 shares, and 450,000 "A" £4 shares are fully paid.

The United Counties issued capital is 298,332 £20 shares with £4 per share paid. The aggregate issued capitals are:—

Barclays	£3,600,000
United Counties	£1,193,328

Those who are directly interested in the companies will be aware of the detail from the official notices sent out, but as detail only affects shareholders we refrain here from commenting thereon.

In consequence of this Treasury action, however, the interchange of shares is prevented. It is true that the shares of Barclays have an official quotation on the London Stock Exchange, while those of the United Counties Bank are only quoted in provincial Stock Exchange official lists. In the existing forms of shares of separate companies, whether quoted on the London or a provincial Exchange, the marketing of the shares is not interfered with. Had permission been given for new Barclay shares to be issued in exchange for shares of the United Counties, doubtless official Stock Exchange sanction would have been given to the quotation of uniform shares in Official Lists both of the London and the provincial Stock Exchanges. Business in the new shares received by United Counties shareholders would mainly have been transacted on the local Stock Exchanges, while the bulk of business would be transacted through the London Stock Exchange by those persons who are residents in the region of the Metropolis. What the public cannot understand about the Treasury action is why a business arrangement of such character should be taken objection to and forbidden. Had there been only a projected new creation of capital and invitations to subscribe thereto, one could perhaps understand the action of the Treasury. But a proposition for a mere exchange of shares, based on the relative market valuations of each, was rejected.

In The Statist of May 22, page 482, we called attention to some remarkable Treasury decisions, and gave three instances. The present instance is yet another. Those who are interested in the matter will perceive a resemblance between the present bank case and that of the third instance we gave in The Statist of May 22, to which we refer our readers.

May we invite the Treasury Committee, presided over by Lord St. Aldwyn, to reconsider its decision? As the Committee will have seen from the Press of every political and non-political shade, its decision has evoked a great deal of comment and criticism, and it is evident that some misunderstanding must have arisen to induce the Committee to veto not merely the issue of new capital by an amalgamated

bank, but even to veto the amalgamation itself. If there is one thing needed at the present time it is an abundance of banking money. A subscription of new capital for banks is entirely different to a subscription of new capital for any other enterprise, as the capital is not locked up, and is available for any purpose for which the country may need it. With regard to a new issue of capital, the Committee is fully within its reference if it considers that an increase in bank capital at the present moment is undesirable. It is, of course, entitled to refuse the application, although we should have thought that trained bankers would realise that an addition to banking capital at the present time was not without advantage to the country. But as to an amalgamation by exchange of shares only with no issue of new capital for cash, surely the Committee has gone beyond its reference. As everyone knows, the Committee was set up for the purpose of regulating new issues of capital in order that no unnecessary capital expenditure should be made during the War, and in order, through the economy thus effected, that the Government should be able to raise all the loans it needed for the War. But the proposed amalgamation did not in any way reduce the amount of money available for the War, and would not have done so even if new capital had been created, as the new capital could and doubtless would have been placed in War Loan or in Treasury bills. Of course, in the hurry of a time such as this a great many decisions are reached which cannot be rectified, but this is not the situation with regard to the proposed amalgamation. Apparently a blunder has been committed by someone in the hurry of the moment which the Committee will doubtless rectify now that the matter has been so fully discussed and opinion in the City is so unanimous that an error has been committed.

THE RHODESIAN MINE DISPUTE.

Mr. Justice Eve, in the Chancery Division of the Royal Courts of Justice, has this week commenced the hearing of the action, Amalgamated Properties of Rhodesia (1913), Ltd., *v.* the Globe and Phœnix Gold Mining Company, Limited, and the case is expected to last for a considerable period, possibly two or three weeks. The decision will be an important one when made, and the matter is very technical. In The Statist of October 16 we gave some explanations of the mining law in Rhodesia, and showed by diagrams how the existence of an ore body that outcrops the property of A. can, without the consent of the owner of the adjoining property belonging to C., mine and extract ore from below the surface of C.'s property. A great deal, however, in this important case depends upon the intent and nature of an agreement that appears to have been entered into between the two companies, the Globe and Phœnix having acquired by purchase the John Bull claims—the deep-level ground adjoining the Globe and Phœnix, or what is the equivalent of C.'s property. Under the surface of the John Bull claims there exists continuity, on the dip, of the Discovery reef that has been followed heretofore by the Globe and Phœnix, under Rhodesian law, without any question as to right to mine the ore.

BANCA COMMERCIALE ITALIANA.

Our attention is called to a statement in the Banking Section of last week concerning the foreign connections of the Banca Commerciale Italiana, and we are asked by the manager to state that there are no members of German or Austrian nationality on the Board of Directors.

Financial Notes.

It is stated that a unanimous decision that the Carranza faction should be recognised as the *de facto* Government of Mexico was reached at a Conference of Latin-American envoys held at Washington on the 9th inst. Two previous Conferences between the United States Secretary of State and the Diplomatic Representatives of Argentina, Brazil, Chili, Bolivia, Uruguay, and Guatamela were held, and at the second it was agreed that the Provisional Government in Mexico, "with the material and moral capacity necessary to protect the lives and property of nationals and foreigners," should be recognised. The delegates investigated the Mexican situation, and unanimously agreed that the Carranzista party possessed the essentials for recognition. After the adjournment of the Conference on the 9th inst., Mr. Secretary Lansing announced that "the conferees, after careful consideration of the facts, have found that the Carranzista party is the only party possessing the essentials for recognition as the *de facto* Government of Mexico, and they have so reported to their respective Governments."

It is further stated that Mr. Lansing made a report to President Wilson as to the conclusions reached at the Conference, and that the President had given formal sanction to the plan for the recognition of Carranza. It is said that the Diplomatic representatives in Washington of several South American Governments have received instructions to take the same action as the United States. Neither the time when recognition will be extended nor the form in which it will be made has been announced.

General Carranza is reported to have said, when the news was communicated to him, that the news put an end to all efforts of our enemies to bring about foreign intervention. They will continue, no doubt, their intrigues. But recognition of the Constitutionalist Government naturally will rob them of the fruit of their efforts. When peace is absolutely restored, and tranquillity really established throughout the republic, amnesty will be granted to all these

persons, but not now. To permit them to return at this time would be to endure their machinations within the republic. The immediate effect will be a great moral strengthening of the cause of Constitutionalism, and a corresponding disheartening of opposing factions. General Villa is reported to have said that "the decision reached by the Pan-American conferees means that the American nations recognise the triumph of the revolution begun and led by President Madero and continued by Carranza and Villa. This fact is a source of satisfaction to all who have contributed their efforts in the struggle against 'cientifico' rule."

According to a New York contemporary, there is a temporary substitution of the American dollar for pounds sterling as a basis of credit transactions between the two countries. "It is now proposed that London banks guarantee their customers for definite amounts with American banks, and that exporters draw their drafts on these banks in dollars. The bills run for 90 days, and the London banks would have that length of time in which to settle their obligations, or, if necessary, to purchase gold for shipment. It is believed that under such an arrangement there would be in the American banks from 250 million dollars to 300 million dollars of bills awaiting maturity at all times, so that the exchange market would be relieved of this amount." Sir Edward Holden is represented to have objected, firstly, that the plan would transfer the risks of exchange from the exporter in the United States to the importer in Great Britain; and, secondly, that such a plan might drain England of too much of her store of gold. It is added that the suggestion will be laid before the London joint-stock bankers without delay.

Mr. J. P. Morgan is reported to have said in regard to the safety of the Anglo-French loan: "The taxation revenues of Great Britian and France are, roughly, 2,000 million dollars and 1,000 million dollars respectively. This issue constitutes the only external obligation of these countries. It is the first charge on those nations. A country's external debt must be paid, even if it is necessary to sacrifice internal obligations. These countries cannot fail to pay their external debt because they may need to come to us again. The interest charge is only 25 million dollars a year. But it is absurd to talk about the earning power of a great Government. As to the price. . . . After two weeks of discussion we told them that we could supply them with 500 million dollars, taking 5% bonds at 96, to be sold publicly at 98. They understood that sentiment would not sell the bonds, but that they must meet market conditions. No Government bond since the Civil War in this country has equalled this, except the 10 millions sterling issue by France in 1871. . . . This investment will return nearly 5½%."

In a speech in Indianapolis, the Secretary of the Treasury, Mr. McAdoo, outlined a plan for a new shipping bill. He desires the creation of a Shipping Board, with power "to organise a corporation or corporations, and to subscribe to the capital thereof in whole or in part." The Board should have authority to vote the stock belonging to the United States for the election of directors. Mr. McAdoo suggested that Congress should appropriate and put into the hands of the Board a fund of 50 million dollars. He wound up by saying "We are paying to foreign steamship lines more than 300 million dollars per year, when, by having our own ships, we could pay them for this service, build up a merchant marine which will profit our people in time of peace, and serve our country in time of war."

ILLINOIS CENTRAL RAILROAD.

The year to June last was not a period of prosperity for the Illinois Central, which derives a large traffic from the Southern States, and was therefore affected by the adverse conditions surrounding growers of raw cotton. Following upon the outbreak of war an economic storm swept over the cotton-growing area of the United States, as the price of cotton fell so sharply that for a time it scarcely paid to gather the crop. Although not directly a large carrier of cotton —the quantity conveyed usually representing less than 1% of the tonnage handled—the fortunes of the Illinois Central are associated with the well-being of cotton planters and their employees, and as the low price of cotton greatly reduced the spending power of everyone engaged in the cotton industry, the earning of the Illinois Central were substantially reduced. A set-back in the building industry also occurred in the past year, and this, too, had an adverse effect upon its traffic, as ordinarily the Illinois Central conveys a large amount of lumber from Tennessee and Louisiana. But fortunately the traffic of the road is highly diversified and the Company is not dependent upon any one class of business, and the prosperity of general farming helped to neutralise the effect on its earnings of the depression in cotton.

Moreover, the inability of Great Britain to supply Central and South American countries with as much coal as usual gave a great deal of business to the United States and stimulated the demand for coal

† Deficit.

throughout the country. Hence, in spite of the depression in general industry, the coal traffic of the Illinois Central was somewhat increased. Thus the prosperity of general farming and of coal mining helped the Company to meet the adverse effect on its earnings of the severe depression in cotton and the slackness of industry.

It also possesses an important Western connection from Chicago to Omaha which gives it a large grain traffic, and in addition controls through stock ownership the Central of Georgia, and the Yazoo and Mississippi Valley Railways, two roads that are more or less dependent for their prosperity upon conditions in the cotton States. Thus, while the Company's Western lines enjoyed largely increased earnings and there was only an infinitesimal shrinkage in the receipts of the Northern lines, the decline in traffic on the Southern lines was considerable, and on balance gross revenue fell off $3,870,000, or nearly 6%, of which $2,660,000 occurred in freight and $1,075,000 in passenger receipts. On the other hand, operating expenses were reduced as much as $2,902,000, and the decline in net earnings amounted to $968,000. This was partially offset by the receipt of an additional $338,000 of miscellaneous income and the payment of $110,000 less taxes. Thus the net income available for interest charges was $523,000 lower than for 1913-14. The saving in interest effected by the retirement of Short Term notes was more than neutralised by interest payments upon new bonds issued during the year, and on balance, interest and other charges increased $757,000. Hence there was a decline of $1,280,000 in the net profit available for dividend, which last year amounted to $6,859,000, a sum equal to 6.28% upon the stock. This compares with 7.45% earned in 1913-14. After providing for the 5% dividend, there remained a surplus of about $1,400,000.

It will be seen from the Income Statement herewith that for 1914-15 the gross receipts declined practically to the level of those for 1910-11. This has been due not to any falling off in tonnage in the aggregate, but to a great shrinkage in high-class traffic bearing high freight rates. Indeed, since 1910-11 there has been a growth of over 10% in the quantity of freight traffic handled, as measured by the revenue ton mileage, but this has been accompanied by a drop in the average freight rate obtained, from .609c. in 1910-11 to .548c. in the past year. The heavy decline in high-class traffic last year, due to depression in general and to the crisis in cotton in particular, will be evident from the following contrast:—

The Company possesses a double-track road of very low grade from Chicago to the Gulf, which permits the traffic to be worked with great economy in heavily loaded trains; and in spite of its large mileage of branch lines, its average total train load in the past year was as high as 523 tons. Few undertakings have a higher reputation than the Illinois Central, which has paid dividends without intermission for the past fifty-three years. When one takes into account the enormous competition which has to be faced from water-carriage on the Mississippi River, and from the trunk lines to the Eastern seaboard, and the low level of the average freight rate obtained, it is obvious that to earn substantial profits it has been essential, first, to provide up-to-date machinery for handling the traffic efficiently, and, secondly, to display the utmost skill in carrying that traffic economically. And this policy is being continually carried out. Every endeavour is being made to eliminate curves, reduce gradients, build cut-offs, construct new terminal and siding facilities, and strengthen the bridges and track in order to permit of the running of heavier trains, and thus enable the increasing traffic to be handled with little or no increase in train mileage.

As each year passes the average power of the locomotives and the capacity of the freight cars are increased. With the object of enabling heavier trains to be hauled, the weight of rail on the track has been steadily raised, and whereas only six or seven years ago the standard rail in use weighed only 85 lb. per yard, it has now been raised to 90 lb. In the past year, according to data we have obtained from the President of the road, no less than 433 miles of track have been laid with 90-lb. rail, most of which has superseded lighter rails, and since 1908 as many as 1,300 miles have been laid with this heavy rail. The stronger condition of the track as indicated by the weight of rail is shown below:—

Weight of Rail on Main Track, Illinois Central Railroad.

Liberal provision has always been made out of income towards the upkeep of the road and equipment, and in view of the high standard to which the property has been raised it was possible without in any way impairing efficiency in some degree to offset the decline in gross receipts by a reduction of $1,000,000 in maintenance outlays. The cost of maintenance of way was, however, higher than in any previous year, apart from the abnormally large figure of 1913-14, and maintenance of road and equipment last year represented 36.66% of the gross receipts, against 34.96% in the previous year, and an average of 33.55% for the past decade. It should, of course, be remembered that the higher scale of wages and the rise in the cost of materials is responsible to some extent for the heavier outlays now being made. The

major portion of the reduced expenses of last year occurred in conducting transportation where a saving of as much as $1,900,000 was effected. The reduction in the volume of traffic in part accounted for this decrease, but important savings were occasioned by the introduction of superheater locomotives and the inauguration of special campaigns for fuel economy and for the curtailment of compensation charges. The ratio of conducting transportation was consequently reduced to 37.96%, against 38.62% for 1913-14 and as much as 42.66% for 1911-12. How expenses last year compared with those for former periods is shown in the following statements:—

We have referred above to the great efforts made to deal with traffic in an increasingly skilful manner, and to afford a striking example of the successful work accomplished in this direction we set out below a summary of the freight-train results since 1905. From this it will be evident that while there has been an expansion of over 35% in the volume of the freight traffic in the 10 years, the improved loading of the freight cars and the greater number of cars per train have resulted in an addition of 40% to the train load and about 3% fewer train miles have been run. In 1904-5 the revenue train load was not better than 319 tons. In the following year it was raised to 353¼ tons, and it remained at about that figure until 1911-12. The present management then took active steps to improve upon these results, and for 1912-13 the revenue load was raised to 407 tons, in 1913-14 to 417 tons, and for the past year to as much as 444½ tons.

With regard to the current year, the expectation is for earnings, both gross and net, to show improvement. For the three months to September a falling off of $605,000 in gross revenue was accompanied by a decline of $244,000 in net receipts. The results for September were, however, better than a year ago in gross and net alike, and for the remaining months not only will the line benefit from the improvement in industrial activity, but from the large shipments of grain to Europe and the greatly improved conditions now ruling in the Southern States.

More than one-half of the miscellaneous income is derived from investments in the Central of Georgia and the Yazoo and Mississippi Valley railways. In the current year one cannot look for any increasing income from the former, but in the case of the Yazoo line a better return than last year may reasonably be looked for. The Illinois Central owns the whole of the 2nd Mortgage Income Bonds of the Louisville, New Orleans and Texas Railway, a line which has been merged with the Yazoo. At the present time overdue interest on these bonds amounts to about $7,500,000, and the extent to which this is being paid off depends upon the course of the Yazoo's income account. In 1913-14 the Illinois Central received from this source $1,659,000, and in 1914-15 $1,429,000, and if the improvement in the Yazoo's results so far recorded this year continues as it is likely to do, the sum payable to the Illinois Central should be increased at least sufficiently to pay the somewhat higher interest charges of 1915-16. Therefore, speaking generally, any additional net earnings secured by the Illinois Central this year should be available for increasing the profit available for dividend.

The price of the stock is 115, at which the yield from the 5% dividend is £4 14*s.*%, a return that indicates the confidence of investors in the future of the security. The prices of, together with the yields, afforded by the Company's securities are shown below:—

U.S. STEEL CORPORATION.

The failure of the board of the Steel Corporation to resume dividends on the Common stock has caused disappointment to many people who had expected a dividend, but, although profits were large enough to permit dividends to be resumed, the directors have apparently considered it desirable to make good the inroads into the profit and loss surplus that took place in the less prosperous period between January 1914 and March 1915, and to postpone dividends for the present. The earnings and profits published this week indicate a return to prosperity. Not merely does activity now prevail in consequence of the huge orders for war materials of all kinds, but, in view of the greater volume of traffic and the necessity to provide facilities for the anticipated growth of business, the railroads of the country are again becoming purchasers of supplies on a liberal scale. Some idea of the great change that has come over the fortunes of the Steel Corporation is evident from the fact that, whereas at the beginning of this year only about one-third of the mill capacity was being utilised, at the present time the mills are being worked at full capacity, and orders on hand are so extensive that a great amount of new business has had to be refused, while in the case of many of the orders already placed

delivery cannot be guaranteed for any given time. Naturally, in consequence of the heavy demands for iron and steel products of all kinds, prices have already risen considerably above the quotations ruling only a few months ago, and there is every indication that the trend of prices will be in favour of the manufacturer. Having regard to these various factors, it will readily be understood how it comes about that whilst for January last the net earnings of the Steel Corporation totalled only $1,687,000 they have mounted up month by month, until for September they reached $13,800,000, with every prospect of unprecedented figures being touched ere many months elapse. The rapid recovery in the earnings of the Corporation is shown below:—

Monthly Net Earnings of U.S. Steel Corporation.

For the September quarter of 1915 net earnings amounted to $38,711,000, a larger sum than received for any three-monthly period since the corresponding quarter of 1913. In the June quarter of this year net earnings were just under $28,000,000, and for the December quarter of 1914 were less than $11,000,000. After providing for interest charges, sinking funds and depreciation allowances, and the dividend on the 7% Cumulative Preferred stock, there was a net profit of $18,037,000, equal to a distribution at the rate of 14¼% per annum for the quarter on the Common stock, against 6½% earned in the three months to June last. The undivided profit for the past six months has been $26,300,000, or about $3,000,000 more than sufficient to restore the profit and loss surplus to the level at which it stood prior to December 1913. The recovery that has taken place in the earnings and profits of the Corporation is shown herewith:—

* Equal to a quarterly dividend at the rate of 14¼% per annum.

The amount of unfilled orders on hand at the end of September had risen to 5,318,000 tons, against 4,908,000 tons a month before, and only 4,162,000 tons as recently as April 30 last. Further increase is anticipated to be shown at the end of this month, but these figures are only a partial indication of the busy times that are ahead for the Corporation. A good barometer of the change that has come over the iron and steel trades of late is the *Iron Age's* compilation of the production of pig iron, which shows that for September the output was 2,853,000 tons, against only 1,600,000 tons for January last. The daily rate of output in September was 95,085 tons, an unprecedentedly high figure, which compares with the previous highest of 92,369 tons recorded for February 1913.

For the remainder of this year the rate of earnings is likely to be higher than for September, and estimates of net earnings for the quarter, amounting to $50,000,000, have been put forward. But, even assuming the level of earnings is no higher than in September, the net earnings for the whole of 1915 will amount to about $120,000,000, and the profit available for the Common will be about $41,000,000, a sum equal to over 8% on the stock. Even if the rate of net earnings secured for September is not improved upon in the coming year, the net profit would be equal to about 17% on the stock. In view of such results, it may reasonably be expected that dividends will be resumed in the not distant future. How our estimated results for the year 1915 compare with those for the past four years on the assumption that net earnings for each of the last three months of this year are no better than those for September, will be evident from the appended statement:—

* Estimated.

The 7% Preferred stock is quoted about 125, at which the yield afforded is nearly 6%. A considerable advance in the price of the Common has accompanied the improvement in results, and, whereas early in the year the quotation was as low as 40, it is now about 91½.

BUENOS AYRES WESTERN RAILWAY

LAST week we gave a cursory survey of the results secured by the Buenos Ayres Western Railway Company in the twelve months to June last. But the position undoubtedly merits a more careful analysis than we were then able to give it, and we make no apology for returning to the subject, especially in the light of Sir Henry Bell's illuminating speech at the meeting of the Company this week. In his address to the shareholders Sir Henry explained that never before in its history had the Company been confronted with such climatic conditions as were experienced last season, and coming as it did on top of a particularly rainy season in 1913-14 caused great havoc to the crops and did enormous damage to the Company's property. When to these internal misfortunes are added what may be termed the external troubles created by the War, the really excellent showing made by the Company is matter for congratulation and reflects great credit on the management in having safely steered the Company through a crisis of such unexampled severity. At first sight the increase of £30,500 in working expenses, notwithstanding the loss of £6,500 in gross receipts, is disappointing, but when it is remembered that the whole of the renewal outlays connected with the floods, amounting to £122,825, have been charged off against revenue, the position becomes much more satisfactory. Eliminating these special outlays, the working expenses of the year are down £105,000 and the ratio to gross receipts comes out at only 54%, as against 58.82% in 1913-14. In some respects the Company has been fortunate, especially in the matter of coal, which actually cost £10,000 less than in the previous year. This is partly due to a reduction of 4.6% in train mileage, and partly to the Company's good fortune in having its bunkers full prior to the advance in prices. The high freights now ruling will tell heavily against the Company this year. When expenses were

reduced and where increased will be seen from the tables appended:—

Working Expenses, B.A. Western Railway.

Year to June 30	Maintenance of Way	Maintenance of Equipment	Cost of Transportation	General Charges	Miscellaneous	Total Expenses

* Including £122,825 extraordinary flood repairs.

Included in the above maintenance expenses is a sum of £88,792 in respect of special renewals. This is nearly £78,000 smaller than the allocations made in 1913-14, but if allowance is made for the charge of £122,825 for extraordinary flood repairs the total appropriation from revenue in respect of renewals is well above the average of recent years. This will be seen from the following statement:—

Renewal Outlays Charged to Expenses.

	1914–15	1913–14	1912–13	1911–12	1910–11

% of gross receipts	3·52%	5·80%	7·14%	2·01%	8·28%

The decreases in earnings were chiefly in passenger and general goods traffic. The passenger receipts were reduced by nearly £80,000, mainly on long-distance through booking. The General Manager in his report states that this heavy shrinkage is due to the abnormal conditions prevailing, and also, as has happened elsewhere, to the effects of electric-tramway competition. It is hoped, however, when the Company's electrification scheme is completed and conditions have settled down again, to more than recover the loss in this direction, whilst, with a quick and efficient service, it is anticipated that residents will be attracted to the suburbs and the traffic greatly increased. Parcels, luggage, &c., are naturally affected by the movement of passengers, and consequently show a somewhat heavy decline. The falling off in the coaching traffic in the past twelve months will be seen from the table appended:—

Coaching Traffic.

Year	Passengers	Receipts	Luggage, Parcels, &c.	Total Coaching Receipts
	No.	£	£	£
1914–15	8,830,106	615,023	266,671	881,694
1913–14	11,955,684	694,937	287,728	982,665
1912–13	11,462,842	744,222	276,235	1,020,457
1911–12	9,572,758	670,640	243,756	914,396
1910–11	9,072,163	653,673	242,650	896,323
1909–10	7,489,501	603,396	221,077	824,473
1908–09	6,573,425	559,238	191,786	751,024
1907–08	6,012,250	520,077	172,917	692,994
1906–07	4,873,701	470,497	157,374	627,871
1905–06	3,694,321	402,829	133,639	536,468

The total goods traffic increased about £51,000, but with the exception of wheat the movement of grain was smaller. Wheat was late in coming to maturity, and so escaped damage from the frosts at the beginning of November. The crop was, however, considerably short of what it would have been under normal climatic conditions. Maize, oats, and linseed all show decreases, and the traffic in general goods, which reflects pretty accurately the condition of trade in the Company's district, was smaller by nearly 70,000 tons and produced £31,000 less revenue. The live-stock business was particularly brisk, by reason of the large demand and favourable prices, and with the exception of sheep, which were adversely affected by the floods, substantial increases are shown under all heads. The nature of the freight traffic and the revenue derived therefrom in each of the last three years will be seen from the following:—

Freight Traffic, B.A. Western Railway.

The net result of the year's operations is a loss of profit amounting to £104,000, and the divisible surplus, apart from the balance brought forward, is about £153,000 short of the sum needed to pay the dividend of 5%. It will be appreciated, however, that but for the unfortunate and unprecedented damage by floods, the cost of which has been entirely met out of revenue, the 5% dividend would have been practically earned. Indeed, if we reckon as profit the betterment outlays charged to expenses, and ignore the extraordinary outlay of nearly £123,000 for repairing flood damage, the real profit-earning capacity of the Company last year was equal to nearly 6% on the share capital, certainly a satisfactory state of affairs having regard to the abnormal conditions prevailing. The transfer of £160,000 from reserve in order to equalise profits merely means that the Company is meeting the exceptional cost of flood repairs, &c., out of accumulated profits, a policy which in the circumstances is fully justified, the fund having been built up in good years for the express purpose of helping matters through in less prosperous times. The income statement of the Company for the last four years is set out beneath:—

Buenos Ayres Western Railway.

Moreover, the financial position of the undertaking is one of the strongest. According to the last balance-sheet the Company had cash in hand and at the bank in London £674,691, cash in hand and at the banks in Buenos Ayres £57,600, bills receivable £770,000, remittances in transit £70,000, and annuities accrued (which are as good as cash) £35,966—a total of £1,618,255—all liquid assets of the highest class; added to which the reserve and renewal funds still amount to the large total of £1,700,000. With such a strong position there is no doubt that the Company will get through the present trying period with comparative ease, and will, when the War is over and world conditions again become normal, regain its former position of being one of the most progressive and prosperous railways in the Republic.

To show the strong position of the Company prior to the set-back which commenced in 1913, we give herewith a retrospect of the main results of working since 1902-03:—

Buenos Ayres Western Railway.

Year to June 30	Miles Open	Gross Earnings	Expenses	Ratio	Net Earnings	Net Profit for Ordinary	Dividend
	£	£	£	%	£	£	%
1914-15	1,867	2,522,000	1,505,000	59·67	1,017,000	488,000	5

1902-03	732	1,180,000	562,000	47·63	618,000	495,000	7

With regard to the immediate future the prospects are likewise very encouraging. As already announced, the Argentine railway companies have recently increased their rates by 10% in order to recoup themselves for the constantly growing municipal and other charges at the same time that profits are declining, and consequently since October 1 the Buenos Ayres Western has been collecting these increased rates on some of its principal goods tariffs and on its long-distance first-class passenger fares. This will help it considerably in the current year, and will probably more than offset the increased price of coal which now has to be faced. The crops, too, are shaping well. The following cable from the General Manager was read at the meeting:—

"Recent rains have greatly improved prospects; wheat crop promises well, area estimated 15% more than last year, probable yield in south of Pampa said to have been affected somewhat by drought. Oats seriously affected by drought in Pampa, and only medium crop expected in province of Buenos Ayres, but this item is not of great importance to us. Ploughing and sowing for maize crop progressing favourably. Thus far no locusts have appeared in our districts. Rains have benefited conditions of camps and stock. Outlook as far as can be gauged at present satisfactory."

Since the beginning of July the earnings of the line have increased £124,000, which not only wipes out last year's losses in the same period, but raises the receipts to date to over £4,000 more than those of the corresponding period two years ago. To show the improvement in earnings so far this year and the meagre traffics with which comparison will continue to be made in the next few months, we give the following table:—

Course of Traffic Receipts since July 1, 1912.

Months	Crops Carried	1915-16	1914-15	1913-14	1912-13

12 months ...			2,549,000	2,529,000	2,906,000

The Debenture bonds of the Company are well-secured investments and may be safely commended to the most prudent. The 5% Mortgage bonds of the Western Railway of Buenos Ayres can be bought to yield over £5, allowing for redemption at par in 1925, whilst the 4% Debenture stock and 5% Terminable Debentures; the latter also redeemable in 1925, give yields of well over £5 per cent., and are consequently distinctly attractive investments. The two Preference issues are quite safe purchases, giving a relatively high return at the present time, and are worth attention. The price of the Ordinary stock has further risen to 83½, and on a 5% dividend basis the yield afforded is still as much as £6 3*s.* 5*d.* per cent. The capital of the undertaking is as follows:—

Name	Amount	Dividend	Price	Yield
	£		£	£ *s.* *d.*
Western Ry. of Buenos Ayres 5% Mort. bonds, redeemable 1925	1,000,000	5	100	5 1 4*
4% Debenture stock	7,872,203	4	76½	5 2 11
5% Terminable Debs. (1925) ...	1,000,000	5	100½	5 1 4*
5% Preference (£10)	300,000	5	84½	5 18 8
4½% Preference (£10)	2,552,340	4½	87½	5 12 2
Ordinary stock	17,347,660	5	83½	6 3 5
	30,072,203			

(*) Allowing for redemption at par in 1925.

FREDERICK HOTELS, LIMITED.

As would naturally be expected, this well-known group of hotels has not experienced a very prosperous time during the twelve months to June 30, 1915. In particular the War has had an adverse effect on the business of the London hotels, both on the ordinary hotel work and also on the number of banquets, receptions, dances, &c., at the Wharncliffe Rooms. Not only has the spending-power of the public generally, and perhaps especially hotel *habitués*, been largely diminished, but doubtless the various air raids have engendered a certain amount of nervousness both in the people who ordinarily live in London, and who are in the habit of spending liberally on hotel life, but also on visitors who ordinarily come up to town and patronise hotels, but who have in consequence of the raids preferred to take their patronage elsewhere. Only two of the hotels controlled by this Company are in London, and the other hotels have done good business. The Company also owns the Hotel Bristol at Beaulieu, and this was taken over by the French Government on the outbreak of war, so that no business has been possible there during the year under review. No payment has yet been received from the French Government, "although negotiations which have taken place lead the directors to believe that a substantial sum will be paid for the accommodation." In the circumstances, however, the directors have thought it best not to include in the accounts any sum in respect of this hotel.

The hotels belonging to the Company consist of the Great Central and the Russell in London, to the former of which are attached the Wharncliffe Rooms and the refreshment rooms of Marylebone Station, together with the Hôtel Majestic at Harrogate, the Royal Pavilion Hotel at Folkestone, the Hôtel Bur-

lington at Dover, the Sackville Hotel at Bexhill-on-Sea, the Hôtel Métropole at Whitby, and the Hôtel Bristol, Beaulieu. When the Company was formed only four hotels were in working order, the Hôtel Russell and the Hôtel Majestic not being completed, while the Sackville Hotel was in process of having extensions made. It was anticipated that when all the hotels were in working order the Ordinary shares would receive a substantial dividend. The whole of these shares were taken by the vendors in part payment of the purchase price. The dividend on the Preference shares was guaranteed by the vendors, and under their guarantee they had to provide over £36,000 for the purpose, while in addition the vendors bore the advertising expenses for the year ended June 30, 1902. The profits made by the Company, however, continued to be small in proportion to the capital, and the distribution policy was scarcely of a conservative enough character, so that finally it became necessary to write off a portion of the share capital, and 12*s.* 6*d.* per share was written off from both the Preferred Ordinary and the Deferred Ordinary shares, reducing each class to the denomination of 7*s.* 6*d.* Subsequently both classes of Ordinary shares were consolidated into one. It may be recalled that beyond the provision that is made for repairs and maintenance apparently no specific provision has yet been made for depreciation beyond writing down the capital, which enabled a sum of £343,750 to be writen off the assets.

The business done during the past year has amounted to £281,794, as compared with £337,922. After adding interest and transfer fees there is a total of £283,030, as compared with £339,549. Some slight saving has been effected in the expenditure, which has fallen from £270,044 to £229,106.

In the following table we set out the income and expenditure for each year since its formation:—

Income.

Year ended June 30	Business done	Interest	Transfer Fees	Total
	£	£	£	£
1915	281,794	1,226	10	283,030
1914	337,922	1,586	41	339,549

1909	110,176	106,137	21,266	6,398	243,977
1908	109,602	107,354	21,000	5,854	243,810
1907	121,900	112,409	24,309	8,669	267,287
1906	113,773	107,244	23,987	8,022	253,026
1905	114,934	107,553	28,339	5,306	256,132
1904	117,825	110,531	20,880	5,671	254,908
1903	121,417	112,601	16,307	5,041	255,366
1902	123,055	121,825		7,039	251,919
1901	127,995	134,615		4,157	266,767
1900	84,040	69,916		563	154,519

After providing for Debenture interest, which calls for £37,155, there is a balance of £16,769 only, as compared with £31,906. Consequently it is not possible to provide for the full Preferred dividend, and the Company is only able to pay a six months' dividend, covering the half-year to December 31, 1914. There then remains a balance of £3,019, which is added to the carry-forward, bringing it up to £22,548.

A comparison of the manner of dividing the profits for the last five years is given below:—

Year ended June 30—	1915	1914	1913	1912	1911
	£	£	£	£	£
Total income as above ...	283,030	339,549	348,580	330,095	320,972
Total expenses as above ...	229,106	270,044	271,927	264,493	253,718

	3,019	4,406	7,196	1,433	2,585
Brought forward	19,529	15,123	7,927	6,494	3,909
Carried forward	22,548	19,529	15,123	7,927	6,494

* Half-year to December 1914.

The total share capital issued is £706,250. In addition there is an issue of £900,000 of Debenture stock, £23,174 of which is held by the Company and included in its investments. There is also a mortgage on Hotel Russell of £30,000. The reserve fund is £20,000. The total assets are valued at £1,725,823, of which the property, goodwill, &c., stand at £1,643,342. We set out herewith a summary of the liabilities and assets as at June 30 last:—

LIABILITIES.	£	ASSETS.	£
Issued share capital... ...	706,250	Property, goodwill, &c. ...	1,643,342
4% 1st Mort. Debentures ...	900,000	Stocks and sundry debtors...	45,159
Mortgage	30,000	Investments	20,629
Reserve fund	20,000	Cash	16,693
Sundry creditors	47,024		
Profit and loss	22,549		
	1,725,823		1,725,823

The outlook is not, of course, of the best. Business will continue to be adversely affected by war conditions, and the Company must suffer considerably by the very large rise that has occurred in working costs by reason of enhanced prices for provisions, fuel, labour, &c. And altogether the resumption of even the Preferred dividend seems fairly remote.

We recapitulate herewith the capital, prices, distributions, and yields afforded at recent quotations:—

Amount	Description	Par	Price	Dividend	Yield
£		£	£	%	£ s. d.
900,000	4% 1st Mt. Perp. Deb. stock ...	100	51⅛	4	7 17 8
500,000	5½% Cum. Pref.	10	5⅛	5½	9 11 3
206,250	Ordinary shares	7/6	—	—	—

PALMER'S SHIPBUILDING AND IRON COMPANY.

THE report of this well-known Company for the year to June 30, 1915, is the fiftieth, so that the Company has attained its jubilee. The late Sir Charles Palmer founded the original firm as far back as 1851, and in 1865 the business was converted into a limited liability company, Sir Charles occupying the position of Chairman until he retired in 1893.

The results secured during the past twelve months are distinctly satisfactory, the profits being the largest for many years past. Included therein are profits accrued on work in progress to June 30 last, which have been estimated, the reason for the inclusion being that the Company has been declared a Controlled Establishment under the Munitions of War Act, 1915, as from July 12 last, involving the transfer of excess profits to the Government from that date.

The good results secured are all the more satisfactory as they come after a series of bad years. For the twelve months to June 1908 a somewhat disastrous result was shown by this Company, and, after payment of Debenture interest, there was a loss of £58,631. The unfavourable result was due partly to trade depression and partly to labour disputes and strikes of the workmen, which resulted in a paralysis

in business in all departments. For the following year a further loss of £79,653 was reported, due to similar causes, and to taking unremunerative contracts in the shipbuilding and engineering departments. Then ensued a turn in the tide, and for the twelve months to June 1910, before providing for Debenture interest, there was shown a profit of £12,552. After deduction of interest charges, therefore, the deficit brought the total debit balance of profit-and-loss account to £138,734. For the year to June 1911 there was a profit, after providing for interest charges, of £41,901, which was devoted to reducing the debit balance. During the year to June 1912 there occurred the coalminers' strike and the railway strike, both of which had a serious effect on the business, and the result was that the trading profit was only £660, and the debit balance was increased by £31,581 to £128,414. A further improvement occurred during the year to June 1913, and the net result was that the debit balance was reduced by £2,267. The Company's career has been varied and not altogether prosperous, for a similar bad time was experienced during the eight years to 1897. But from 1898 to 1907 the Company was fairly prosperous. Since then, as already indicated, chiefly owing to labour disputes, the position has been far from satisfactory.

Thus since 1908 it has not been found possible to distribute any dividend either on the Preference or Ordinary capital. And as a matter of fact, owing to an agreement entered into with Prior Lien Debenture holders when the Debentures were created, no dividend is to be paid on either class of shares until the Prior Lien Debentures are repaid, though the Company has now a balance to the credit of profit-and-loss account sufficient to pay 6% on the total issued share capital.

The profits for the year have amounted to £131,887, as compared with £96,644 for the previous year. Debenture and loan interest have absorbed £28,064, leaving a balance of £103,823. As there was a debit balance of £61,051 brought forward from 1914 the Company is able to show a credit balance carried forward—for the first time since 1907—of £42,772.

The following shows the profits made for each of the last six years, and the distribution of the same:—

Year ended June 30	1915	1914	1913	1912	1911	1910
	£	£	£	£	£	£

Carried forward...	42,772	−61,051	−126,147	−128,414	−96,833	−138,734

The Company is a builder of war-vessels, and can tackle the largest ship required. Moreover, the engine works have been placed on the Admiralty list for building turbines of the highest power. The Company first of all leased the Hebburn works of Robert Stevenson & Company, Limited, and subsequently exercised an option of purchase, thereby securing control of another important shipyard, boiler-shop, and foundry, together with the largest graving dock on the river Tyne. And, in spite of the bad times through which it has been passing, it has built several new shops and acquired subsidiary plants, in order to meet Admiralty requirements. It is very largely self-contained, as may be seen from the following extract from a speech of the late Chairman: "Here we begin with the crude ore, smelting it in our own blast-furnaces, transforming it again into finished steel, and so on to the completed ship. Forges, foundries, boiler-shops, engine-works, galvanising-works, plumbers' manufacturing shop, and various other subsidiary manufactures completely are at our own command, and available for our own purposes independently of the delays and uncertainties which so often arise in other instances. Two very valuable graving docks—including the largest dock on the East Coast—give the perfection of finish to our equipment. Palmers has seen great days, and your board's energies have been earnestly applied to preparing the way for even greater. You already have results which indicate the wisdom of the policy we have adopted."

At the annual meeting last year it was announced that a scheme of modernising the Iron and Steel Works was under consideration and negotiation. This has been brought to a satisfactory conclusion. The contemplated arrangements are being carried out, and the first deliveries of the new plant are on the ground. Since June 30 Prior Lien Debentures, amounting to £250,000, have been created and issued as security for a similar amount of cash, which is being advanced as required.

To indicate the position as at June 30 last we give the following summary of the liabilities and assets:—

LIABILITIES.	£	ASSETS.	£
Issued capital	698,564	Lands, bldgs., plant, &c. ...	[illegible]
Debenture stock	[illegible]	[illegible]	[illegible]
Working reserve ...	14,939	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
	1,671,588		1,671,588

It is distinctly satisfactory that the Company is once more able to carry forward a credit balance. And taking into consideration the fact that the Iron and Steel Works are being modernised, and that the Company is in possession of sufficient funds to carry out the important scheme, it will be evident that its general outlook is quite good, and it may fairly be anticipated that the jubilee report is but the harbinger of other good reports in the future. At present all departments are fully occupied—as indeed has been the case throughout the past twelve months—and there are sufficient orders in hand to keep the works well employed for some time to come. And as, in addition, the Company is a Controlled Establishment, it may be assumed that Government orders will enable it to be very busy right throughout the duration of the War. Hence good profits may be looked for, and the future seems bright.

The capital and prices may be seen from the following:—

Amount	Description			Par	Price	Int.

BOVRIL, LIMITED.

Owing to a heavy rise in the cost of raw materials the year 1913 showed a fairly substantial reduction in profits for this Company, the reduction occurring after a series of increases in profits for some years previously. For 1914 the profits have taken an upward turn once more, showing an increase of £20,000 over those for 1913—a satisfactory result, though it does not bring the figures up to the high level touched for 1911 and 1912. The sales for the year, excluding Government orders, have exceeded all previous records. On the other hand, the high cost of raw materials has continued, and a reduction of £10,000 has occurred in the dividend received on the holding in a subsidiary company. The net result is that the divisible profit is some £18,000 better than it was twelve months ago, and in consequence the Deferred shares receive a dividend of 2½ per cent., as compared with 2 per cent. distributed for 1913. Naturally, in one direction the Company has experienced benefit from the outbreak of war, inasmuch as it received very large Government orders for supplies; not only so, but during the early stages of the war especially private demands were also exceptional. But against the increase in orders there has to be placed heavier expenses, such as insurance and freight rates, this affecting the Company in two ways, both on the raw materials which are imported and the finished article which is exported. Altogether, therefore, it will be

realised that with nearly half the year affected by war conditions the result must be considered satisfactory. The profits available are sufficient to provide for a distribution of 4½ per cent. on the Deferred Ordinary shares, but it will be agreed that the board have acted discreetly in restricting the distribution to 2½ per cent. and carrying the sum of £17,500 to reserve.

In the following table we give a comparison of the division of profits for each of the past six years:—

	1914	1913	1912	1911	1910	1909
	£	£	£	£	£	£
Trading profits ...	504,186	284,234	554,905	343,455	286,556	288,626
Transfer fees, interest, &c.	27,668	35,252	4,660	2,279	3,088	1,483
	331,854	319,486	359,565	345,734	289,643	290,109
Sundry expenses, &c.	191,997	197,211	198,671	193,727	171,587	164,072

Ded., interest (4½ %)	22,500	22,500	22,500	22,500	22,500	22,500
Pref. div. (5½ %) ...	27,500	27,500	27,500	27,500	27,500	27,500
Ordinary div. (7 %)	52,500	52,500	52,500	52,500	52,500	52,500
Balance	35,084	17,313	55,791	45,823	22,245	20,077
Deferred dividend...	20,312	15,000	27,781	22,500	15,000	15,000
	(2½%)	(2%)	(6½%)	(3%)	(2%)	(2%)
	14,772	2,313	28,010	23,323	7,245	5,077
To reserve	17,500	10,000	27,500	22,500	7,500	7,500
	−2,728	−7,687	510	823	−255	−2,423
Brought forward ...	5,637	13,324	12,814	11,991	12,246	14,669
Carried forward ...	2,909	5,637	13,324	12,814	11,991	12,246

The reserve fund is now brought up to £267,500, which, though substantial, is not too large when it is considered that the total share and loan capital in issue is £2,500,000, out of total assets valued at the end of 1914 at £2,999,142. The largest item consists of "goodwill, trade-marks, freehold and leasehold properties, and interests in associated companies, &c.," standing at £2,485,126. We have previously drawn attention to the desirability of splitting this item, and we would once more point out that it would be well that shareholders and investors generally should know the value assigned to goodwill and trade-marks, and also be able to differentiate between the value of the properties and the interests in associated companies. Herewith we set out a summary of the liabilities and assets at the end of last year:—

LIABILITIES.	£	ASSETS.	£
Issued Capital:		Goodwill, trade marks, &c.	2,485,126
5½% Cum. Pref.... ...	500,000	Plant and office furniture	12,125
7% Cum. Ord.	750,000	Stock of raw materials ...	278,142
Deferred shares	750,000	Stock of advertising material on hand	4,472
Debenture stock, 4½% ...	500,000	Cash in hand	42,350
Creditors for loans... ...	69,000	Trade debtors	176,926
Trade and sundry creditors	96,758		
Reserve	250,000		
Reserve for doubtful debts, &c.	4,162		
Profit and Loss	88,221		
	2,999,141		2,999,141

There is no doubt that the Company in the current year will secure larger sales than ever before in its history. The Government orders alone will, without doubt, be on a considerable scale, and, consequently, the gross takings of the Company should prove a record in its history. It can scarcely be expected, however, that a corresponding increase will be secured in net profits. We have already referred to the increase that has taken place in working expenses, and there are practically no signs of any reduction in the cost of raw materials. On the whole, however, better results should be shown, and it is not at all improbable that net profits will recover, at any rate, to the 1912 increase figures. There is thus a fair probability of a further increase in the Deferred dividend for the current year. The Debenture stock may be obtained at about 86¾, giving a yield of £5 3*s*. 9*d*. per cent. On the 5½% Preference shares the yield afforded is about 5⅝ per cent. On the Cumulative Ordinary shares the yield is £6 16*s*. 7*d*. per cent., while the Deferred shares on a 2½ per cent. basis return about £7 8*s*. 2*d*. per cent., as may be seen from the following:—

Amount	Description.	Par	Price	Div.	Yield
£		£	£	%	£ *s*. *d*.
500,000	4½% Debenture stock	100	86¾×1	4½	5 3 9

Insurance Notes.

ROYAL INSURANCE COMPANY, LIMITED.

ANNUAL REPORT AND QUINQUENNIAL VALUATION.

LIVERPOOL has reason to be proud of its insurance companies. They are few in number, but their operations are vast, and they are very select in character. Perhaps the most conspicuous feature about them is the consistent carefulness of their finance. The history of the Royal Insurance Company provides one of the finest illustrations of this characteristic. The Company was founded seventy years ago, and its record, save in isolated years when historic conflagrations have occurred, has been one of ever-increasing strength. The dividend policy has been ultra-conservative. Never has the dividend been increased until, so far as could be possibly foreseen, the increase could be maintained in permanence. Never in any year, except in early instances where quinquennial life profits were distributed in a lump sum instead of being annually apportioned over the succeeding quinquennium, has the distribution to shareholders been less than in any previous year. In prosperous years the reserves have been increased, and in bad years exceptional losses have been easily provided from these sources. Thus in 1906 the Company disbursed about one and a quarter millions sterling in settlement of its losses from the San Francisco disaster, by far the largest sum of the kind in the annals of British fire insurance, with promptitude and without question, and in a short time thereafter the Company's reserves were even stronger than they had been before that occurrence. The Company has for many years past taken the lead as a fire insurance company, and it holds a high position in life, accident, and marine insurance. Its subscribed capital amounts to £2,944,680, of which £441,702 is paid up in shares of £10 each, with £1 10*s*. paid. There is also an issue of 4% Debenture stock, made in 1909 on the purchase of the British and Foreign Marine Insurance Company, amounting on December 31, 1914, to £843,800. The dividend on the Ordinary shares in respect of 1914 is maintained at the rate of 28*s*. per share, as declared in the preceding year (93⅓% on the amount paid up), while an analysis of the account shows that a large proportion of the trading profits has been employed in providing against depreciation and strengthening reserves.

The Company's fire premium income in 1914, amounting to £4,124,063, showed a variation of only

a few hundred pounds from that of 1913, but the fire claims were increased by nearly £200,000. The fire trading profit transferred to profit and loss account was £252,782 (about 6.1% of the premiums), as compared with £462,904 in 1913, the specific fire fund being maintained at £3,300,000. The marine premiums (increased by £4,596) amounted to £684,364, and while £92,809 is transferred from this department to profit and loss account, the marine fund has been increased by £59,736 to £1,030,129.

The premium income in the various sections of the accident department amounted to £1,256,002 (personal accident, increased by £7,775, £108,125; employers' liability within the United Kingdom, increased by £8,380, £223,806; general insurance, relating to employers' liability out of the United Kingdom, fidelity guarantee, burglary, third party, and miscellaneous business, increased by £119,022, £924,071). From the employers' liability section a sum of £50,000 (to which interest earnings contributed £12,136) has been transferred to profit and loss, the surplus of income over outgo in the other sections being added to reserves. At the close of 1914, after this transfer, the relative funds stood as follows:—

Personal accident fund (exclusive of £16,930 reserved for outstanding claims)	**£61,973**
Employers' liability fund (exclusive of £136,000 reserved for outstanding claims)	**182,869**
General insurance fund	**493,185**

The sums transferred to profit and loss account from the fire, marine, and employers' liability account aggregate £395,591, of which £383,455 represents trading profits and £12,136 interest earnings. To this have to be added £278,544, representing net interest and dividends of £318,509 not departmentally credited, less £39,965 being income tax on profits, and also £130,000 representing shareholders' quinquennial life profits, as hereunder referred to, bringing up the total surplus from the operations dealt with in the profit and loss account for 1914 to £804,135, which has been disposed of as follows:—

In provision for full year's dividend at 28s. per share, less income tax	**£380,477**
In payment of interest on Debenture stock	**31,150**
In transfer to general contingencies fund (thereafter standing at £400,000)	**300,000**
In transfer to superannuation fund (thereafter standing at £139,028)	**25,000**
In addition to balance of profit and loss account carried forward	**67,508**
	£804,135

The balance in profit and loss account carried forward to 1915 amounts to £1,117,063, while the reserve fund is maintained at £1,600,000. These sums added to the fire fund aggregate £6,017,063, and as the other departmental funds may be assumed to be ample for the risks to which they are hypothecated, the excess of that sum over £1,649,625, which represents the estimate, at 40% of the relative premiums, for receiving off the unexpired fire risks under normal circumstances, may be looked on as the Company's special conflagration reserve, amounting to the magnificent figure of £4,367,438, exceeding in itself the whole fire premium income of 1914.

The actuary's report on the quinquennial valuation of the life policies accompanies the directors' report for 1914, and the figures relating to the life business as set forth and explained therein may now be alluded to.

During 1914 the Company's new life business amounted to £1,645,204 in sums assured, of which £72,858 was reassured, the net retention at its sole risk being £1,572,346, as compared with £1,753,891 in 1913. The total net life premium income, increased by £28,775, amounted to £836,349, of which expenses of all kinds, inclusive of commission, absorbed about 12.8%. Claims by death (increased by £55,507) amounted to £543,917, and claims by survivance to £178,954. The death claims included £25,000 arising from the War. The net interest yield on the life funds, after deduction of income tax, seems to have amounted to about £3 18*s.* 8*d.* per cent. Before transfer of £100,000 to general contingencies fund and the allocation of £130,000 as shareholders' quinquennial profits, the life assurance fund, increased by £355,735 through the year's operations, amounted to £10,885,580. The annuity account shows that a sum of £52,868 was received as consideration for new contracts, that securities of £70,459 were paid, and that the annuity fund was increased by £10,462 to £790,212. Capital redemption premiums, £8,703; relative fund, £44,974.

The quinquennial valuation, as in 1909, was made for assurance by the O^M and $O^{M(5)}$ tables in certain combinations, the rate of interest assumed for the accumulations in the assurance section being 3%. This basis was, however, strengthened in a number of ways, special reserves being set aside for various purposes, including one against further war claims. The annuity reserves were also strengthened. The total surplus disclosed by the valuation is £1,312,539, of which, as above stated, £130,000 is allocated to the shareholders' proportion and £100,000 is carried to the general contingencies account. The amount allocated to participating policyholders is £964,073, and £118,466 is carried forward as unappropriated. The reversionary bonus on participating policies is maintained at the same rate as for 45 years previously, viz., 30*s.*% per annum, which is a highly satisfactory result in view of the financial depression which has characterised the last quinquennium. The actuary reports as follows: "The divisible surplus has been entirely derived from favourable mortality, from the margin between loading and expenses, and from the excess of interest earned over the rate assumed. The Company has now declared the same rate of bonus unchanged, through many changing conditions, for a period of 50 years; and the policy of increasing the stringency of the reserves which has been steadily pursued by the directors has placed the life department in a position of great strength to meet whatever contingencies the future may have in store."

The total assets of the Company, as shown in the balance sheet on December 31, 1914, amounted to £22,685,829. The assets are reported as having been in the aggregate fully of the value stated, taking the Stock Exchange securities held at December 31, 1913, at or below the mean prices of that date (less accrued interest and dividends) and in the case of securities acquired since that date taking them at cost price or less than cost.

TWO CHEAP RUBBER SHARES.

In The Statist of October 9 we called attention to the shares of two young rubber companies which have reached the stage when rapid progress may be looked for in the matter of increase in output, profits and dividends. The market prices of the shares warranted the assumption that the purchaser could fairly safely anticipate a steady increase in the yield on his money, and substantial advance in the value of his capital. These two companies were the Bekoh and the Batang Malaka, and as shares offering such advantages at a reasonable price are difficult to find we are induced to give particulars of two additional young rubber producers, the Bandar (Sumatra) Rubber Company, the £1 shares of which have a market price of £1⅛, and the Cheviot, whose 2*s.* shares are at present quoted at 2*s.* 8*d.* Of course, a period of wait must ensue before the full reward is reaped, but both companies have commenced paying dividends, and there is present the great desideratum of a very low market capitalisation per planted acre in each case.

BANDAR SUMATRA.

The Bandar Company's rubber output is expanding substantially, as will be seen from the table given

below, and for the first two months of the current financial year its production has been 43,150 lb., or 11,540 lb. more than in the corresponding months of 1914. The report for the financial year ended July 31 will not be issued until next month, but meantime, on a conservative basis, assuming the rubber output reported of 204,512 lb. as being sold at 2*s.* 2½*d.* per lb.—a conservative figure probably—and estimating "all in" costs at 1*s.* 4*d.*, a profit in the region of £10,000 may be looked for. In addition revenue is obtained from coffee, which in the year 1913-14 brought in about £2,000. Consequently the declaration of a dividend of 10% for the year is not unlikely, and if this estimate is confirmed the yield of the shares at their present price would be about 9%. When the total *planted* acreage is in full bearing the crop should be quite 700,000 lb. annually, so that in future years dividends should show further substantial increase. So far only about 770 acres of the planted area of 2,585 acres have reached the tapping stage, but during the next two years a very large additional area will come into bearing. This is evident from the following statement showing the ages of the rubber plantations:—

	Acres		Acres
To 1906	182	1910	990
1907	247	1911	728
1908	238	1912	78
1909	102	1913	20
		Total	2,585

Concluding our remarks with the statement that the balance sheet of the Company at end of July 1914 showed over £10,000 of surplus liquid assets, we give the following table of particulars relating to capital, acreage, and past outputs, costs and profits:—

Bandar Sumatra.

Year ends July 31.

Issued capital			£91,250, in £1 shares
Market price, £1 shares			14
,, capitalisation			£100,050
Total acreage			3,727
Planted ,, ...			2,585
Market capitalisation per planted acre			£41
	1915	**1914**	**1913**
Output (lb.)	204,512	159,114	103,452
Per planted acre (lb.)	78	62	40
"All in" costs	1 1*	1 7	1 10 55
Net profit	£10,000*	£7,568	£3,557
Dividends	10%*	6%	6%

* Estimated.

CHEVIOT.

As to the Cheviot, this is a Malayan undertaking. For the current year to December 31 the rubber crop was officially expected to be 220,000 lb., against 213,685 lb. in 1914, but from the output to date it looks as if the 1915 production will be nearer 240,000 lb. The smallness of the increase is explained by the fact that practically the same acreage is being tapped this year as last. Next year, however, and thereafter, large additional areas will come into bearing, and future annual outputs should consequently increase rapidly. This will be evident from the following statement of the acreage planted with rubber yearly from 1906 to 1913:—

	Acres		Acres
1906	72.1	1911	402.9
1907	421.5	1912	549.1
1908	88.7	1913	548.2
1910	417.6		
		Total	2,500

So far only the 582 acres planted to 1908 have reached the tapping stage. Next year the 417 acres planted in 1910 should be in bearing, and so forth. The market capitalisation per planted acre is only £47 10*s.* For 1914 a net profit of £9,664 was earned, out of which a dividend of 7½% on the capital was paid, absorbing £6,630; £4,000 was transferred to reserve, and the carry-forward was reduced by £1,000 to £3,673. For the current year, having regard to the probability of a somewhat higher price being realised for the rubber, we estimate a net profit of £12,000, and this would permit of the dividend being increased to 10% and about £2,000 added to reserve. The directors may elect, however, to adopt a more cautious policy, inasmuch as capital expenditure on estate upkeep for the current year is estimated to be £7,745. On the other hand, the balance sheet at December 31, 1914, showed surplus liquid assets, after payment of the dividend, amounting to £9,470, and there is the prospect of a large increase in earnings next year, when the area tapped should be 1,000 acres instead of about 600 acres as at present. Eventually, when the whole of the 2,500 acres planted reach maximum production of, say, conservatively, 300 lb. per acre, the annual output should be quite 750,000 lb., which, at a profit of 1*s.* per pound, would give an annual net revenue of £37,000, equal to more than 40% on the issued capital. Details as to capital, acreage, past outputs, costs, and profits are given below:—

Cheviot.

Year ends December 31.

Issued capital			£88,412, in 2*s.* shares
Market price, 2*s.* shares			2*s.* 3*d.*
,, capitalisation			£118,216
Total acreage			3,034
Planted ,, ...			2,500
Market capitalisation per planted acre			£47½
	1915*	**1914**	**1913**
Output (lb.)	240,000†	213,685	156,138
,, Per planted acre (lb.) ...	96	85½	62½
Gross price realised (per lb.) ...	2/3	2/2	2 1 09
"All in" costs	1 2/1	1 1/47	1 10 36
Net profit	£12,500	£9,664	£3,060
Dividends	10%	7½%	Nil
Carried forward	£4,500	£3,673	£4,341

* Estimated. † Actual crop for nine months to September 30, 170,235 lb.

Correspondence.

TAXING CAPITAL.

To the Editor of THE STATIST.

SIR,—I ask you for a little space to protest against the article which appeared first in your last week's issue. So far from being desirable that capital should not be taxed, the true principle is that capital should be taxed heavily. It was all very well for the so-called orthodox economists in the early part of last century to fight against the taxation of capital, because they were either themselves actually engaged in business or they belonged to business families, and, moreover, they were engaged in fighting the landowners and the workpeople. But in the present day their argument will not hold water. There are two kinds of capital. The first is infinitely the larger and the more important. It consists of all the improvements made upon the land, of every kind of buildings upon the land whether for dwelling or business purposes, of railways and roads, of telephone and telegraph systems, of canals and harbours—in short, of everything that ministers to the ordinary work or comfort of the world. Now this vast amount of capital is, and always has been, taxed, and no man in his senses would propose that it should go tax free. But there is another kind of so-called capital. It consists of the present savings of the community—savings which are not yet invested, but which are being temporarily used, though they will be ultimately invested permanently. These savings really belong to Tom, Dick, and Harry—to every person, that is to say, who lives within his or her means and lays by a little for a rainy day. They are usually lodged, while waiting for investment, with bankers. Under the term "bankers" I include every person or body of persons who does any kind of banking business, from the Government down to the smallest loan office. This so-called capital is in real truth debt. You and I and our neighbours in general find it convenient to lodge whatever we save immediately with our bankers, for they render us important services. And the bankers use the money so temporarily lodged with them in lending and discounting. What sensible argument can be put forward to exempt bankers from paying tax upon moneys got so largely and so easily? There might be a colourable argument for excusing the persons who save the money. It might be said that saving is so important that it is worth while remitting taxation on money actually being saved but not yet invested. I do not agree with the argument

in the least, but it would be colourable. When it comes to the bankers it is simply nonsense. They pay either in actual interest or in services rendered for the loans they receive from their depositors, and they make a handsome profit on their employment of those loans. If they did not they would very soon give up deposit banking. In the name of commonsense, why should these gentlemen be allowed to pocket the whole of the profits, while you and I—the persons who have been saving it—are taxed? If there is any ground at all, as already said, for exemption—and I deny that there is—it is the actual persons who save who ought to be rewarded, not those who avail themselves of the savings of others to add to their own wealth. The banks have, it is true, a small amount of subscribed capital and of reserves. But the subscribed capital and the reserves are a mere bagatelle compared with the deposits. It is the deposits that give the banks the enormous influence they exercise, and the deposits do not belong to the banks. They are simply debts.

It is not capital, then, as Ricardo and interested persons like Ricardo have argued, that contributes materially to the prosperity of a country. It is, firstly, invention; secondly, hard work; and, thirdly, intelligence. As a matter of fact, the invested capital —what I may call the permanent investments of every country—are every now and then being destroyed for the express purpose of increasing the wealth of the community. When railways were introduced, for example, they destroyed an immense amount of capital. The whole business of the post roads was brought to an end, and all the inns upon the post roads were either shut up or deprived of most of their value. Before that, the introduction of machinery killed hand-loom weaving, and so ruined some of the most deserving of the population of the United Kingdom. And, if I were free to use more of your space, I could add indefinitely to the deliberate destruction of capital which is brought about every time a really great new invention is put into execution. Capital, then, has no sacred character; is not really of very great value; is a thing which it is often extremely desirable to destroy. I make bold to say that when this War is over, and the public have time to think of their real interests, a tax which would kill inefficient machinery would be one of the most beneficial taxes that could be imposed.

AN ECONOMIST OF THE NEW SCHOOL.

[Our correspondent has fallen into a very common error. He has mistaken banking deposits for savings. Banking deposits are merely the nation's pocket money designed to meet current outgoings, and are roughly sufficient for the nation's everyday expenditures for six months. Savings are reproductive expenditures, and the amount of these in this country is, roughly, ten times greater than the annual addition to bank deposits. It is, of course, necessary to increase bank deposits—the nation's pocket money—as the nation's income increases, but it is essential to increase the nation's machinery of production, which is done by applying income to purposes that will increase the nation's productive power. If the supply of savings—*i.e.* capital—for this purpose stops or is inadequate, then the nation's income ceases to expand or expands but slowly. It is of very great importance that nothing should be done to stop savings, for if it is then the power of the country to expand its income and to provide its population of all classes with greater incomes and spending power will also stop. The matter is as important for wage-earners as for the rest of the community.—Editor, THE STATIST.]

"A Guide to South America." By W. A. Hirst. A book for travellers and all who are interested in South America, including the Panama Canal. Price 6*s*. (London: Methuen and Co.)

Life Assurance at Minimum Rates
A
PLAN *of* ASSURANCE
SPECIALLY ADAPTED
for PRESENT TIMES.
For particulars address the
GRESHAM LIFE ASSURANCE
SOCIETY, LIMITED,
ST. MILDRED'S HOUSE, POULTRY, E.C.
Founded 1848. Funds £10,500,000
The GRESHAM FIRE & ACCIDENT INSURANCE
SOCIETY, LIMITED.
Transacts all classes of Fire and Accident Business.
CHIEF OFFICE: ST. MILDRED'S HOUSE, POULTRY, LONDON, E.C.

PROFITS & INCOME INSURANCE COMPANY, Limited.
9 FLEET STREET, LONDON, E.C.
Assets exceed - £300,000
PERMANENT SICKNESS AND ACCIDENT INSURANCE.
Policies are granted, renewable at the option of the Assured, up to a selected age not exceeding 65, insuring against temporary or permanent Loss of Income.
SPECIAL FEATURES.

Commercial.

DEARER BREAD.

THE rise in the price of bread projected by London bakers a week or more ago proves difficult of accomplishment, nevertheless, the trade is seemingly bent on that development, and the remarkable prosperity of the industrial classes appears to make the enterprise less hazardous than in an ordinary year. The London area which the rise would affect includes more than seven million inhabitants. Against an equal rise in Australia an entire Commonwealth would be up in arms, yet Australia cannot show a population of seven

millions. The bakers' excuse is not so much the dearness of wheat as the difficulty of delivery, and here we have the cause why statisticians approach the whole bread question with so little confidence. The present price of wheat makes it perfectly practicable to sell a quartern loaf for sevenpence over the counter, and here we have the baker getting eightpence and trying to get eightpence halfpenny, a rise equal to 4*s*. on the sack of flour! What is the explanation?

The first trouble is that of the little luxuries of the consumer. Hoxton, according to the Right Hon. Charles Booth's tables, keeps very few domestic servants; Hampstead keeps more than any other suburb per head of population. But both Hampstead and Hoxton are at one that it would be "derogatory" to fetch their own bread. A little point seemingly, yet it involves the baker in what in a moment of expansion the humble shopkeeper may tell you is the "worry of his life." The public (as we will *not* tell you) is a poor judge of bread, but the public, as he will let you know in detail, is a most particular judge of manners, and if the baker's boy is rude to No. 13 or leaves the account of No. 14 at No. 15, the unhappy vendor may write that customer off his list. Complaints "*re* delivery" are probably ten to every one "*re* bread."

Since the War the troubles of bakers in getting bread delivered at the houses of customers have increased "almost beyond bearing" as local purveyors remark. The manners of a Chesterfield combined with the accuracy of a drill sergeant are what the public expect of the average baker's boy, and this at a time when the latter no longer bears "talking to" by his employer. At a word he speaks darkly of "going to the Front." The younger men, who had some title to the substantive, seem already to have gone, and the baker, reduced to offering what he speaks of as "almost any money" to a steady hand at regular deliveries, turns to an advance in the price of bread itself as the best way out of the difficulty.

The other trouble is a very old one—that of giving credit. It need only be said now that the War has greatly augmented this difficulty. To sue, or even to threaten, in normal times is resented. With war raging it is regarded as more or less of an outrage. There can be little doubt that this addition to bakers' troubles is a substantial one. It may be dismissed as simply the case of a little more capital being required; but the purveying of bread is essentially a small local business, and the purveyors have not the capital, neither would the present emergency be the best time for raising it. Here again, then, we have the weak man's policy obtruded—the policy of putting the extra cost on to the consumer.

The fallacy in this idea of the small baker, from whom we hope we have not withheld our sympathy, is that bread will not as a market commodity bear frequent fluctuations. As we write the new wheat crops of Canada and the United States are much cheaper for December than for current delivery, while close behind them come the new January harvests of Australia and Argentina. The attempt to rush bread prices up to eightpence halfpenny for November delivery with the cheaper wheat of December showing the way to profit at perhaps a penny a loaf less would lead, according to all precedent in the baking trade, to a policy of under-cutting and local rivalry which too often instals men of straw and no credentials in the place of established and respectable vendors. There are few things deadlier in the retailer's business than where the newcomer, denounced for "under-cutting," is in the position to show that he can make a very fair living profit at the sum which he charges, and that being so, under what system of trade economics should he charge more? There may be American speculation this winter, as there was last, but the best judges consider its wings clipped, and the average baker, to do him justice, is not up behind American speculation, or even interested in it. He is in a very temporary emergency, and his flying to a rise in prices would not be a solution, because the necessity to reduce prices recently raised would be yielded to reluctantly, and meanwhile competitors would have come in, with an unanswerable appeal to the producer.

Household bread at Christmas is much more likely to be obtainable at sevenpence halfpenny than to cost eightpence halfpenny, wherefore to inflate values for a brief intervening period appears to have a maximum of risk about it, and for the most transient advantage.

SCOTCH WHISKY TRADE.

Since the War began revolutionary changes have taken place in the Scotch whisky trade. At times—as, for instance, during Mr. Lloyd George's campaign for total prohibition—the industry seemed to be threatened with extermination. The least that could befall the trade appeared to be a substantial restriction of output, and it looks as if laws have been passed with that end in view. Nevertheless, the trade continues to enjoy a very fair degree of activity, and it is still a moot point if the consumption has been reduced to any serious extent. As a matter of fact, the situation created by the steady growth of this enormous industry throughout the years is one of great complexity, and does not admit of such rough-and-ready treatment as many ardent reformers seem to think.

When Mr. Lloyd George put forward his proposal for prohibition, few even in the trade foresaw that the sole result would be the hurried passing of a measure which a large section of the trade itself had advocated for many years. But this proved to be the ultimate outcome, and the Immature Spirits (Restriction) Act was passed, providing for the detention in bond of all spirits until they were three years of age, temporary concessions being made as to the release of spirits with from two to three years of age on the payment of an extra duty of 1*s*. per gallon.

Effect of Act.

The immediate effect was to add enormously to the value of the existing stocks of grain whisky, stocks available for immediate use, viz., with three years of age, appreciating by 100 or more per cent. This applied to grain whisky; but although a comparatively small proportion of Highland malt whisky was used with less than three years of age, the measure had a hardening effect upon the quotations for these also, as, with matured grain whisky suddenly doubled in value, and commanding as high a price as equivalent ages of the best Highland malt whisky, there was a distinct inducement to blenders to use a larger proportion of the latter, and as the stocks of these were by no means superabundant, the effect upon quotations was immediate. In the same way Lowland malt whiskies increased substantially in value, partly because a certain proportion had been passed into consumption with less than three years of age, but mainly owing to the fact that blenders were driven to make a larger use of Lowlands owing to the dearness of grain whisky, which had come to be the principal ingredients of their blends. It is easy to see that if the demand is partly satisfied out of the stocks of whisky with less than three years of age—no matter which category—a sudden and unexpected embargo on the utilisation of such whisky, particularly if the production, and, consequently, the stocks had been allowed to run down to bare market requirements, or even less, is bound to cause a hiatus in the supplies, which can only be made good by an increased production, as larger stocks will have to be carried in future, the whisky now being produced not being available until three years hence. The natural operation of the law of supply and demand as outlined above may, of course, be interfered with by any measures which are taken to restrict the con-

sumption, as it is obvious that whatever tends to check the demand also affects the necessity for maintaining the supply. Thus it is that while the existing stocks will be inadequate to meet the demand on the pre-War basis, their deficiency will be reduced in proportion to the diminution in the consumption.

Another new factor which, as a direct consequence of the War, has recently come into operation is the greatly increased cost of production. In the first place, barley, the principal raw material of all malt whisky distillers, and particularly of the Highland distillers, has increased in price from an average of 25*s.* per quarter to approximately 45*s.* per quarter.

Rise in Prime Cost.

The Highland distillers calculate that an increase of 20*s.* from 25*s.* per quarter represents an increase of from 6*d.* to 9*d.* per gallon in the cost of the spirit, according to the varying conditions under which the distilleries operate. In addition, coal, of which a large quantity is used, and all other materials have greatly increased in price, while labour is very much dearer, and in some places almost unobtainable, with the result that another 6*d.* per gallon has been added to the cost of the spirit. It is customary for distillers to fix their prices of the new season's make in October, and on the present occasion the Highland distillers felt that nothing short of an advance of 1*s.* per gallon would justify them in lighting their fires.

For years—indeed, since 1898, when the great boom collapsed—the Highland distillers have experienced a very lean time. Many new distilleries had been built in the immediately preceding two or three years, while others had increased their capacity three or four fold. The production had accordingly been increasing by leaps and bounds, until it greatly exceeded the demand. The stocks in bond had been practically doubled in a comparatively few years, and whisky prices, which had been inflated to an absurd extent, came down with a run. When the bubble of speculation was pricked, many of the companies floated during the boom found themselves heavily handicapped with inflated capitalisation, and being able to dispose of only a tithe of their possible production, have since been quite unable to earn a reasonable return. Through reconstructions and otherwise much of the "water" has since been squeezed out of these over-capitalised concerns, but the fact remains that the hundred or so of Highland distilleries, with their existing capacity, are far and away beyond the needs of the trade.

One result of the boom and its aftermath has been that Highland distillers have been entirely at the mercy of the blenders, who have been able to buy their supplies of raw material, *i.e.*, single whiskies, at practically cost price or little more. This has proved highly advantageous to the big blenders, many of whom have built up huge distributing businesses on this copious supply of cheap material. Naturally, the blenders are loth to pay large increases for new malt whisky, particularly with the values of matured whiskies, suddenly advanced, and they have been loudly asseverating that the very most that the Highland distillers could hope for was an advance of 6*d.* per gallon. The Highland distillers, on the other hand, felt that they were more favourably situated than for a good many years, as the effect of the detention in bond enactment had been, as already explained, to reduce the available supplies of matured whisky, so that the maintenance of a moderate output during the coming season was absolutely essential if a famine in usable whiskies a few years hence was to be avoided. The distillers accordingly met under the auspices of their association and decided that prices all round be advanced by 1*s.* per bulk gallon, distillers reserving to themselves the right to further advance prices as the season progressed, or, alternatively, to enforce a sliding scale whereby the price of whisky would be increased or reduced by 1*d.* per gallon in accordance with every rise or fall of 1*s.* 6*d.* per quarter above or below 45*s.* per quarter in the price of barley. It was also proposed that the distillers should inaugurate the long-discussed reform of charging warehouse rent for whisky stored at the distillery, in accordance with the practice adopted by the grain whisky distillers many years ago; but a decision on this point was postponed, the feeling being that it would be unwise for distillers to push their advantage too far for the time being. The producers of other malt whiskies—Islays, Campbeltowns and Lowlands—are also advancing their prices by a similar amount. Barley is now changing hands at from 45*s.* to 48*s.* per quarter, and with the home supply restricted, and the virtual impossibility of eking out supplies as in previous years by foreign imports, looks like going higher rather than lower.

AMERICAN COTTON.

Liverpool, Thursday.

Our market since our last report has developed a reactionary tendency, and to-night values for American show a decline of 25 points on the fortnight, while Egyptian has declined fully 50 points. Closing quotations are: January-February delivery American 6.85*d.*, January delivery Egyptian 9.67*d.*

For the time being it would appear that the American speculative effort had exhausted itself, and without new stimulus it will be difficult to sustain prices. We hear that the leading "bull" interest in America have quietly liquidated their holdings and have left the public, as usual, to carry the baby. All over the South people have been buying and holding actual cotton, and the operation seemed very promising as long as the market was advancing, but now, if the decline goes further, we may witness a scramble to sell. Recent crop news has been of a more favourable character, and if the crop escapes the danger of frost for a little longer it may be that the crop will promise a good deal larger yield than it did early this month. We fancy that the coming crop will pretty nearly balance consumption, and that at the end of the season there will be a substantial balance to carry over. The decline to-day was accentuated by the political situation in France. If a new Cabinet there is formed which commands the confidence of the French Parliament this temporary depressing influence will be removed from the market.

On Monday the third ginners' report for the season was issued by the United States Government. The quantity ginned up to October 25 was returned as 5,713,000 bales, against 2,900,000 last report and 7,622,000 for the corresponding period last year. It is too early in the season for the report to be taken as a safe indication of the size of the crop, but so far as it goes it supports ideas round about 12,000,000 bales.

On the spot the demand continues on an active scale, without any change in the selling basis. There is a good general demand for all qualities, and in view of the disappearance of any premium on distant futures, merchants are willing to meet buyers, and prefer to sell rather than hold for too exacting terms. The local stock is now beginning to increase, and as new imports arrive there will be greater competition to sell, so that holders are acting wisely in disposing of their stocks at the present remunerative prices.

COAL AND STEEL.

The tendency towards firmness in the Scottish coal market observable a fortnight ago has assumed increased strength and in both the home and export trade there is a good demand. The export business is somewhat handicapped by the still rising freights and increased scarcity of tonnage. Freights have risen

to record heights, and may very well go higher, while tonnage has further decreased on account of war operations. Exporters are, therefore, in the position that orders in hand cannot be fulfilled.

In the home department, trade in Household sorts is quite good and higher prices are being obtained. Coal is moving more freely from the pithead, and the stocks which were accumulated during the recent period of comparative idleness are disappearing. It is not expected that the miners' demand for an extra ninepence per day will cause serious trouble, and though the negotiations have been adjourned, a friendly and satisfactory settlement is looked for when the representatives of both parties come together again.

The recent announcement of the Scottish steel-makers that they are unable at present to deal with new work was not unexpected. The heavy demand on United States works has resulted, as already stated, in a serious shortage of United States billets on this side of the Atlantic, and the shortage will have more serious effects later on unless something is done at once to provide a supply. Most makers have withdrawn quotations entirely, as they are unable to undertake new work out of their limited supplies. The quotations of £10 15*s.* for ship-plates and £11 for angles are, therefore, merely nominal.

TROPICAL OILCAKE.

Respecting remarks we gave last week on benefit of increased use of tropical products for the feeding of our live stock we may give some additional facts.

The following brief comparison of average prices per food unit will indicate the practical importance of the employment of fattening oil-plant products from the tropics:—

Non-Oil Products.

	Per Food Unit s. d.		Per Food Unit s. d.
Maize	1 7	Maize meal	1 10
Bran	1 8	Rice meal	1 10
Malt culms	1 9	Middlings	1 10

Oil Products.

	Per Food Unit s. d.		Per Food Unit s. d.
Ground-nut cake ...	1 3	Palm nut kernel cake. .	1 9
Coconut cake	1 8	Linseed cake	2 0

Generally speaking, it is dubiously profitable to fatten stock at a cost of over 2*s.* the food unit. This is why the present dearness of beans, peas, oats, barley, and feeding treacle, which are all decidedly above that price to-day, is causing serious apprehension among our farmers.

New Issues.

SOUTH AUSTRALIAN GOVERNMENT FIVE PER CENT. LOAN.

There has this week been offered for subscription by the Commonwealth Bank of Australia £2,000,000 of 5% bonds of the Government of South Australia at the issue price of 99%. In part subscriptions will bring in new money, but a portion of the issue will be applied to redemption of existing 4% bonds. There are £552,000 of 4% bonds falling due for repayment January 1, 1916, and £1,365,300 falling due April 1, 1916. Holders of these bonds can convert, on terms specified in the prospectus, their 4% bonds into the new 5% bonds. Briefly, the terms are that the bonds falling due for repayment January 1 next will be entitled to immediate cash payment of £1 10*s.* 8*d.* per cent., and bonds that are due April 1, 1916, to a cash payment of 9*s.* 4*d.* Bonds not converted will be paid off at maturity. The new form of 5% bonds is convertible into 5% Registered stock at any time up to April 6, 1916. The principal is to be repayable April 1, 1923, or the Government can redeem at par on or after April 1, 1921, on giving three calendar months' notice. Steps have been taken for complying with the requirements of the Colonial Stock Act, whereby trustees may invest in the stock. Needless to say, yielding as they do over 5% to the purchaser, the bonds are an attractive gilt-edged investment.

TALTAL RAILWAY.

The announcement is made by the Taltal Railway Company of a balance dividend in respect of the past year of 4*s.* per share, making, with the interim dividend already paid, 6*s.* per share, or 6% per annum. This is the same as distributed for 1913-14, and the fact that the Company is maintaining the dividend at this rate, although it has by no means been earned, seems to indicate that the directors take a more hopeful view of the outlook. The disastrous effect of the War upon the Chilean nitrate industry is wholly responsible for the set-back in the Company's prosperity. The falling-off in traffic receipts was as much as £176,000, or 57%, and although every effort has been made to work with economy, the savings effected have been insufficient to prevent a heavy drop in net revenue. Indeed the profit earned for the year amounts to only £30,876, as against £131,797, and inasmuch as it requires £54,000 to pay the dividend the deficit of £23,123 has to be made good out of the balance brought in from the preceding year, and the sum now carried forward is reduced from £50,354 to £27,231. To show the smallness of the profits of the past twelve months, in comparison with those of recent years, we give the following:—

	1914–15	1913–14	1912–13	1911–12	1910–11	1909–10
	£	£	£	£	£	£
Net profit ...	30,877	131,797	132,872	122,099	93,600	100,392
Ordinary dividend	54,000	54,000	81,000	67,500	67,500	67,500
Rate per cent.	(6%)	(6%)	(9%)	(9%)	(9%)	(9%)
Balance	Dr. 23,123	77,797	51,872	54,599	26,100	32,892
Reserve, &c. ...	...	50,000	52,000	50,000	25,000	25,000
	Dr. 23,123	Cr. 27,797	Dr. 128	Cr. 4,599	Cr. 1,100	7,892
Brought forward	50,354	22,557	22,685	18,086	16,986	9,094
Carried forward ...	27,231	50,354	22,557	22,685	18,086	16,986

The set-back, severe though it has been, is, we believe, quite temporary. The prosperity of the Company depends entirely upon the nitrate industry, and whereas with the outbreak of war twelve months ago the Chilean trade was completely paralysed, at the present time there is a growing demand for the fertiliser, both for agricultural and explosive purposes, and the price has risen appreciably. This means that many oficinas, which were compelled to close down owing to the War, are now restarting operations, with the result that railway transport business is steadily improving and general trade in Chile is on the mend. In the first three months of the current year the traffic receipts of the Taltal Railway show a further decline on balance of £4,890, but the whole of this falling-off occurred in July, since when there has been a marked recovery, the September receipts being no less than £10,245 better than those of September last year. It looks, therefore, as though the corner had been turned, and inasmuch as the earnings of the next few months will compare with even smaller takes a year ago than those of July, August, and September, the rate of recovery as the year progresses should be greatly accelerated. The dividends paid by the Company since 1903-04 are set out below:—

Taltal Railway.

	Dec. Half %	June Half %	Year %		Dec. Half %	June Half %	Year %
1914–15 ...	4	8	6	1908–09 ...	6	10	8
1913–14 ...	6	6	6	1907–08 ...	6	8	7
1912–13 ...	6	12*	9	1906–07 ...	6	8	7
1911–12 ...	6	12	9	1905–06 ...	6	8	7
1910–11 ...	6	12	9	1904–05 ...	6	8	7
1909–10 ...	6	12	9	1903–04 ...	4	7	5¼

* Also bonus of one new £5 share for five old shares.

The price of the £5 share is 5$\frac{1}{16}$, and on a 6% dividend basis the yield afforded is about £6 3*s.* 6*d.* per cent.

ILLINOIS CENTRAL RAILROAD.

SIXTY-FIFTH ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

To the Stockholders of the Illinois Central Railroad Company:

The Board of Directors submit herewith the following Report of the operations and affairs of your Company for the year ended June 30, 1915.

The number of miles of road operated on June 30, 1914, was		4,769.27
Additions for year;		
January 9, 1915—Fredonia and Reeds Railroad—Reeds Junction, Ill., to Fredonia, Ill.		1.77
Mileage added account of trackage rights, revision of line and remeasurements		3.16
		4,774.20
Less: January 9, 1915—Reclassification of first main track, Carbondale Junction, Ill., to Fredonia, Ill., as other main track, due to construction of Fredonia and Reeds RR.	6.64	
May 26, 1915—Reduction due to construction of cut-off between Kuttawa, Ky., and Cumberland, Ky.	.42	
		7.06
The number of miles operated on June 30, 1915, was		4,767.14
The average number of miles of road operated during the year was		4,770.03

INCOME.

The following is a statement of the Company's income for the year compared with the previous year:—

	1915.	1914.	Increase (+) or Decrease (−)
Average miles operated during year	4,770.03	4,768.51	+ 1.52
Railway operating revenues:	$	$	$
Freight	41,212,270 70	43,871,271 70	−2,659,001 00
Bridge tolls and miscellaneous freight	[illegible]	3,464,624 56	− [illegible]
Passenger	12,640,597 28	13,715,979 06	−1,[illegible] 78
Bridge tolls and miscellaneous passenger	[illegible]	247,762 37	− 36,682 27
Mail	1,050,[illegible]	1,042,042 96	+ 8,663 63
Express	1,589,501 31	1,770,646 75	− [illegible] 44
Other passenger train	457,177 96	475,668 53	− 18,490 57
Other transportation	[illegible]	[illegible]	− 50,794 36
Revenue from operations other than transportation	52[illegible]	481,123 21	+ 40,882 81
Total railway operating revenues	[illegible]	65,873,700 02	−4,173,327 54
Railway operating expenses:			
Maintenance of way and structures	8,8[illegible]	9,205,946 38	− 366,474 32

* Deficit.

REVENUES.

For the current year the operating revenues amounted to $61,700,372.48, as compared with $65,873,700.02 in the previous year, a decrease of $4,173,327.54, or 6.34%.

Freight revenue amounted to $41,212,270.70, a decrease of $2,659,001.00, or 6.06%. The principal portion of the decrease was on the southern lines, the northern lines showing a comparatively small decrease and the western lines an increase. The bituminous coal traffic showed a substantial increase both in tonnage and revenue over last year, and there was also a heavy increase in the movement of grain through the port of New Orleans, which added materially to the revenue for the year. These gains, however, were not sufficient to offset the loss in revenue due to the falling off in lumber traffic and the heavy shrinkage in merchandise and miscellaneous freight business.

The revenue from the transportation of passengers was $12,640,597.28, a decrease as compared with last year of $1,075,381.78, or 7.84%. There was a substantial decrease in the revenue north of the Ohio River; but the greatest falling off in business was in the territory served by the Southern lines.

Statistics as to freight and passenger traffic will be found by reference to Table No. 12 of Pamphlet Report.

EXPENSES.

The operating expenses were $47,570,147.65 this year, as compared with $50,775,327.46 last year, a decrease of $3,205,179.81, or 6.31%.

MAINTENANCE OF WAY AND STRUCTURES.

Maintenance of way and structures expenditures amounted to $8,839,472.06, being a decrease of $336,474.32, or 3.98%, as compared with the previous year. This decrease was due in part to the smaller quantity of new rail laid in renewals and partially by the fact that the previous year's expenses were increased by substantial charges on account of the construction of the new passenger terminal at Memphis and other additions and betterments work, while the operating expense portion of additions and betterments work was not so large this year.

Included in the renewals, the cost of which was charged to operating expenses, were the following:—

2,087,531 cross ties were renewed, this being equivalent to 672.92 miles of continuous track, or 8.99% of all ties in track, including sidings.

10.21 miles of track were relaid with new steel rail and

5.65 miles with second-hand steel rail, replacing rail of the same weight.

7,428 lineal feet of timber and pile bridges were replaced by embankments.

1,504 lineal feet of iron and 4,136 lineal feet of concrete pipe culverts were put in.

486 miles of ballasted track were repaired or renewed to restore the track to its original standard.

As to work, the cost of which was charged wholly or in part to "Road and Equipment," comments will be found on page 10 of the full report under "Physical Changes."

MAINTENANCE OF EQUIPMENT.

The expenditures for maintenance of equipment were $13,892,443.73, a decrease of $617,635.76, or 4.26%, as compared with last year. The decrease is accounted for by a reduction in repairs to freight equipment, both locomotives and cars. Considering the volume of business handled the equipment was well maintained during the year.

Depreciation charges amounted to $2,076,094.24, being an increase over the preceding year of $376,478.28.

246 locomotives received general repairs this year as against 306 in the preceding year, and 404 were given thorough repairs this year as compared with 398 last year.

561 passenger-train cars received medium repairs this year as compared with 459 last year, and 148 were given heavy repairs this year, as against 165 last year.

The average mileage per serviceable locomotive for the year was 27,802.

The average age of locomotives was 12.27 years this year and 12.63 years last year, of revenue freight-train cars 8.93 and 9.49 years for the respective years, and passenger-train cars 14.67 years this year and 15.62 last year.

TRAFFIC EXPENSES.

Traffic expenses amounted to $1,238,439.64 this year, a decrease of $52,338.34, or 4.05%, as compared with last year.

TRANSPORTATION EXPENSES.

Transportation expenses were $22,299,815.12 for the year, a decrease as compared with the previous year of $1,850,224.86, or 7.66%. The reduction in the volume of traffic was, in part, responsible for this decrease; but an important saving was occasioned by the substitution on portions of the main lines of superheater locomotives of greater tractive power, resulting in the movement of heavier trains with but slight increase in the expense. In the freight service the increase in the average tons moved per train mile, including Company's freight, was 7.16%.

A special campaign was carried on in connection with fuel economy, resulting in a decrease of 10.16% in the cost of fuel for locomotives, notwithstanding the larger locomotives in service on some parts of the line and a decrease of only 6.01% in engine miles. Special attention was also given to the elimination, as far as possible, of the causes for loss and damage and other claims, the result being that there was a decrease of 27.48 % in the amounts paid for loss and damage to freight, and of 20.69% in the sums paid for all claims and damages during the year as compared with last year.

GENERAL EXPENSES.

General expenses amounted to $1,603,255.98, a decrease of $15,227.65, or .94%.

TAXES.

The amount of taxes for the year was $3,233,838.38, a decrease of $107,408.69, or 3.21% less than the previous year.

There was a substantial decrease in the amount accruing to the State of Illinois on account of the charter tax owing to the decrease in the revenues on the charter lines during the year as compared with last year. There was also a material decrease in the amount of taxes paid on the non-charter lines in Illinois and on the lines in several of the other states due to reductions in the rates of taxation.

FINANCIAL.

The financial condition of the Company at the close of the year as compared with the previous year is set forth in the general balance sheet, which table, together with Table No. 7 in the full Pamphlet Report, "Long Term Debt and Interest," has been stated in somewhat different form from the previous year. These changes were made in accordance with the form of balance sheet prescribed by the Interstate Commerce Commission to take effect July 1, 1914.

CAPITAL STOCK AND FUNDED DEBT.

There were no changes in the capital stock during the year.

$1,980,000.00 of Illinois Central Equipment Trust Certificates, Series "C," were issued and sold in April 1915.

Illinois Central Railroad Company 4½% Secured Gold Notes, amounting to $10,780,000.00, matured July 1, 1914, and were retired.

Under the terms of the mortgage $2,000,000.00 Illinois Central Railroad Company First Lien Equipment Bonds were delivered to the Trustee and cancelled. An additional $881,000.00 of the same issue of bonds were also turned over to the Trustee for cancellation in connection with the sale to the Yazoo and Mississippi Valley Railroad Company of 105 locomotives released under the mortgage and which were a part of a total of 134 locomotives sold to that company.

There were retired and cancelled under the terms of the respective Trust Agreements $800,000.00 of Illinois Central Equipment Trust Certificates, Series "A," and $350,000.00 of Illinois Central Equipment Trust Certificates, Series "B."

SECURITIES OWNED.

In December 1914 the Chicago, St. Louis and New Orleans Railroad Company issued under the terms of the Trust Agreement $5,700,000.00 of its Equipment Trust Certificates, Series "A." The Illinois Central Railroad Company purchased $700,000.00 of this issue. Of the latter amount $35,000.00 matured and were redeemed in May 1915.

$2,586,000.00 of The Yazoo and Mississippi Valley Railroad Company 5% Gold Improvement Bonds were acquired as follows: In July 1914 from the Trustees of the Western Lines, Omaha Division, and Chicago, St. Louis and New Orleans Railroad Sinking Funds, $852,000.00; in September 1914 from The Yazoo and Mississippi Valley Railroad Company for the purchase price of 134 locomotives sold to that Company, $912,000.00; and in the same month that Company also issued and turned over to the Illinois Central Railroad Company, in liquidation of indebtedness for improvements made to its property, $822,000.00.

$2,500.00 par value of Dubuque and Sioux City Railroad Company capital stock was purchased in November 1914.

$10,000.00 par value of the Central Elevator and Warehouse Company stock was purchased in October 1914.

In addition to the above the Company also acquired $3,600.00 par value of miscellaneous stocks.

The Company sold during the year Illinois Central Railroad Company and Chicago, St. Louis and New Orleans Railroad Company Joint First Refunding Mortgage Bonds as follows: $5,000,000.00 in February 1915, $1,750,000.00 in March 1915, and $3,250,000.00 in April 1915.

There were delivered to the Trustees of the several sinking funds in exchange for The Yazoo and Mississippi Valley Railroad Company 5% Gold Improvement Bonds as above mentioned, $944,000.00 of the Louisville Division, and Terminal 3½% Bonds of 1953.

The Peoria and Pekin Union Railway Company redeemed $12,500.00 par value of its 5% Debenture Bonds, maturing August 1, 1914.

$86,000.00 par value of The Yazoo and Mississippi Valley Railroad Company 5% Gold Improvement Bonds were transferred to the Insurance Fund, and $30,000.00 par value were sold.

$100,800.00 par value Cuban American Sugar Company Preferred stock was sold during the year.

INSURANCE AND OTHER FUNDS.

The changes in the Insurance Fund during the year and the condition of the fund at the close of the year are shown in the following table :—

	Year ending June 30, 1915	Year ending June 30, 1914
Amount at credit of fund July 1	$2,129,835 52	$2,089,844 54
Added through monthly charges to operating expenses	60,000 00	60,000 00
Collected from lessees account of insurance	1,099 92	2,106 68
Interest received on investments of the fund	107,875 00	94,650 00
Fire losses collected	12,604 82	6,941 30
	$2,311,415 26	$2,253,522 52
Losses by fire	$50,711 86	$80,479 61
Premiums paid for reinsurance	45,327 84	43,207 39
	$96,042 70	$123,687 00
Amount at credit of fund June 30 ...	$2,215,372 56	$2,129,835 52

The balances in the sinking funds as of June 30, 1915, and the increases during the year were as follows :—

The Farmers' Loan and Trust Company, Trustee—Cairo Bridge Contingent Fund, $504,180.00.

The Farmers' Loan and Trust Company, Trustee—Cairo Bridge Sinking Fund, $344,580.24, an increase of $32,412.97.

United States Trust Company of New York, Trustee—Sinking Fund for Western Lines Bonds, $1,417,887.73, an increase of $100,294.21.

United States Trust Company of New York, Trustee—Sinking Fund for Omaha Division Bonds, $192,921.50, an increase of $17,076.65.

ROAD AND EQUIPMENT.

There was expended during the year for Road and Equipment (including improvements on subsidiary properties) $10,323,622.76. The following is a classified statement of these expenditures :—

			for Companies.

Trenton and Mendota RR.	
Total	$6,093,901 80

PHYSICAL CHANGES.

Substantial improvements were made in the physical condition of the Company's road and equipment during the year.

Below is a statement as to the more important improvements, the cost of which was charged either wholly or in part to Road and Equipment.

ROADWAY AND STRUCTURES.

During the year 90-pound new steel rail was laid on 262.23 miles of track, and second-hand steel rail was relaid on 62.74 miles, all of which replaced rail of lighter pattern.

Ninety-nine new industrial tracks were built or extended, making a net addition of 7.46 miles after allowing for industrial tracks taken up.

Four hundred and one new Company sidings were built or extended; allowing for tracks taken up there was a net addition for the year of 69.54 miles.

The second main track between Fulton, Ky., and Memphis, Tenn., which was referred to as being in the course of construction in last year's report, was completed.

In order to facilitate the handling of coal traffic a double track connection was installed between the junction of the Carbondale and Johnston City Districts, near Cambria, Ill., the length of track constructed being 1.34 miles.

A cut-off was built from Fredonia, Ill., on the Carbondale District to Reeds Junction, Ill., on the Johnston City Branch, a distance of 1.77 miles. This involved the abandonment as first main track of 6.64 miles of line between Fredonia, Ill., and Carbondale Junction, Ill.

The second main track at Parkway, Ill., was extended to Broadview, Ill., a distance of 2.46 miles, and additional side [illegible] for the purpose of handling passenger traffic to and from Speedway, Ill., the site of the new automobile racecourse a short distance east of Broadview, Ill.

At Paducah, Ky., the freight yard was added to by the construction of 6.28 miles of sidings. The freight yard at Fulton, Ky., was increased 6.59 miles.

The reduction of grades between Paducah, Ky., and Princeton, Ky., and the enlargement of yard facilities at the latter point, were continued and were practically completed at the close of the year.

The elevation of the tracks at Memphis, Tenn., as also the construction of the new passenger facilities at that place, referred to in previous reports, were completed. The raising of tracks and relocating of main line in connection with levee improvements being made by the city authorities in North Memphis, Tenn., were undertaken during the year and are about half completed.

The grade crossing elimination work at Grand Crossing, Chicago, Ill., track elevation work between 79th Street and 116th Street, Chicago, Ill., and through Cicero, Ill., also grade revision at Mattoon, Ill., were still in progress at the close of the year.

The work of strengthening the Cairo Bridge so as to be able to operate heavy locomotives over it was performed during the year.

An interlocking plant was installed at Aulon, Tenn.

A viaduct was completed over Nicholas Street, Omaha, Neb., and an overhead bridge constructed at Monticello, Wis.

Work was undertaken and is still in progress on subways at Prairie Avenue, Decatur, Ill., and Phinney Park Boulevard, Ft. Dodge, Ia.

New station buildings were erected at Grand Crossing, Chicago, Ill., Marion, Ill., Buckner, Ill., Toone, Tenn., and Masonville, Ia. and others are in course of construction at Storm Lake, Ia., and Millwood, Ky. A new freight house was erected at Starkville, Miss.

The freight and passenger station at Winona, Miss., was enlarged and improvements made to the station building at La Salle, Ill.

New water plants were installed at Obion, Tenn., and Dyersburg, Tenn. Water stations were improved at Storm Lake, Ia., Rock Rapids, Ia., Sioux City, Ia., De Koven, Ky., Cecilia, Ky., Fulton, Ky., McComb, Miss., and Crystal Springs, Miss. New steel water tanks of 100,000-gallon capacity, replacing wooden tanks, were installed at Dubuque, Ia., Central City, Ky., and Jackson, Miss.

New mechanical coaling plants were erected at Amboy, Ill., and Jackson, Miss. At Harahan, La., new coal-handling facilities were installed for transferring coal from cars to barges.

New mechanical buildings, consisting of car-repair shed, sand house, six-stall roundhouse, power-house, oil and store house, were erected at Princeton, Ky., and a five-stall roundhouse and machine shop, store and oil house, sand house, and car-repair shop and shelter were built at Jackson, Miss. The plant within the city limits at the latter place was abandoned.

New 85-ft. steel turntables were installed at Princeton, Ky., Dyersburg, Tenn., Nonconnah Yard, Memphis, Tenn., and Jackson, Miss. A second-hand 66-ft. turntable was put in at Kenner, La.

One hundred and sixty-two miles of electric automatic block signals were constructed at various points and placed in operation. There were 1,262.4 miles of protected track at the close of the year.

Electric block signals are being installed between Branch Junction and Centralia, Ill., 4 miles; Marine to Glen Carbon, Ill., 13.7 miles; Coleman to Plato Centre, Ill., 11.5 miles; and Mona to Benson, Ia., 10.7 miles; a total of 39.9 miles.

6,063 lineal feet of permanent bridges and trestles were constructed replacing timber and pile bridges, trestles, and embankments.

1,501 lineal feet of permanent bridges and trestles were rebuilt or replaced by embankments.

29,402 lineal feet of timber and pile bridges or trestles were rebuilt or replaced by embankments.

EQUIPMENT.

Fifty Mikado type freight locomotives and 25 switching locomotives were added during the year, and 68 locomotives were disposed of, resulting in an increase of seven locomotives, and an increase in tractive power of all locomotives as compared with the previous year of 1,181.65 tons.

One hundred and one passenger-train cars were acquired and 13 were sold, destroyed, or transferred to other service, making a net increase of 88 cars.

Nine thousand three hundred and thirty-two freight-train cars were added during the year; 6,419 were new cars, and 2,913 were cars purchased from the Central Fruit Despatch; 4,916 cars were sold, destroyed, or transferred to work service, leaving a net increase of 4,416 cars. The average capacity of cars owned at the close of the year was 41.46 tons, as compared with 41.52 tons last year. The total capacity of cars was 2,647,730 tons this year and 2,467,995 tons last year.

GENERAL REMARKS.

Your Company during the past year has suffered from the depression in business prevalent throughout the country, and this has been most pronounced on the lines south of the Ohio River.

The crops in the territory served by your Company's lines were generally good; but the practical discontinuance of lumber exports and the general depression in the building trades seriously affected the lumber business; this, together with the low price received by cotton-growers for their product, not only affected the revenue your Company received from the transportation of lumber, but also, in connection with both commodities, had a depressing effect on the revenues from the transportation of general merchandise and on passenger travel.

The substantial amounts expended by your Company during the past few years in additional facilities, as well as in the upkeep of existing tracks and structures, together with the acquisition of a large number of new locomotives of increased tractive power and cars of greater capacity than those formerly in service, enabled your Company to curtail its expenses in line with the decrease in revenue. As a result, while the total railway operating revenues decreased 6.54 per cent., the ratio of railway operating expenses to railway operating revenues was 77.10% this year, as against 77.08% the previous year.

Under date of December 1, 1914, an equipment trust, known as the "Chicago, St. Louis and New Orleans Equipment Trust, Series "A.," was made in the amount of $5,700,000.00 with which to provide funds, in part, for the acquisition of 72 locomotives and 6,500 freight cars. The Illinois Central Railroad Company guaranteed the payment of the trust certificates and entered into an agreement with the Chicago, St. Louis and New Orleans Railroad Company under which your Company became the sub-lessee of the equipment covered by the lease. Under date of April 1, 1915, the Illinois Central Railroad Company issued $1,930,000.00 of equipment trust certificates known as "Illinois Central Equipment Trust, Series C" for the purpose of paying, in part, for 75 locomotives and 1,000 refrigerator cars. The equipment covered by both of these trusts was received and placed in service during the year.

The Company had 10,963 stockholders of record as of June 30, 1915, as compared with 10,840 on the same date last year.

There were 489 pensioners on the pay rolls at the close of the year. The amount of pensions paid during the year was $129,269.33, an increase of $9,843.42 over the previous years.

The Board takes this opportunity of expressing its appreciation to the officers and employees for their loyal and efficient services during the past year.

By order of the Board of Directors,

C. H. MARKHAM, *President.*

"Moody's Analyses of Investments." Part II. Public Utilities and Industrials. By John Moody. This is a bulky volume containing a comparative analysis of public utility and industrial companies in the United States and Canada, with investment ratings, enabling the banker and investor to ascertain the true values of securities. The price is £3, and copies can be obtained from Messrs. F. C. Mathieson and Sons, 16 Copthall Avenue, E.C. Every subscriber to the book will receive, without extra charge, all through the year a monthly supplement containing latest earnings of all companies reporting.

"Valuations." By Samuel Skrimshire, F.S.I. Price 10*s*. 6*d*. (London: E. and F. N. Spon.)

"Food Economy in War Time." By T. B. Wood, M.A., and F. G. Hopkins, M.A., F.R.C.P., &c. Price 6*d*. (Cambridge University Press.)

With this week's number *The Syren and Shipping* attains its thousandth issue. In honour of the event the proprietors have issued a special double number containing articles from the pens of Mr. Lloyd George, Lord Cowdray, Lord Devonport, Sir Walter Runciman, the Lord Mayor of London, and 45 other eminent public men

SOUTHERN RAILWAY COMPANY.

TWENTY-FIRST ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

Richmond, Va., October 12, 1915.

To the Stockholders of Southern Railway Company:

The Board of Directors submits the following report of the affairs of the Company for the year ended June 30, 1915:—

It has been a difficult year. After a period of unexampled prosperity throughout the South, attended by growth and expansion in all forms of industry, business had begun to slow up during the early months of 1914. Although for this reason railway revenues were less during the first six months of 1914 than they had been during the peak load of the corresponding six months of the previous year, nevertheless, the Company entered upon the fiscal year now under review with an actually large traffic and a large turnover of revenue. The flame of war which burst forth all over Europe at the beginning of August, 1914, had a sudden and withering effect upon industry in the South. Preparing to market the largest crop in the history of cotton growing in the United States, the Southern people were looking forward to the profits from the sale of this, their chief staple, as a stimulus to their purchasing power and so of every form of industry in which they were engaged. When overnight they were apparently shut out by the war from the European market, which has always consumed a large part of the American cotton crop, the people of the South were thrown back upon their own resources with a disturbingly large proportion of their chief money crop on their hands and an inadequate market price in prospect. Despite several futile plans of assistance from without, the South practically suspended for a time its industrial activities. The result was a fall, as vertiginous as that of the price of cotton, in the revenues of the railways of the South, and this lean diet was protracted, with the condition which caused it, throughout the year now under review. For this Company the suddenly changed industrial situation of the South meant a loss in revenues for the fiscal year of $8,551,487 22, or 12.09%. The development of the loss was precipitous. July showed a small increase in revenue, August a decrease of 1.20%, September a decrease of 8.33%, while in October, November, December and January the decreases in revenue were, respectively, 18.47%, 20.06%, 19.97%, and 18.93%, with gradually improving conditions during the remainder of the fiscal year, as the South again caught its breath.

It was a situation which demanded radical action on the part of management. When the first symptoms of the loss of revenue were felt plans of retrenchment were made and were thereafter applied progressively. This action could not be brought into full effect for several months, but the effort became both evident and effective in March 1915. The result for the year was a reduction of expenses amounting to $5,585,938 68, and a balance of income over all charges of $1,523,369 32, as compared with the similar balance (but in that case after provision for a dividend) of $2,047,776 69 were carried to the credit of profit and loss at the end of the previous fiscal year. These results and the financial condition of the Company at the close of the year will appear in greater detail by reference to the Income Statement and the General Balance Sheet (given on subsequent pages), as well as the other tables which are part of this report

DIVIDENDS.

One of the unhappy results of the year has been the necessity, once again, of suspending dividends on the Preferred stock. The regular dividend was amply earned for the six months ended June 30, 1914, but consideration of it, coming before the Board in September, was postponed until it should be apparent what was the tendency of the financial condition of the Company in the crisis which had then developed. Later the Board, being confident that the Company's affairs were well in hand, declared a reduced dividend of 2% (making 4½% for the year ended June 30, 1914), but conservatively made it payable in five-year scrip bearing interest at the rate of 4% per annum. No dividend for the current fiscal year was declared, or could be justified during a period of convalescence.

OPERATING CONDITIONS.

The characteristic of operating conditions during the year under review has been retrenchment, both by reducing service and by the practice of greater efficiency. What has been accomplished in both these respects will appear in detail in the subsequent pages of this report. It will suffice here to point out the parallel between the conditions of this year with those of the year ended June 30, 1908. That was the year of the financial panic of 1907. The revenues of the Company were at the high tide of its history up to that time until October 1907, when they fell rapidly and dangerously throughout the remainder of that fiscal year. Then, as during this year, the problem of management was retrenchment, severe and sustained retrenchment, during several months. Attention was called in the annual report for 1908 to what was then done. What is, perhaps, as significant an illustration as can be made of the contemporary tendency of the railway industry, as well as of the increased strength of the Company to-day, as compared with 1908, is found in a comparison of what had to be done and was done then and this year. In considering these comparisons it should be remembered that because of decreases of 1.74% in the average receipts per ton mile, 7.35% in the average receipts per passenger mile, and 9.33% in mail revenues per mile of road, the 1915 revenues are $2,145,093 less than they would have been had the 1908 averages been maintained on the revenue side of the account, while, on the other hand, operating expenses for 1915 carry an increase of approximately $3,881,418 more than those for 1908, due to increased wage scales; therefore, the operations for 1915 were burdened with unavoidable decreases in revenues and increases in expenses approximating together the large sum of $6,026,511. In a comparison of actual results in the two years, 1915 has thus been handicapped to the extent of over six million dollars, which had to be overcome before increased efficiency could be observed. Under these conditions, the causes of which are too well known to all students of contemporary economics in the United States to require explanation here, the hope of the railway industry is that aggregate revenues may increase progressively in greater ratio than aggregate costs. Fortunately for this Company the conditions making for a continued rapid development of the South, despite temporary setbacks as in this year and in 1908, have realised as well as promise such a result; while the intelligent expenditure of new capital for improvement of the plant in the interest of facility, and so of economy, of operation must in the future, as in the past, be made to check, if it cannot altogether control, an abnormal increment of operating costs. A few statistics of 1915, compared with those of 1908, will serve to make the point, viz:—

SOME OPERATING COMPARISONS, 1915-1908.

		Per Mile of Road.	Per Train Mile.
		%	%
Gross Revenues	Inc.	23.06	24.54
Net Revenues	Inc.	29.08	31.35
Revenue Train Miles	Inc.	1.31	-
Maintenance of Way and Structures Expenses	Inc.	26.14	27.48
Maintenance of Equipment Expenses	Inc.	25.05	26.00
Transportation Expenses	Inc.	14.51	16.03
Ton Miles All Freight	Inc.	58.73	67.59
Ton Miles Revenue Freight	Inc.	28.55	57.90
Freight Train Miles	Dec.	18.98	
Freight Train Revenue	Inc.	26.10	55.85
Passenger Train Miles	Inc.	16.15	
Passenger Train Revenue	Dec.	17.09	.78
Revenue from Passengers	Inc.	20.31	5.59
Taxes	Inc.	7.80	

Transportation costs per dollar of revenue were 36.59 cents, or 6.97% less than in 1908. Freight enginemen, trainmen and fuel costs per 100 ton miles decreased 27.29%. Passenger enginemen, trainmen and fuel costs per 100 passenger miles increased 7.76%.

Freight locomotive fuel costs per 100 ton miles decreased 37.19%, and pounds of coal consumed per 100 ton miles were 36.93% less in 1915 than in 1908. While the average cost of coal at coaling stations was the same for both years, the average handling cost at stations was 35.71% less in 1915 than it was in 1908.

Overtime per dollar of wages was 5.20 cents in 1908; in 1915 it was 1.64 cents, an improvement of 68.46%.

Adjusting the 1915 revenues and expenses to the average receipts per ton and per passenger mile, and mail revenue and wage costs to the averages and scales which prevailed in 1908, the following comparisons are found:—

	1915.	1908.	Inc. or Dec. %
Cost Expend. $1.00 of Gross Revenue	65.75c.	75.53c.	Dec. 12.97
Transportation Costs per $1.00 of Revenue	31.09c.	39.53c.	Dec. 19.65
Transportation Costs per Train Mile	66.28c.	63.95c.	Inc. 3.67

The increased train mile fuel cost per train mile fuel cost are due to the [illegible] train loadings, as illustrated by the following figures:—

Enginemen, Trainmen and Fuel Costs Freight

Per Train Mile	50.12c.	55.57c.	Dec. 9.74
Per 100 Ton Miles	7.88c.	14.62c.	Dec. 46.10

MAINTENANCE.

The obvious and easy method of retrenchment on a railroad, in an emergency, is to reduce unduly the appropriations for upkeep of property. During the past year the management has steadfastly sought to avoid this temptation. Public announcement was made that retrenchment was necessary and that it was the policy of the Company to reduce its expenses at the cost of the temporary convenience of the people of the South before reducing maintenance of the railroad to the point of endangering their safety. The public accepted this announcement in good part and it has been due to the co-operation of the State Railroad Commissions and of responsible and enlightened citizens everywhere that the Company was enabled to reduce its passenger service more nearly to the rquirements of current passenger traffic than it had been for several years past. This large item of retrenchment made it possible to spend on upkeep all that was

necessary for the preservation of the integrity of the property. When to this policy was added the splendid response to the emergency by the officers and men charged with maintenance, it resulted that it was possible to say at the close of the year, as it is to-day, that the physical condition of the roadway and structures is better than ever it has been; that the motive power and passenger equipment are in good condition and fully up to normal, and that the only deferred maintenance has been in freight car equipment, where upkeep could economically be deferred because without traffic freight cars must stand idle in any event.

An evidence of the justice of this claim as to the physical condition of the property, as well as of the skilful and careful service of the officers and men immediately charged with the movement of trains, is found in the marked reduction of the number of personal injuries during the year, and the interesting fact that the Company carried this year more than sixteen and a half million passengers, a number equal to the population of the territory served, without fatality in a train accident to more than a single passenger, and he would not have suffered had he not been riding on a car platform in contravention of the rules made for the protection of passengers.

There was, of course, a substantial reduction in maintenance costs, as in other costs, as part of the policy of retrenchment, but, considering only those items of such costs as are included in operating expenses, the total decrease of maintenance costs was 10.61%, compared with a decrease of 12.09% in revenues. For each dollar of revenue earned there was spent in maintenance 30.78 cents in 1915 compared with 30.27 cents in 1914.

GENERAL EXPENSES.

There were substantial reductions during the year in all the normal items of general expenses, but by reason of a charge to this account during the year of $98,191 32, representing the cost to this Company of the preparation prescribed to it for the pending Federal valuation of its property, the total of general expenses is greater this year than last. This statement is made not in criticism of the valuation expense, but in justice to the loyal officers, who, by their sacrifice, made possible the reduction of one of the principal normal items of the account known as General Expenses.

CHARACTERISTICS OF TRAFFIC DURING A YEAR OF DEPRESSION.

FREIGHT.

The effect on the Company's freight business of the conditions which have obtained during the year is expressed in a decrease of 3,754,044 tons of commercial freight.

This decrease was chiefly in manufactures and in raw materials, the principal items being :—

	Tons
Bituminous coal and coke	1,163,189
Manufactures and miscellaneous	1,151,122
Forest products	939,687

These decreases reflect curtailment of industrial and building operations and economies practised by the people of the South during a period of business depression.

The decrease in manufactures and miscellaneous includes approximately 500,000 tons of fertilizer and fertilizer material, and this decease is directly attributable to the war.

The war in Europe, by narrowing the market for cotton while broadening the demand for many other farm products, has given great impetus to the movement which was already under way for the broader diversification of Southern agriculture. With relatively a small reduction in cotton acreage, the South is now producing a much larger proportion of the grains, forage crops and meat and dairy products that it consumes. While one of the effects of this is to reduce the tonnage of agricultural products carried into the South, it is adding to the economic strength of the section, and the consequent increased purchasing power of its rural population may be expected, under normal business conditions, to result in the increased carriage of all classes of commodities except agricultural products, while the reduced movement of agricultural products into the South will be, in a measure, compensated for by an increased movement of these products between Southern points and from the South to outside markets. This change in the character of the Company's traffic is already noticeable. Thus during the year there was no decrease in the tonnage of agricultural products as a whole, viz. :—

	1915. Tons	1914. Tons
Grain	655,515	756,215
Hay	159,602	169,702
Leaf Tobacco	169,126	158,919
Cotton	744,579	725,859
Cotton Seed	559,734	541,599
Melons	65,684	59,468
Citrus Fruits	60,557	53,686
Other Fruits and Vegetables	291,558	250,582
Peanuts	20,450	24,179
	2,507,812	2,507,289

The maximum grain tonnage handled by the Company in any one year was in 1906-1907, namely 1,012,692 tons. The tonnage for the year just closed represents a shrinkage from this maximum of 35%, and reflects the effort of the Southern farmer to feed himself and emerge from a condition of dependence upon the grain fields of the West. Coincident with this economic change, the South is increasing other classes of agricultural products which find market largely outside the territory of production. Comparing the same years (1906-1907 with 1914-1915) the Company's tonnage of melons, fruits and vegetables increased more than 100%. So that, while rapidly approaching the time when the South will produce grain sufficient to feed itself, and probably have some to sell, the South is now producing fruits and vegetables to feed many of its neighbours as well as itself.

The cotton crop was the largest on record, but there was a decrease in exports in excess of 800,000 bales, yet the Company's tonnage of cotton was not appreciably less than during the previous year, the difference being approximately 5,000 bales, and this was more than compensated for by an increase in tonnage of cotton seed and its products of 168,282 tons, due to a large crop and to a strengthened position with relation to the seed-crushing industry. It is interesting to note that, compared with 1906-1907, the tonnage of cotton seed and its products for the year just closed represents an increase of 168%.

The South has had but a small part in the business of supplying munitions of war for the armies in Europe, but in the latter months of the year the Company handled a substantial movement of horses from the West and Southwest destined to the battlefields. In all some 20,000 horses were so transported for export. Special arrangements were made for the prompt and comfortable movement of these unfortunate animals, and, by preventing loss and damage in transit, this business was profitable to the Company.

The South enters the new year with a much more hopeful outlook, which, it is fairly expected, will be reflected in freight revenues.

PASSENGER.

For the past 20 years, up to the third week in July 1914, the passenger revenues of the Company have shown increases, month after month, over corresponding periods of the previous years, except during the period December 1907 to April 1909, when decreased passenger revenues resulted from a passenger fare reduction in the States of Virginia, North Carolina, Georgia and Alabama, along with a general depression in business during the latter part of the year 1907 and the first part of the year 1908.

Since the third week in July 1914 passenger revenues have shown decreases ranging from 2.05% to 34.02%, the greatest decrease occurring during the second week in May 1915, since when the passenger revenues have improved.

The increased use of automobiles, especially for short distance travel, is the only permanent cause contributing to a reduction of railway passenger travel in the South. The use of automobiles has largely increased owing to the great reduction in the cost of the automobile and the material improvement of the highways throughout the Southern territory. The short distance travel is principally affected by the automobile competition, and while it costs more to travel by automobile than it does by train, the automobile affords a convenience of time to which no local railway schedules can be adjusted.

The travel on the Southern Railway is of two kinds, local and competitive. Approximately 70% is local, short distance travel between non-competitive stations, and 30% long distance travel between points where other lines compete.

The local travel, approximately 70% of the total, will increase with the agricultural and manufacturing development of the country, but during times of business depression this short distance local travel is more affected than is the through travel. The farm labourer, as well as the factory employee, travels for the most part for pleasure, and as soon as his wages are affected he quits travelling. The farmer, particularly in the cotton sections, has discontinued during the past year his old-established custom of advancing money to labourers above their actual requirements for living necessities.

The long distance competitive travel in the Southern territory is susceptible of great development, and as train service improves, as the result of double track and other physical facilities, revenues from long distance passenger travel may be expected materially to increase. While the travel from the North and the East to Southern resorts during the winter seasons increases each year, the travel of the Southern people to the mountain resorts of the Carolinas and Virginia and to the resorts in the Northern States increases to a greater extent, and will continue to increase with the prosperity of the Southern people. The mountain sections of Western North Carolina grow more popular, and each year attract a larger number of people for their summer vacations. The importance of this is shown by the fact that the months of July, August and September yield the Company's largest passenger revenues. But the principal development and improvement in through long-distance travel may be expected to come from increased travel of business men between the Southern business communities and the Eastern and Northern commercial and banking centres. The people of the South are given to much travelling, and as their incomes, both from manufacturing industries and from farming developments, improve, that much more will they travel for business and for pleasure.

INDUSTRIAL AND AGRICULTURAL DEVELOPMENT OF THE TERRITORY SERVED.

MANUFACTURING.

Although industrial development was restricted by the prevailing business depression, the ground swell of the prosperity prevailing in the South prior to the war in Europe carried over into this year a substantial addition to the manufacturing plants established on this Company's lines. While

less than in former years, the record is an earnest of what may be expected in the future. The new industrial plants on the Company's lines completed during the year numbered 519 and may be classified as follows :—

Brick, Tile, &c	19
Cotton-Seed Products	17
Fertilizers	7
Flour and Feed	54
Furniture	12
Iron Products	17
Lumber	57
Stone (mineral)	38
Textile	24
Woodworking	47
Miscellaneous	197
Total	519

The capital involved in these new industries is $17,492,850. During the year there were additions made to 219 manufacturing establishments at a reported cost of $8,162,047. Industries reported under construction June 30, 1915, were 57 in number with a capital of $15,456,250. New buildings of all kinds (except those used in manufacturing) and other general improvements represented an expenditure of $66,422,856.

AGRICULTURE.

The September 1, 1915, estimates of the United States Department of Agriculture show increases this year over the 1914 yields of sundry crops, other than cotton, in the Southern States as follows :—

Corn	160,341,000 bushels
Wheat	6,162,000 ,,
Oats	14,253,000 ,,
Irish Potatoes	13,544,000 ,,
Sweet Potatoes	6,705,000 ,,
Hay	1,227,000 tons
Tobacco	97,923,000 pounds

The South may, this year, well quote Virgil's verse : "Gargara is astonished at her own fertility."

In these figures, as well as in the development of the cattle industry, hereafter referred to, lies a promise of an enduring, because a self-contained, prosperity in the South; they indicate, as has already been suggested, that our section may expect in the future to provide the bulk of its own food supplies, with some surplus of such commodities for sale; while it will maintain its leading position as the source of one of the principal staples upon which civilised man depends to clothe himself.

The Company has continued active co-operation with the State and Federal Governments, agricultural colleges and Southern farmers for the advancement of Southern agriculture. A preliminary report of the Agricultural Division of the Company's Industrial and Agricultural Department shows a total of 18,172 acres being cultivated in accordance with the advice of our field agents, embracing 7,882 acres in corn, 3,570 acres in cotton, and 6,720 acres in miscellaneous crops. These figures do not by any means measure the work being done, as they embrace only those fields or parts of fields in which farmers agree to follow the advice of our agricultural field agents. Much larger areas are cultivated substantially in accordance with this advice, and the good results of the agricultural uplift work being done by the Company, and, of course, by the State and Federal Governments, as well as by other intelligent agencies, public and private, are noticeable in almost every agricultural community on the Company's lines. In 1914 the average yields of both cotton and corn per acre on fields in which the advice of the Company's agents was followed were more than double the average yields obtained on similar lands in the same localities where this advice was not followed, and as good results may be expected in 1915 when the figures are available.

The agricultural agent reports 313,000 fruit and nut trees planted during the year.

The live stock industry is making rapid progress in all of the territory contiguous to the Southern Railway. The numbers of beef and dairy cattle and hogs are rapidly increasing and their quality is being improved through the introduction of pure-bred animals. The live stock agent of the Company reports the location of 1,468 pure-bred cattle along the Company's lines during the year, the construction of 1,475 silos, and the organisation of 30 live stock associations. The climate of the South and the large range of forage crops that can be produced are exceptionally favourable to all kinds of live stock, and the United States Department of Agriculture has demonstrated that beef and pork can be produced cheaper in the South than in other parts of the United States. The only obstacle to the development of the beef and dairy industries has been the cattle tick which carries the germ of Texas fever. The agricultural agents of the Company are co-operating with State and Federal agencies in the eradication of this insect. Large areas along the Company's lines have already been released from the cattle tick quarantine and large additional areas will be released in the autumn of this year.

GOOD ROADS.

Recognising the importance of good country highways to the development of the territory traversed by its lines, the Company has at all times co-operated with the Office of Public Roads in the United States Department of Agriculture and other organisations engaged in the promotion of the good roads improvement. The latest figures for road construction are those for the calendar year 1914, which show that during that year there were approximately 5,400 miles of improved roads built in counties traversed by Southern Railway lines, and that in the same year those counties issued bonds for road construction aggregating $5,000,000. The total length of improved country highways in those counties at the end of the calendar year was approximately 50,000 miles.

LATIN-AMERICAN TRADE.

One of the interesting developments of the public service of a private corporation which looks forward, as does this Company, is its educational activities. Attention has been called to the notable work of this kind in behalf of better agriculture. Another work, germane to that in agriculture, has been the stimulation of the people of the South to take advantage of current opportunities for a mutually profitable trade with Latin America. While this Company's South American Agency has been in operation only a short time, it has already laid the foundation of a foreign trade which is entirely new to many manufacturers in the South, and, while the beginnings are necessarily small, they contain the germ of what can become an important factor in the industrial activities of the South and so in the revenues of this Company. One interesting result of this movement is that fifteen thousand school children are now studying Spanish in the schools of the South as a direct result of recommendations to educational authorities by the South American Agency.

THE ADDITIONS TO CAPITAL ACCOUNT AND TO PROPERTY INVESTMENT.

In the matter of additions and betterments the policy of the Company is better railroad, not more railroad. All suggestions of buying or building new railroads into new territory have been laid aside and, in justice to the urgent demands of the existing property in the interests of economy of operation and convenience of the public served, cannot be properly considered at this time.

The Company has been fortunate in its ability to continue and to push forward, during this year of depression, the additions to its plant which will be necessary, before they can be completed, to handle the traffic of the industrial South. The capital for this work was provided during 1914, and its disbursement during the current year, when most other construction work had been suspended in the South, has not only enabled the Company to get more for a dollar invested than ever before, but has contributed substantially to the welfare of many Southern communities, which were refreshed, when they most needed refreshment, by the flow of our money through all the arteries of the commercial body. In this connection special attention is called to the table (page 45, pamphlet report), included for the first time in this report, which sets forth the use and application of all the bonds issued by the Company since its organisation.

During the year the investment in road and equipment increased $11,021.684.56, of which $9.004,934.79 was in roadway and structures, and $2.016.749.77 was in equipment. This increase represents net additions made during the year. (See pages 36 and 37, pamphlet report.)

There was an increase of $1,551,000 in mortgage and collateral trust bonds and miscellaneous obligations, and a decrease of $3,193.000 in equipment trust obligations. (See pages 42 and 43, pamphlet report.)

First Consolidated Mortgage 5% bonds in the total amount of $7,136,000 were sold and the proceeds applied as follows : On July 1, 1914, $2,414,000 to redeem a like amount of matured Western North Carolina 6% bonds; in December 1914, $4,722,000 to redeem a like amount of Richmond and Danville 6% bonds. These transactions resulted in no increase in the funded debt, while the difference in the interest rates borne by the old bonds and the new means a reduction of $71,360 in the annual interest charges.

There were drawn and taken into the treasury $456,000 Development and General Mortgage 4% bonds, representing in part the equipment trust obligations paid during the year and charged to property investment account.

The total amount of Development and General Mortgage 4% bonds available for disposition on June 30, 1915, was $32.579.000, of which $16,667.000 are pledged as collateral under Southern Railway Three-Year 5% Collateral Trust Indenture, dated March 2, 1914, leaving $15,912,000 of such bonds in the treasury.

DOUBLE TRACK.

The double track construction work on the main line north of Charlotte, N.C., carrying with it improved alignment and elimination of heavy grades, has gone forward rapidly on 100 miles of the 142 miles of main line between Washington and Charlotte operated as single track at the beginning of the past fiscal year. Of this mileage, 27 miles, between Pelham and Brown Summit, N.C., were in operation as double track at the close of the year, and it is expected that all of the remaining 73 miles upon which work is now under way will be completed before April 1916. There were 434.03 miles of double track in operation at the close of the year.

Since the close of the fiscal year there has been made available for the provision of double track and other improvements on the main line between Charlotte, N.C., and Atlanta, Ga., the sum of $3,500,000 through the sale of First Mortgage Thirty-Year 5% (Series B) Gold bonds of The Atlanta and Charlotte Air Line Railway Company. The work in immediate contemplation consists of the 56 miles between Spartanburg and Central, S. C., and the 23 miles between New Holland and Cornelia, Ga.

SEPARATION OF GRADE CROSSINGS.

One of the difficulties of [illegible] grade crossings [illegible] These crossings, which [illegible] were usually [illegible] by the early [illegible], have [illegible] the growth of population, a menace to the public, and cause, in deplorable accidents [illegible] drain, and this Company is alive to the advantage of separating [illegible] when, the community recognises its share in the responsibility [illegible] much can be done, has been done, and will continue to be done on our lines. Moreover, on all revision of line undertaken in connection with the policy of constructing double track, this Company has separated important and busy grade crossings wherever physically practicable, and not prevented by [illegible] 100 miles of the main line on which double track has been under construction, 54 out of 73 dangerous grade crossings were eliminated, and this policy will be continued. The [illegible] is, however, an unfortunate assurance that for many years more reliance must be placed, for the prevention of accidents at grade crossings, upon human care than upon physical elimination of risk. This is one of the most serious problems in the south, as in other parts of the United States.

YARDS AND TERMINALS.

In addition to the terminal yards at Richmond, Va., at Spencer and Weston, N. C., at Meridian and at Forest (near Birmingham), Ala., and at Forrest (near Memphis), Tenn., mentioned last year, work upon other important terminal improvements progressed during the past year, including a new yard at Denverside (near East St. Louis), Ill., new facilities for both passenger and freight traffic at Spartanburg, S. C., and the separation of busy grade crossings in several cities. Since the close of the year the modern export coal terminal at Charleston, S. C., has been put into operation. Arrangements have been made to provide a union passenger station at Macon, Ga., to meet the long-continued and insistent demand for improved passenger traffic facilities in that city. New passing, side and spur tracks aggregating 89.27 miles, were constructed.

AUTOMATIC ELECTRIC BLOCK SIGNALS.

These signals were placed in operation on the 130.3 miles of double track between Amherst and Whittle, Va., Danville, Va., and Pelham, N. C., Atlanta and New Holland, Ga., Austell and Howell, Ga., Knoxville and Morristown, Tenn., and Ooltewah and Citico, Tenn. It is the policy [illegible] the year.

SERVICE OF EMPLOYEES.

There has never been a year of the Company's history in which the stockholders have had as much reason for pride in and appreciation of the officers and employees, their work, their spirit, their loyal self-sacrifice. The manner in which a grave emergency was met and dealt with illustrates at its best that discipline which distinguishes a true organisation from a mere co-operative society. Our organisation, which has in recent years been built and cemented by a strict adherence to the principle of promotion for merit and reliance upon men made on the road, who have faithfully stood by during all our vicissitudes, has proven in this year of need the greatest of the Company's assets, for it has fought a losing fight and won.

ACCOUNTS AND STATISTICS.

Statements of the accounts and statistics of the Company in detail will be found in the tables hereto annexed.

The accounts have been examined, as usual, by independent auditors and accountants, Messrs. Patterson, Teele & [illegible]

Appended to this report is a minute of the resolution adopted by the board upon being advised of the death of Alexander Boyd Andrews, for many years a director and first Vice-President of the Company, who died at his home in Raleigh, North Carolina, on April 17, 1915.

Respectfully submitted, by order of the board,
FAIRFAX HARRISON, *President.*

TABLE I.—INCOME STATEMENT FOR YEAR ENDED JUNE 30, 1915, COMPARED WITH JUNE 30, 1914.

1914			1915	
		OPERATING REVENUES—

ALABAMA GREAT SOUTHERN RAILROAD.

THIRTY-EIGHTH ANNUAL REPORT—FOR THE YEAR TO JUNE 30, 1915.

BIRMINGHAM, ALA., October 6, 1915.

To the Stockholders of the
Alabama Great Southern Railroad Company:

The board of directors submits the following report of the affairs of the Company for the fiscal year ended June 30, 1915:—

INCOME STATEMENT.

	1915.	1914.	Inc. or Dec
Miles of road operated	329.41	309.04	—
	$	$	$
Total operating revenues	4,776,629 89	5,426,175 09	−649,545 20
Total operating expenses	3,653,733 63	4,269,410 67	−615,677 04
Net operating revenue	1,122,896 26	1,156,764 42	− 33,868 16
Taxes	177,929 98	189,856 61	− 11,926 63
Uncollectible railway revenue	703 46	—	+ 703 46
Operating income	944,262 82	966,907 81	− 22,644 99
Non-operating income	239,467 79	371,974 05	−132,506 26
Total gross income	1,183,730 61	1,338,881 86	−155,151 25
Deductions from income	217,030 41	230,362 46	− 13,332 05
Total available income	966,700 20	1,108,519 40	−141,819 20
Int. on funded debt and equipment trust obligations	340,525 95	351,332 55	− 10,806 60
Balance of income over charges	626,174 25	757,186 85	−131,012 60
Dividends on Preferred Stock—3 % in Feb., 1914, 3 % in Aug., 1914, 3 % in Feb., 1915, and reserve for 3 % in Aug., 1915	202,821 00	202,821 00	—
Balance carr. to credit of profit & loss	423,353 25	554,365 85	−131,012 60

THE INCOME ACCOUNT.

The reason for the reduction of $649,545.20 (equivalent to 11.97%) in the total operating revenues is found in the loss of traffic, both freight and passenger, caused by the slowing up of business in the territory served, and the economies forced upon its people, which accompanied the disturbance of markets and prices for important commodities of that territory following the commencement of the European War. The comparative income statement (Table 1, page 10 of pamphlet report) shows the part played by each kind of traffic in this loss in revenue.

Operating expenses were reduced by $615,677.04 (equivalent to 14.42%), leaving a loss of only $33,868.16 (2.93%) in net operating revenue, although the amount available for fixed charges, dividends and surplus shows a decrease of $141,819.20, because of smaller receipts of per diem rental for freight cars and reductions in other items of non-operating income. The balance of income over fixed charges is $626,174.25, or $131,012.60 less than in the preceding year, a reduction of $10,806.60 in interest on funded debt and equipment trust obligations being due to the payment of equipment trust obligations which matured during the year. The decrease of $11,926.63 in taxes is the result of a smaller Corporation income tax payment consequent upon reduced earnings.

DIVIDENDS.

The usual dividends, totalling 6%, declared out of income for the year, were paid on the Preferred stock. Dividends totalling 5%, the same as for the preceding year, were declared and paid on the Ordinary stock. The balance of income for the year carried to the credit of the profit and loss account exceeded by $31,853.25 the Ordinary stock dividend requirements.

OPERATING EXPENSES.

Operating expenses required 76.49 cents of each dollar of revenue against 78.63 cents in the preceding year, the reduction of 2.19 cents in the operating ratio being made in spite of the substantial decrease in gross revenues. This result was accomplished only by retrenchment in every class of expenses.

Transportation expenses decreased $149,534.42 (or 8.11%). A saving in this item is in every sense real, and it is disappointing that two particular causes beyond the control of management should have operated to prevent a much greater reduction, viz., the heavy [illegible] movement of empty foreign line freight cars which is an accompaniment of business depression, and the [illegible] by tornadoes on September 29, 1914, at Kinston, Alabama. With a decrease of 5.9 [illegible] the train mileage, the freight train mileage was reduced 10.13%.

Maintenance of way and structures expenses decreased $173,319.02 or 19.99%. The satisfactory [illegible] cut in this item is found in the good physical condition of the property, which made it possible to reduce materially the appropriations for this purpose during a time of depleted revenues without affecting the safety or efficiency of operation. New cross ties laid totalled 159,2[illegible], an average of 517 per main line mile. New 85-lb. steel rail laid totalled 3,744 tons, equivalent to 28 miles. The ballast requirements were much lower than in the previous year, as the main line track had been fully ballasted. Necessary repairs to buildings and structures were made, including the renewal of several bridges and the rebuilding of the coaling station at Attalla, Ala.

Maintenance of equipment expenses decreased $269,519.96 (or 18.99%). The preceding year was a period of unusually liberal appropriations for the maintenance and improvement of rolling stock, and a comparison with the three fiscal years ended June 30, 1913, shows an average annual expenditure for this item less by $63,583.98 than during the past year. A substantial portion of the reduction shown, when compared with the previous year, reflects a real saving because of the reduced locomotive, passenger car and loaded freight car mileage. While there has been an increase in the number of freight cars awaiting repairs, the equipment required for handling the reduced volume of traffic has been maintained in good condition for service, it being the policy of the management to avoid a sacrifice of operating efficiency through a too severe retrenchment in maintenance outlays.

Traffic expenses and general expenses were reduced 3.80% and 5.64% respectively.

The details of operating expenses are shown in Table 8, pages 18 and 19 of pamphlet report.

CAPITAL ACCOUNTS.

The increase of $914,517.94 in property investment in road is mainly the result of the provision of second main track and automatic signals. The decrease of $7,537.89 in property investment in equipment represents the excess of the book value of equipment retired from service over the value of new equipment acquired. The details are stated in Table 4, page 14 of pamphlet report.

The decrease of $385,402.80 in long term debt represents the amount of equipment trust obligations which matured and were paid during the year. (See Table 6, page 16 of pamphlet report.)

ADDITIONAL FACILITIES.

Double track mileage in service at the close of the year totalled 22.9 miles, the work having been first commenced and completed between those points where it is most needed—viz.:

	Miles.
York, Ala., to Toomsuba, Miss.	14.5
Russell, Miss., to Meridian, Miss.	5.9
Eleventh St., Birmingham, to West End, Ala.	2.5

The Wauhatchie Extension Railway, being the extension of the Company's main line from the northern terminus at Wauthatchie, Tennessee, 2.97 miles to a connection with the Lookout Mountain line of Southern Railway Company leading to the terminal facilities in Chattanooga, is nearing completion.

There were constructed 5.09 miles of new passing and side tracks.

Automatic electric block signals now protect train operations on the [illegible] between Chattanooga and Meridian, the work of installation having been completed early in the past fiscal year.

The additions to equipment, as well as a statement of the equipment retired, are shown in Table 4, page 14 of pamphlet report. Steel underframes were applied to five wooden passenger cars, and thirty wooden freight-train cars were equipped with steel centre sills.

The [illegible] strengthened by the addition of several new machine-tools.

BUSINESS CONDITIONS AND TRAFFIC.

While the reduction in revenue through the loss of traffic available for transportation over the lines of your Company during the past year has been heavy, and the conditions of [illegible] products of the territory served which have acted as a deterrent to business activities and travel and made for the depression to which the loss has been due still exist, it is believed that the effect of these conditions can be only temporary, and those entrusted with the management of your [illegible] return of normal business. It is gratifying to note that [illegible] come to [illegible] United States.

ACCOUNTS AND STATISTICS.

The accounts of the Company have been audited by Messrs. Price, Waterhouse and Co., independent accountants, and their certificate is included in this report.

[illegible] found in the tables which follow.

It has been the sad duty of the board to record the death, which occurred at his home in Raleigh, North Carolina, on April 17, 1915, of Alexander Boyd Andrews, for many years a director and first vice president of your Company.

The board expresses to the officers and employees its appreciation of the faithful discharge of their duties during the year.

Respectfully submitted, by order of the Board.

FAIRFAX HARRISON, *President*.

MEETINGS
OF PUBLIC COMPANIES.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LTD.

THE twenty third ordinary general meeting was held at Winchester House, E.C., on October 27, Mr. James Jackson presiding.

The Chairman, after expressing regret at the absence of Mr. Hegan through indisposition, said: It is a matter of great satisfaction to the board and I am sure it will be to the shareholders, that the report presented to you clearly shows that, in spite of unprecedented conditions and many difficulties, the business of the Bank has been successfully maintained and that the Bank enjoys an exceptionally strong position. It is true the profits and the carry-over show a slight diminution compared with the figures of 1914, but this reduction, quite inside War calculations, is attributable to the drought which was so acutely felt in so many districts of Australia. But for this the earnings would have exceeded those of the previous year. As it is, they are sufficient, after appropriating £35,000 and the statutory £15,000 to the reserve fund and £2,500 to the officers' guarantee and provident fund, to fully justify the same rate of dividend as usual. The majority of the entries in the balance sheet show no material alteration from the corresponding ones of last year. On the asset side, the advances and other assets at £6,079,185 are, roughly, 6% lower than in 1914, which is far more than counterbalanced by cash and bullion, cash at bankers, and investments, which, showing an aggregate of £3,551,436 in liquid resources, provide 10*s.* in the £ against the liability on current accounts and deposits combined, and of no less than 21*s.* 4*d.* per pound on current account [illegible] figures which indicate a financial strength corresponding with the exceptional requirements of the times. Bank premises show a reduction of £15,076, mainly by the crediting of the sum realised by the purchase of Deferred [illegible] stock under the provisions of the articles of association. The figure now stands at £284,953, and those who, like myself, have had the opportunity of inspecting the great majority of the Bank's buildings throughout the Commonwealth know what an ample value stands behind this figure. The increase of nearly £182,000 in investments is accounted for mainly by subscriptions to the War Loans. The directors are confident that they correctly interpret the wishes of the shareholders in following the patriotic policy of making their contributions to the War Loans as liberal as is consistent with the limits of safety to the Bank. Of the liabilities figures, the only noticeable changes are that the reserve fund, at £365,000, is increased by the appropriation last year of £50,000, and that there is an increase of roughly 9%, amounting to £282,885, in current accounts, reflecting, as might be expected under the circumstances, curtailed business activity throughout the Commonwealth. In the profit and loss account charges show, at £180,813, an increase of nearly £18,000. Of this no less than £12,500 is represented by augmented income and land taxes at home and abroad. Of course, it is scarcely to be expected that this can be otherwise than an increasing charge for the coming year, and possibly for some years to come. The serious effects of the drought, which, happily, is now ended, over the greater area of the Commonwealth have been rather lost sight of in view of other more portentous events, but when it is remembered that the reduction it caused in the production of wheat alone represents a loss of about £15,000,000 as compared with the yield of the previous year, it will be recognised how widespread the evil has been. The drought and war conditions combined have without doubt been greatly prejudicial to the trade and commerce of the Commonwealth, and have naturally interfered with the imports and exports of Australia, with a corresponding influence on the course of exchange. Taking into consideration the unparalleled and adverse conditions to which I have alluded, I think it will be agreed that the Bank has done remarkably well. With regard to the future, in the absence of some unexpected cataclysm or upheaval, I think we are justified in having confidence in the continued prosperity of the Bank.

The report and accounts were unanimously adopted.

A. AND F. PEARS, LIMITED.

THE twenty-third ordinary general meeting was held on October 26 at the Holborn Restaurant, W.C., Sir Thomas R. Dewar (Chairman and Managing Director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen, The balance sheet which you have before you, your directors trust you find satisfactory. After paying Debenture and Preference shareholders as usual, the Preferred Ordinary shares receive 12%, and the newly-formed Ordinary shares receive 20%. Our investments have been increased by £100,000, and, what is of equal importance, as shown by the official Stock Exchange quotations at September 30 last, our securities were then [illegible] more than they are put at in our accounts. This satisfactory result is owing to the re-adjustment of our securities made when the working arrangement with Messrs. Lever Bros. was completed. We have placed £10,000 to reserve. Creditors could be paid by the debtors more than three times over. Then £30,003 4*s.* 10*d.* is carried forward, and is sufficient to pay Debenture interest, Preference and Preferred Ordinary dividends for the next six months. In the interests of shareholders, a reserve against depreciation of stocks has been created. Also £40,000 War Loan stock has been acquired by the Company. Had it not been for the War our profits would have been considerably larger, because you can readily understand our sales on the Continent have been paralysed, and raw material has increased in price.

A Phenomenal Success.

You may ask the reason of the sound position we find ourselves in. The abnormal times have nothing to do with it, but the contrary. We have benefited by no war profits, although there are no shareholders, I know, who would more willingly pay same over to the Government had such a liability been incurred. A year ago a new policy was adopted, and it has been a phenomenal success. A reorganisation of our system of distribution was established, broadening the field for new channels, and laying a foundation for the future, the development of which should in time, I think, show satisfactory results. This development could never have been accomplished if you had not agreed to our present arrangement with Messrs. Lever Bros. You have to be congratulated upon having consented to that agreement; in fact, it is the opinion of your directors that had you not done so the then Ordinary shareholders would not have had the same dividend as the previous year, and we would not have liked to prophesy when a similar dividend could have been paid if we had continued to work on our old policy. We now find ourselves safe in the zone of a well-organised system of commercial activity, where a large volume of business makes economies possible, thus increasing legitimate profits, whilst allowing the public to get the better value, the employees better pay, merchants a good selling profit, and shareholders respectable dividends. It is my opinion, from practical experience, that the methods of this union could not be more just or generous to our shareholders, to the public, to our customers, and to our employees. This perfect organisation, evolved after years of experience with practical men of business, working in unison to economise and give the public the best service, is worthy of our emulation. We shall bring before you for your acceptance at a later date a profit-sharing scheme for our employees, to encourage them and allow them to benefit by our prosperity. It will be upon a somewhat similar basis to that which is so successfully carried out at Port Sunlight, adapted, of course, to our own requirements. I have to say, on behalf of my colleagues on this board and myself, that it gives us infinite pleasure to work with Sir William Lever and his colleagues, and all those who work under their directions. He and they have always shown a genuine consideration and a most liberal spirit to our employees and all classes of our shareholders in this Company.

New Articles Placed on the Market.

Already we have placed upon the market, through the channels which we now have, and could never have had under any other circumstances at home and abroad, new articles which have been received well by merchants and the public. We expect very soon to be sending from our works every article requisite for the most refined toilet table, from soap and perfumery to bath-salts, all made only from the very finest materials, artistically got up and bearing the hall-mark of the name of Pears as an assurance of the best British manufacture. We shall be quite prepared for any onslaught of foreign competitors in the future, with or without a protective tariff. It is with profound regret that I have to mention the death, four months ago, of our much-respected director, Mr. Edward Byas. He served assiduously at the meetings of this Company from its inception. We are at present extending our works at Isleworth, and have enlarged our offices at New Oxford Street to cope with our increased trade. We have raised the [illegible] of our workers, and have also granted [illegible] loans. I predict under our present policy, when all the properties at the old [illegible] are of Pears are developed, together with all the great variety of [illegible] now [illegible] and as an example of [illegible] British enterprise, whose [illegible] and trade laid in the eighteenth century, as strong and as vigorous after its century and a quarter of active life and as much in its youthful advance

ment as the twentieth century can produce, and that of our products it can be truly said: "Age cannot wither, nor custom stale."

Mr. Retallick seconded the motion, which was carried unanimously.

CENTRAL ARGENTINE RAILWAY, LIMITED.

THE ordinary general meeting was held on October 28 at River Plate House, Finsbury Circus, E.C., Sir Joseph White-Todd, Bart. (Chairman of the Company), presiding.

The Chairman said that they were still under the cloud of a terrible war, and since they last met its scope had extended to other nations. Its effects were reflected on neutrals as well as on belligerent States, and its influence, as far as credit and development were concerned, was very discernible in countries as remote from the scene of conflict as Argentina and other States in the Southern Hemisphere. He wished to congratulate the shareholders on the results which had been submitted. Eliminating from the net revenue account the amount of £440,000 brought in from last year and the special allocation of £100,000 to contingencies fund to meet abnormal flood charges during the year, the net result of the year's working showed that, notwithstanding the increase in their interest charges of £50,000 on the terminable notes issued in November 1914 and April 1915, and of £50,000 as Debenture interest, the dividends of 5% on the Ordinary and Deferred stocks of the Company had been amply earned. They carried forward within £95,000 of the amount brought in from last account, in spite of decreased gross receipts of £300,000 for the year, of which no less than £240,000 was due to diminished passenger traffic. The results obtained were in a great measure directly due to the efforts of their officials, but they must not lose sight of the marvellous potentialities of the country in which the railway operated, a country which, in these times of mundial crisis, was yet able to demonstrate that the considerable capital which the shareholders had confided to it still continued to give a fair return on the investment. They had no intention of offering further capital during the continuance of the War. In regard to the new capital works in hand, the electrification of suburban lines, as far as at present undertaken, should be ready for inauguration during 1915. The new Gorton workshops were progressing favourably, and the terminal station in Cordoba was being proceeded with satisfactorily.

The New Terminus.

The first part of their new Retiro terminus in Buenos Aires was officially opened on August 2 last. Their railway had already 3,300 miles in operation, and doubtless in time it would attain 5,000 miles, and that terminus was to deal with the traffic at the present time and in the reasonably near future. The lay-out had been designed to allow for future extensions, and the Company already possessed the necessary land for that purpose. The station, while being the largest in South America, was so up-to-date that they looked not only for increased business, but for considerable economies in the handling of goods and transportation of passengers. Referring to the 10% increase in most of the rates and tariffs put in force on October 1 by the majority of the companies operating out there—which was only done after close friendly conference with the National Government—he said that there, as here, the cost of everything had risen, and, as under a sentence of the Supreme Court—to their minds an unwarranted one under the very clear terms of the Mitre Law—they were now, under protest, paying certain municipal taxes, they officially notified the Government and the public of their intention to raise rates, which they had ample power to do, seeing that they were still a considerable way from attaining that percentage of profit which would enable the Government to intervene in the fixing of their tariffs. Furthermore, there had been indications of a socialistic tendency in recent legislation, which, if carried into practical effect, might be reflected on the revenues of the railway. In regard to the present year's outlook, the Chairman read the following cable which had been received from the local committee, dated the 26th instant:—"Present agricultural prospects in general are satisfactory. The area sown with cereals is greater than last year and the growing crops have been much benefited by recent rains. Locusts, however, have appeared in considerable numbers, and, although the pest is being vigorously dealt with, the ultimate yield of wheat and linseed may be affected. We estimate 650,000 tons of cereals from last harvest awaiting transport." Their aggregate receipts to the 23rd instant of £1,866,000 showed an increase over those of the corresponding period of last year of no less than £230,000, and that, when taken in conjunction with the figure carried forward, gave them, for a third of the present financial year, the substantial sum of £575,800 to the good. The Chairman concluded by moving the adoption of the report.

Mr. Campbell P. Ogilvie seconded the motion, which was carried unanimously.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

THE ordinary general meeting was held on October 27 at River Plate House, Finsbury Circus, E.C., Mr. David Simson, M.Inst.C.E. (the Chairman), presiding.

The Chairman said: The results for the year would have been better than they were had it not been that the War came on the top of nearly two very bad financial years for Argentina, with the result that the country had become impoverished, and the sudden stoppage of credit made the strictest economy the order of the day, and, in consequence, people imported much less foreign goods than usual. They also travelled less, especially first-class, so that in the two items of general goods and passengers alone they had a decrease of £436,500 over the previous year and £781,300 over the year ended June 30, 1913, this notwithstanding the fact that they had an increase in the receipts from wheat and oats of some 20 per cent. With regard to the increases, it was pleasant to note an increase of £43,700 for loose wool, and he hoped that they would have a similar increase for the current year, as the prices of wool were so high at present that every pound of it would be sent to market. The increase in wheat was foreseen, though it was a little disappointing after the high hopes they had of it this time last year, but this was partly explained by the fact that it came to port more slowly than usual. The most disappointing crop was oats. Though the tonnage carried was some 20% over last year the receipts were 8% less owing to a larger proportion of it going to Bahia Blanca than in the previous year, instead of to Buenos Ayres, and the consequent shorter haul. The maize crop was also a great disappointment. The live stock traffic showed slightly better results as a whole than last year. The Manager and his officers had effected a reduction in working expenses of £213,355 during the year, which followed on top of a reduction of £498,903 in the previous year. The capital expenditure during the year amounted to only £584,760, as compared with £1,638,797 in the previous year, and had it not been for unavoidable commitments of previous years for rolling-stock and lands, the amount of capital expenditure during the year would have been reduced still further by at least £200,000. There had been a substantial increase in their gross receipts from July 1 to date. It was the working expenses that constituted the principal element of uncertainty in the situation, and unfortunately in a direction entirely beyond their control. He referred to the high cost of fuel ruling at present, due mainly to the enormous rise in sea freights. He concluded by moving the adoption of the report and accounts.

Sir Henry Bell, Bart., seconded the motion, which was carried unanimously.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

THE twenty-sixth ordinary general meeting was held on October 26 at River Plate House, E.C., Sir Henry Bell, Bart. (the Chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of the year's working, while disappointing to the shareholders, were doubly so to the directors, for they knew how very good the prospects were until the excessive rains set in, which spoiled what otherwise would have been a splendid year, and their chagrin was increased by thinking how important to the Allies a bumper harvest would have been this year. In regard to the report, finance and economy were the important things everyone was now studying, and the directors had gone most thoroughly into that matter. The gross receipts for the year amounted to £2,522,682, and the working expenses to £1,505,284, giving them net receipts of £1,017,398. After adding rentals, interest, &c., and the balance brought forward, and deducting the fixed charges and other payments, there was a balance of £260,515, to which they proposed to add £160,000 from the general reserve fund, making in all £420,515, and out of that amount they recommended a balance dividend of 3%, less tax, on the Ordinary stock, leaving £53,911 to the carried forward. It was to enable them to pay 5% for the year that they had transferred £160,000 to net revenue from the general reserve fund. The working expenses showed an increase of £17,532. The shareholders would, no doubt, be surprised that fuel had actually cost less by £10,000 than in the previous year; that was owing to their beginning the year with an ample stock of cheap coal. He was afraid, however, that the fuel bill would show a different result in the current year, owing to the high freights ruling. As regarded the future, the latest official publications of the Argentine Republic gave satisfactory evidence of the development of that country. As regarded their own Company, it would be seen that they had cash in the bank and in hand in London £674,691, and cash in the bank and in hand at Buenos Aires £57,600, bills receivable £770,000, remittances in transit £80,000, and annuities accrued, which were as good as cash, £35,966—a total of £1,618,257, all liquid assets of the highest class. When they added to that their reserve and renewal funds

of over £1,700,000 it would be seen that the Company was in a financial position which very few companies could show. In addition to that, since October 1 the Company had been collecting an increase of 10% on some of their principal goods tariffs and on their long-distance first-class passenger fares.

The Chairman added that the Company's traffics for last week showed an increase of £13,000, and were now £124,000 in excess of those for the corresponding period of last year.

Sir J. White-Todd, Bart., seconded the motion, which was carried unanimously.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED.

THE ordinary general meeting was held on October 26 at River Plate House, E.C., Mr. Frank Henderson (Chairman of the Company) presiding.

The Chairman said that the Central Uruguay group of railways were worked as one system, and consequently his comments on last year's working applied generally not only to the parent line, but to the Northern and Eastern extensions also. The past year had proved a very unsatisfactory one for the Company, and their misfortunes were directly due to two principal factors, namely, the failure of the wheat crop and the utter stagnation in trade and commercial affairs in Uruguay. The failure of the wheat crop might be attributed to the inclement weather experienced, especially during the first half of the year, and, as regarded the commercial depression, while it was true that the River Plate countries had been suffering from financial stress for a long time, the outbreak of the European war had effectually prevented a recovery which might, under more favourable circumstances, have taken place. The gross earnings of the main line were £575,298, as against £650,997 in the previous year, being a decrease of £75,699, and the working expenses were £354,805, or £28,563 less than last year, the ratio of expenses to earnings being 61.67%, as against 58.89% for the year ended June 30, 1914. The gross earnings of the combined system were £946,767, compared with £1,103,229 for the previous year, a decrease of £156,462, and the expenditure £562,684, as against £622,727, or a decrease of £60,043. Altogether the earnings from the goods traffic on the combined system were down to the extent of £121,256, or 22%, but, on the other hand, owing to the enormous European demand for frozen meat, a larger number of cattle were [illegible] this source of traffic was shown. There was a considerable reduction also in the receipts from passenger traffic. As regarded the working expenses, a saving of £28,562 in the case of the main line and £60,043 in the combined system had been effected, the ratio of expenses to receipts being 61.67% and 59.43% respectively. Their coal bill for the current year [illegible] likely to be greatly increased. In this connection, however, he was pleased to say that they had succeeded in keeping up their stocks of fuel, and he could only express the hope that the high rate of freight now ruling would take a favourable turn before long. Notwithstanding the adverse conditions and the trying period through which the country was passing, there were signs of some improvement in the state of affairs in Uruguay. There had been a great demand for cattle for freezing purposes, and the high prices realised had been unprecedented. Consequently, many of the "estancieros" had done well, and but for the shortage of sheep their profits would have been still greater. Other products, such as wool, hides, and skins, had also realised high prices, and, as expenditure on imported goods had greatly decreased, it would be seen that the country generally must be the gainer, and, consequently, be gradually strengthening its financial position. The Company's relations with the Government had never been more cordial, and they had contracted with the authorities to construct a small branch from Sayago, the junction of the eastern sections, with the main line to the "Tablada," or cattle market. The profit for the year had only slightly exceeded the fixed and other charges, including the dividend on the 5½% Preference shares. In view of that, and the fact that they were indebted to their bankers for a considerable sum, and having regard to the uncertainty as to the future, the board considered that, in the interests of the Company, it would be most unwise to attempt to pay a dividend on the Ordinary stock. They therefore recommended that the balance of £57,922, which included the sum of £54,131 brought in from the previous year, be carried forward. The directors earnestly hoped that the current year would show considerable improvement compared with the results now submitted, and in that connection he might say that the gross earnings of the combined system from July 1 to the 16th instant amounted to £270,497, as against £211,171, an increase of £59,326, equal to 28%. He concluded by moving the adoption of the report and accounts.

Sir Henry Bell, Bart., seconded the motion, which was carried unanimously, and the retiring director and auditors were re-elected.

BALDWINS, LIMITED.

THE thirteenth annual general meeting of the members of the above-named Company was held at the Grand Hotel, Birmingham, on October 28. Colonel J. Roper Wright (Chairman) presided, and the other directors present were: Mr. Stanley Baldwin, M.P. (Vice-Chairman), Mr. Roger Beck, Mr. S. L. Dore, Mr. John C. Davies, and Mr. E. L. Evan-Thomas.

The Chairman: I have to apologise for the absence of Colonel Charles Wright and Colonel Williams, and Mr. Vassar-Smith. The first two are engaged on military duties, and Mr. Vassar-Smith has got such engagements connected with Government work that he cannot be here. Now, it is usual to accept as read the notice convening the meeting, the directors' report and statement of accounts and balance sheet for the year ending last June. May I ask if you will accept them as read?

Agreed.

The Accounts.

The Chairman: Well, now, gentlemen, it is with pleasure your directors place before you their report showing the results of our last year's workings. You will see by the accounts the balance we are able to carry to the balance sheet is £21,010 more than last year, but £48,570 less than the year before, after meeting the heavier charges for income tax and adding a further £15,000 to the depreciation account, which now stands at the round figure of £250,000. After paying the usual dividends, sinking funds, and placing to reserve £50,000, bringing this figure up to £325,000, we have left £127,982, from which we recommend a final dividend of 7½%, making with the interim dividend 10%, free of income tax. I think we may consider this a satisfactory result for the year. I may add we have dealt liberally with the claims of our men on War service, numbering 1,057, of whom, I grieve to say, eight have fallen, and with the various funds for the defence of the country.

Interest in the Port Talbot Steel Works.

In accordance with the resolutions passed at our extraordinary meetings of May 12 and 27 last we have, as shown in our report, taken over the whole of the outstanding shares of the Port Talbot Steel Company, Limited, which, we feel sure, will be a valuable asset to the Company. We had hoped to have been able to announce at this meeting that we had commenced the erection of the intended blast-furnace plant, with its accessories in the way of coking and by-product plant for the extraction of dyes, &c., which hitherto has been one of the chief sources of income for the German industries, and the principal source of British requirements. But the War has stopped all this for the time being.

Helping the Government.

I am glad to say that we are doing all we can to keep up the supply of steel for shell making, for which we are laying down special plant at great outlay and inconvenience to our usual trade, and to which we are giving our whole-hearted attention; and I am sure you will ratify the decision of your directors in handing over to the Minister of Munitions one of our large engineering shops, free of charge, for the manufacture of high-explosive shells, which are now being produced. I think I ought to say that it is the intention of your directors to take a financial interest in the United Tube Corporation for the manufacture of the larger calibre of the high-explosive shells and other Government and trade requirements so urgently wanted, and for which there is a great demand. Your steelworks are exactly suitable for the production of this particular steel, which would be a useful adjunct to your Company. I think, gentlemen, I have given you a fair *résumé* of our position. I will endeavour to answer any questions, which, considering the unsettled state of all industries, will, I hope, be few, as it is, to my mind, dangerous to make forecasts of any sort. I now move: "That the statement of accounts, balance sheet, and the directors' and auditors' reports thereon be entered on the minutes, and that the same, together with the payment of the Preference dividend up to and including August 1, 1915, and of the interim dividend on the Ordinary shares paid on April 7, 1915, and other acts of the directors as thereby disclosed, be approved and adopted."

The Vice-Chairman: I have much pleasure in seconding that.

The resolution was put to the meeting, and carried unanimously.

The Dividends.

The Chairman: I now move "That, in accordance with the directors' recommendation, a final dividend of 7½%, free of income tax, be paid on the amounts paid up on the Ordinary shares for the half-year ending June 30, 1915, making, with the interim dividend of 2½% paid on April 7, 1915, 10% for the year, free of income tax, and that the same be payable this day."

Mr. Roger Beck: I have much pleasure in seconding that. Resolution carried unanimously.

The Chairman: I now move that Mr. Richard Vassar-Smith and Mr. E. L. Evan-Thomas, retiring under Article 87, be and are hereby re-elected directors of the Company.

Mr. J. C. Davies: I beg to second that. Resolution carried unanimously.

The Chairman: I now move that the retiring directors, Mr. Roger Beck and Colonel D. E. Williams, be and are hereby re-elected directors of the Company.

Mr. S. L. Dore: I second. Resolution carried unanimously.

Mr. Roger Beck: I thank you very much, Mr. Chairman and gentlemen. On examination I find I have thanked you in this way for seven years consecutively, and I may say I am now the veteran of the board.

Mr. Dorsett: I beg to move "That Messrs. Turquand, Youngs and Company be re-elected auditors of the Company for the current year, at a fee of £525."

Mr. Lambert: I second the resolution. Resolution carried unanimously.

Vote of Thanks to Chairman and Directors.

Mr. C. E. Martineau: I think we ought to pass a vote of thanks to the Chairman and directors for their arduous work during the past year, and to Colonel Wright for his conduct of the meeting. I am sure we are all glad to see him so well and so vigorous again after the severe illness he went through about a year ago.

Alderman Sayer: I beg to second the vote. It is a compliment to the directors that so few shareholders are present. The balance sheet is such an excellent one and such a solid one that it must give satisfaction to the whole of the shareholders. Resolution carried unanimously.

The Chairman: On behalf of the directors, I thank you for the confidence expressed in your resolution. May I, on behalf of the directors and the shareholders, thank the staff for their excellent work during the year. We have been well backed up by a staff second to none in the country.

FRASER AND CHALMERS, LIMITED.

THE annual general meeting was held on October 28 at Winchester House, Old Broad Street, E.C., Mr. A. W. Tait, Chairman of the Company, presiding.

The Chairman said, in the course of his address: The net profit, after providing for all expenses and depreciation, was £12,058, as compared with £8,377 for the previous year and £4,604 for the year to June 30, 1913. The progress shown last year has been maintained, and progress has been recorded during a particularly difficult time. The trading has been affected by the War, and difficulties have been experienced in obtaining supplies of raw materials and in maintaining a sufficient labour force. Although the turnover in value was approximately the same as the previous year, in tonnage it was considerably less, the levelling up in money value being largely the necessary result of increased cost of manufacture. The progress in the manufacture and sale of steam turbines and turbo-blowers last year has been fully maintained, and the results from this department show an improvement, and there is every promise that it should continue to grow in importance. The orders in the coal conveying and coal handling department have been very satisfactory, and we are carrying out substantial orders for the French Government and in South Africa and China. This in the near future should be one of the principal departments. A certain amount of business has been secured in Bettington boilers, and inquiries are under consideration, although they may have to be deferred owing to the present regulations which exist for controlled establishments. Considerable progress has been made in the manufacture of dredges, and we have had decided encouragement in the experience of the construction of the last three dredges built. This year we were offered further orders, but, owing to the necessity of providing for Government and other war work, these had to be refused. This is unfortunate, as it will no doubt increase the competition in this class of manufacture when we are again in the market. The business in South Africa has shown some improvement, accounted for by the increase in the demands which sprung up shortly after the outbreak of war for many stamp mill and other supplies, in view of the danger of a shortage and the cutting-off of supplies from Germany. Owing to the pressure of the demand we have had to place some of our orders in the United States, but we hope that in time this position will adjust itself. The progress in these results is after making deductions for South African income tax, which is a new item of expense. The trading in Australia and in Canada shows a falling off, but this was to be looked for in view of the financial conditions ruling in these Colonies. Certain new business has been secured in Australia, and the satisfactory crops in Canada should improve conditions there in the near future. The remaining departments do not call for special comment, except that during the year the Company appointed a representative to look after its interests in Russia. He has established himself in Petrograd and the ground is being prepared for future work. The only other matter I need mention is the erection of a new and larger power station at the works at Erith to meet special conditions. The Company has entered into a contract for a limited period for the supply of electric power to Vickers' works. There has also been a certain amount of expenditure during the year on plant, machinery

and tools to increase the efficiency of manufacture, but this is an expenditure which is always necessary. The concentration at Erith of the sales departments and general accountancy with the manufacturing end of the business has proved a great advantage. Dealing with the balance sheet the Chairman said: Reserve account at June 30 stood at £62,096. The Company has during the year spent a considerable sum in fixed plant and machinery, and the directors considered it advisable to transfer from the profit and loss account the sum of £17,903 to compensate for this, thereby increasing the amount to the credit of reserve account to £80,000. After this transfer has been made from profit and loss account, and the balance of profit for the year added thereto, we get a balance of £13,132, which, after deduction of the dividend on the Preference share capital paid on July 24 last, leaves £8,407, which the directors recommend should be carried forward. The works of the Company were declared [illegible] under the Munitions of War Act, 1915, on August 2 last. All orders and instructions from the Government must receive precedence over any other work, and in consequence there is considerable difficulty in maintaining certain branches of the Company's business, which no doubt will make it somewhat difficult to restore the balance when normal conditions are resumed. The works are at present fully occupied, and, provided there is no extraordinary change in the situation during the next few months, there is reason to hope that the results for the current year should be as favourable, if not more so, as the [illegible]. I move that the report and accounts for the year to June 30, 1915, be received and adopted.

The resolution was unanimously adopted.

HOPE BROTHERS, LIMITED.

THE fifteenth annual general meeting was held on October 27 at Cannon Street Hotel, E.C., Mr. T. E. Goodyear (Chairman of the Company) presiding.

The Chairman said: In presenting the adoption of the report and accounts I feel justified in expressing satisfaction at the result of the year's trading, having regard to the abnormal conditions under which we have carried on the business. I suppose that no retail businesses have felt more acutely the effects of the war than those dealing in mens wear. Thousands of our customers have been taken from their ordinary occupations, and many of them, I regret, will never return. The lighting regulations, too, have practically reduced our hours of business. Both these conditions have affected the sales at the whole of our branches, and, in addition, our London branches have suffered owing to the absence of visitors from America and the Continent. On the manufacturing side, we have had to contend with the rise in prices and the difficulty in obtaining certain classes of goods for which we depend on Continental sources of supply; and the question of transport in obtaining goods from the manufacturers and in supplying goods to our numerous branches has been a matter of extreme difficulty, delays of weeks having occurred where in normal times we could rely upon the delivery of goods within a few hours, or at most a day or two. The falling off in our regular trade has been in some measure compensated, especially in the earlier portion of the year, by contracts which we were able to obtain for the supply of clothing to the troops, but these naturally have been at a low rate of profit and have only partially replaced the loss of our ordinary customers. I mentioned last year that we had arranged to remodel our branches at Leeds and at [illegible] Road, but that we had deferred for a short time the execution of the work. We considered it prudent to proceed with the alterations at Leeds, and these have now been completed, and have enabled us to sublet a portion of the premises. This has effected a considerable improvement at that branch, and will, in our opinion, be very beneficial to the Company. We shall take in hand the alterations at Bishop's Road at as early a date as possible. Since the close of the year we have acquired premises in a very desirable position in Bradford, and have opened a small branch there, which gives every indication of proving thoroughly satisfactory. Our balance sheet shows [illegible] reduction of £12,500, and the cash an increase of £9,500. The increase of £5,000 in the sundry debtors is a temporary matter, and was due to certain contracts which we had on hand at the date of closing the accounts, and which have since been paid. Our trade, as you know, is conducted on a cash basis, and the debtors chiefly represent work in hand that is paid on delivery or very shortly afterwards. In view of all the circumstances I feel justified in proposing a dividend on the Ordinary shares at the rate of 4% per annum. As regards the future, it is impossible under present conditions to prophesy what may be the result of next year's trading. It is, I think, evident that the difficulties of the past year will not be lessened while the war lasts, and, having regard to the improved organisation of the supply departments of the War Office, I do not think we can rely in the future upon obtaining so much contract work as we did in the early months of the War. I think it possible, therefore, that when the time comes to consider the payment of interim dividend in the spring, we may consider it necessary to defer a decision with regard to the dividend on the Ordinary shares until the result of the year's work can be ascertained. This, however, is a matter for future consideration, and at present I will content myself with proposing that the report and accounts now submitted be adopted and the dividend recommended be declared.

Mr. W. W. Greenslade (Deputy-Chairman) seconded the motion, which was unanimously adopted.

MONTEVIDEO TELEPHONE COMPANY, LIMITED.

THE twenty-seventh ordinary general meeting was held on October 27 at Winchester House, E.C., Mr. Charles Lock (Chairman of the Company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the purchase price of the property was brought into the accounts at the commencement of the year at £180,000, and during the year under review capital outlay to the amount of £5,945 had been added to that item. The capital outlay was slightly less than in the previous year, as they had not had to expend quite so much on new connections. Stores stood at £6,789, against £11,400, while sundry debtors did not show any important variation. Investments at cost stood at £49,289, as against £41,452 in the previous year. During the year they had had considerable remittances from the other side, and the directors had taken advantage of those remittances to increase their investments by taking up good-class Treasury notes and by investing in the War Loan. He would like to point out that, with their investments at £49,000 and their cash, together with bills receivable, at £21,700, they had liquid assets, realisable and available at short notice, of about £71,000. That was against an issued capital of £159,000, and he thought that the Company was, therefore, in an exceptionally strong position. He would further point out that that summary of their financial position took no account of the real estate, which appeared in the balance sheet at £22,000, and of the stores at Monte Video and the sundry debtors. There was a small diminution in the sundry creditors, as compared with last year, and the reserve for renewal of plant, &c., stood at £40,130, as against £35,500.

They had to admit a slight diminution in the profit and loss account as compared with last year, but it would be remembered that a diminution was foreshadowed when he addressed the shareholders at the previous meeting of the Company. He was very glad, however, that business of late in the Uruguayan Republic was looking up, and their last reports were to the effect that subscribers were increasing. The net result of the whole year's operations was that they had secured a net profit of £25,776. That would enable them to make the same appropriations for dividend purposes as they had done for the past seven or eight years, and

THE UNION TRUST COMPANY, Ltd.

Inquiries Invited.

Advisory Committee: CHAS. H. HOARE, Esq. (Chairman), THE LORD HINDLIP, MAJOR J. C. BRINTON, D.S.O., T. WILLES CHITTY, Esq.

London Office - - - - 75 LOMBARD STREET, E.C.

G. COCKBURN, Manager. Bankers: Messrs. Hoare.

would also enable them to make very substantial appropriations to depreciation and reserve for the renewal of plant. Those appropriations were not quite as large as in the previous year. They applied for the year under review £8,000 to depreciation account, as against £9,500, and they placed to reserve for renewal of plant £9,000, as against £9,500. They carried forward £5,394, as against £5,303 brought in. Shareholders would be pleased to hear that the new switchboard had fulfilled all expectations, and had thoroughly justified the advice of Sir John Gavey.

Mr. J. G. Le Marchant seconded the motion, which was carried unanimously.

TOMBOY GOLD MINES, LIMITED.

The annual meeting was held on October 22 at Winchester House, E.C., Lord Arthur Butler (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The accounts now submitted show a profit for the year of £79,705. Adding to this the net balance brought forward from the last balance sheet, £47,792, the directors have had at their disposal a total sum of £127,497. This amount has been applied as follows:—Two dividends have been paid (both free of income tax), one of 2*s.* per share on December 30, 1914, and the other of 1*s.* per share on June 30 last, together absorbing £46,500. A sum of £49,485 has been written off plant and machinery, made up of £31,486, the equivalent of the amount expended on additions during the year, and £18,000, representing roundly the amount of profits standing to credit of profit and loss account, but not available for distribution. The sum of £2,732 4*s.* 9*d.* shown in the last balance sheet as representing the Company's investment in the Tomboy Tramway and Tunnel Company has also been written off, and this item disappears from the balance sheet, while the sum of £8,000 has been set aside to provide for income tax, paid and reserved. These various appropriations together amount to £106,718, leaving £20,778 to be carried forward. The cash in hand at the end of June, in London and America, £38,326 10*s.* 2*d.*, consisted of £15,531 15*s.* 2*d.* in London and £22,794 15*s.* in America. Of the London cash £9,732 2*s.* 6d. represented dividend warrants not then presented for payment, leaving actual cash available £5,799 12*s.* 8*d.* The cash in America represents the usual balance required to meet liabilities at the mine, and these account for £15,291 0*s.* 9*d.* for stores, wages, and American taxes out of the sum of £21,937 3*s.* 2*d.* appearing in the balance sheet as "sundry creditors and credit balances." Turning now to our milling operations, we have treated 145,857 tons of ore, 8,401 tons more than last year. The average yield has been $7.05 per ton, against $6.98, but this increase has been a little more than offset by an increase in costs of 9 cents per ton.

Large Increase in Ore Reserves.

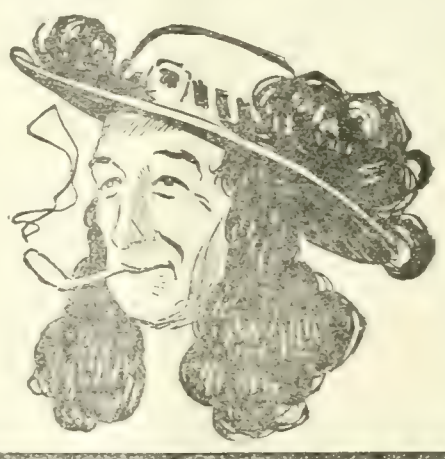
In the year ended June 13, 1913, the reserves were estimated at 426,000 tons; last year they had increased to 452,000 tons; while during the period which I am reviewing they rose to 535,000 tons. Seeing that during the same period 145,857 tons were milled, it follows that we have developed ore during the twelvemonth amounting to 228,857 tons, which is a highly satisfactory result. The Tomboy mine has grown into a big property, and will doubtless continue to expand.

Purchase of New Property.

I am glad to be able to tell you that since the report was issued we have had the definite offer on favourable terms of the "Sidney White Cloud" group of claims, situated to the north of our Bushwhacker claim, and carrying the extension of our Montana vein. Both our General Manager, Mr. D. A. Herron, and our Consulting Engineer in America, Mr. P. L. Foster, strongly recommended the purchase, and, acting on their advice, the board has accepted the offer. The titles are being examined by our legal advisers in the United States, and should everything be found to be in order the purchase will be completed. The price to be paid is $75,000 in cash, in instalments extending from the 15th of next month to June 15, 1916. We feel confident that these claims are a desirable addition to our property, and that we shall have your approval in the course we have taken.

The Development of the Mines.

Mr. J. H. M. Shaw: Gentlemen, I have much pleasure in seconding that resolution. It gives me the opportunity to tell you with what great interest I undertook my visit to the Tomboy mine this summer, for after following the development of the mine month after month for seven years in the office I was most anxious to see it all at first hand, and I hope to succeed in interesting shareholders in what I saw. The Argentine mine, although one can easily spend the whole day going through it, needs but a brief description from me. At present very little further development work is being done, and of the 185,000 tons of ore reserves in it, 135,000 tons are already broken and will be drawn from the chutes as and when required. However, when the actual day dawns that sees the end of the Argentine, I believe it will be found to have given us a very much larger tonnage than is actually figured on to-day. The Montana mine can, for practical purposes, be divided into parts—(1) the developed area, which lies practically between raise No. 42 and raise No. 167. Within it are found the 350,000 tons of ore actually in reserve, but this, of course, does not represent all that will come out of it. Further work, as we go along, will develop further large tonnage to take the place of what is now coming out. The most interesting points of development in this part of the mine just now are raise 125, which is now being pushed up to the old Montana workings, and which will enormously improve the ventilation in the whole mine, and the work that is being done below the Ophir tunnel level in levels 1,900 and 2,050, both of which are being pushed north in encouraging ground. The second part of the mine is the almost unexplored ground to the north in the Bushwhacker claim, where we naturally have great hopes that our development will give us ore-bodies similar to those we get on the other side of the valley in the Argentine as we advanced into the higher ground. The present programme is to push the Ophir drift north to the boundary line: to complete, at the meeting of raise 167 and the Fortuna drift, the erection of a hoist and a repairing shop, and then extend the Fortuna drift also to the north boundary line. This brings me to the end of the Bushwhacker claim, where our new property begins, the acquisition of which came up for discussion when I was there. The claims contain about 4,000 feet on the Montana vein, as compared with some 5,400 feet in our Montana property, and they also contain 3,000 feet on the strike of the Sidney vein, which has given, and is still giving, rich ore to the east and west of our purchase, so that their potential value is great. I am satisfied that we have a splendid enterprise, and a thoroughly equipped plant in the able and devoted [illegible] Mr. D. A. Herron.



Mr. D. A. Key inquired whether the acquisition of the new property would necessitate the curtailment of the dividend.

[illegible]

The resolution was then put to the meeting and carried unanimously.

"A Courageous and Wise Policy."

[illegible] Mr. Chairman, as representing, I believe, the largest shareholding in the Company, I should like to say how completely we are in accord with the courageous and wise policy which the board have pursued during the past three years. I was also particularly pleased to hear your remarks with regard to the purchase of the White Cloud group of claims. I beg

to propose, gentlemen, that a hearty vote of thanks be accorded to the Chairman and Mr. Shaw for their interesting addresses to-day and to the board of directors for their careful management of the Company.

Captain Evans seconded the motion, which was carried unanimously.

The Chairman having returned thanks, the meeting terminated.

THE RUSSIAN CORPORATION, LIMITED.

THE first ordinary general meeting was held at the offices, 32 Bishopsgate, E.C., on October 29, Mr. A. W. Tew presiding.

The Manager (Mr. A. B. Sowdon) read the notice convening the meeting and the auditors' report.

The Chairman, at the close of his remarks, alluded to the absence of two of the directors, Mr. N. E. Holden and Mr. L. M. Jacobs, and stated that the former was serving his King and country, while the latter had been in America for some time on business. Continuing, he stated that the account submitted covered the period to September 30, 1915, and while the term covered by the account was approximately 18 months, the Corporation did not have full use of the total amount of the funds until the final instalment upon the shares had been paid up.

The Accounts.

The profit for the period, after providing for all administration charges and other expenses, was £52,660, which was arrived at after making provision for writing down all their investments upon which there was depreciation to market value at the date of the account, and also making provision for the decline in exchange of the roubles held on deposit in Russia at the same date. The object for which the Corporation was formed was the carrying on of the business of an investment and finance company, primarily in connection with Russian securities, and it was the intention that the Corporation should interest itself chiefly in Russian Government guaranteed or Municipal loans and in the financing of railways, harbour works, tramways, light and power concessions, and public works of all kinds. The Corporation started under exceedingly good auspices, not only on this side, but in Russia, and the directorate and management were closely connected with five of the largest Russian banks—an asset which would prove of the greatest value in the future. After referring to and explaining the principal items in the accounts, he said he thought it was a subject for congratulation that they had passed scatheless through a period which had been doubly trying to the Corporation, maintaining their funds in a liquid state and earning a reasonable profit, having regard to the condition of the financial market. Had it not been for the War there was every reason to believe that the results which would have been put before the shareholders would have been much more satisfactory, but until the conclusion of that event they could not look for much activity. The funds of the Corporation were, however, in an extremely liquid condition, and they were therefore in a position to take advantage of favourable opportunities as and when they occurred. During the period under review their manager had paid two lengthy visits to Russia, and had made himself thoroughly conversant with banking and general conditions there, and on two occasions the directors had had the advantage of a visit from two of their Russian colleagues on the board. There was no doubt that the feeling which existed before the War for closer union and relations between the two countries had been and would be more strongly cemented during the present period of trial. Russia was a country of vast resources and enormous capabilities for rapid development, provided it was supplied with the necessary financial facilities and expert advice and assistance.

Germany's Hold on Russian Industry.

The enormous hold which Germany had obtained on the industry of Russia through the assistance and co-operation of its large industrial banks and financial syndicates, backed up with the necessary technical and financial experience in developing and managing enterprise of all classes, particularly railways and public utility and public service corporations, was only too well known. If this country was to render the assistance to Russia after the War which it expected and required, it would be necessary for the financial interests of this country to proceed immediately to put their house in order, so that they could provide that financial and expert assistance for the development of Russian industry; otherwise it would surely slip back into the hands of the Germans, who previously largely controlled the commercial development of Russia. By a proper association of the financial interests of this country, backed up by the technical and commercial experience which they could readily obtain and enlist in their service, this country would be able to forestall the approaches which would undoubtedly be made by the enemy in their own self-interest after the War, and enable Great Britain to obtain the concessions for, and to assist in, the development of large enterprises of a thoroughly sound and public nature. If the financial institutions of this country could only be got together in the manner which he had indicated, and which he strongly advocated they should do without delay, they would be enabled to establish their position and influence in time for the large amount of economic development which was waiting for them in Russia after the War. He concluded by moving a resolution for the adoption of the report and accounts and the payment of a dividend of 4%, less income tax, on the Ordinary share capital, the warrants to be posted on November 1.

Mr. William B. Dunlop seconded the motion.

Lord ffrench testified from personal experience to the control exercised by Germany before the War over Russian industry, and remarked that if this country did not at once proceed to "put its foot down" the Germans would get back into their predominant position in Russia after the War.

The motion was carried unanimously; and resolutions were also passed confirming the election of Mr. Pierce Lacy as a member of the board and re-electing the retiring directors and auditors.

In acknowledging a vote of thanks, the Chairman mentioned that during the period between June 30, 1914, and September 30, 1915, the Government securities of 30 countries showed an average depreciation of 16½% per cent.

"Rubber Companies' Position."—We have received the October issue of this concise and admirably devised book. In it the annual results and the [illegible] progress of over a hundred companies are clearly recorded and analysed, and space provided for the entry of future results. We have also received the publishers of "The World's Rubber Position" for October, containing much valuable information upon the statistical position of the commodity. The price of these books is 3*s.* each for single copies, or an annual subscription to either of one guinea, post free. Messrs. W. H. Rickinson and Son, 3 Great Winchester Street, E.C., are the compilers and publishers.

INDIA BILLS, PAYABLE IN LONDON IN STERLING.

ISSUE OF £3,500,000.

The Treasury has [illegible] to invite tenders for Bills [illegible]

The Secretary of State for India in Council HEREBY GIVES NOTICE that applications will be received at the Office of the Council of the Bank of England, in Westminster, on the Bills [illegible] Act, 1914, and the Act 5 and 6 Geo. V., c. 89, for the amount of £3,500,000 (Three million five hundred thousand pounds) in replacement of Bills for £2,500,000, falling due on the 16th November, 1915, and in partial replacement of Bills paid off temporarily during the current financial year.

The Bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated the 16th day of November, 1915, and will be payable at twelve months after date, viz., on the 15th November, 1916.

The Tenders must be expressed in English currency, and not in fractions of a penny other than half-pence or farthings, and must specify the net amount per cent. which will be given for the amounts applied for; and the Tenders of Private Individuals must be made through [illegible] Bankers.

The Bills will be issued and paid at the Bank of England.

The persons whose Tenders are accepted will be informed of the same on Thursday, the 11th November, and payment in full of the amounts of the accepted Tenders must be made to the Bank of England not later than Three o'clock on Tuesday, the 16th November.

Persons tendering for India Bills are hereby notified that, having regard to the provisions of the Acts 22, Geo. III., c. 45, and 41 Geo. III., c. 52, the acceptance of any such Tender is subject to the express condition that no member of the House of Commons shall be admitted to any share or benefit to arise from the contract thereby made for the allotment of such Bills. The statutes do not apply to contracts entered into by incorporated trading companies in their corporate capacity.

The Secretary of State for India in Council reserves the right of rejecting any Tenders.

Tenders should be upon the printed form which can be obtained at the Chief Cashier's Office, Bank of England.

India Office,
4th November, 1915.

THE SOUTH INDIAN RAILWAY COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the next Ordinary General Meeting of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91 York Street, Westminster, S.W., on Wednesday, the 17th day of November, 1915, at half-past two o'clock for the purpose of receiving the Directors' Report and Statements of Accounts for the year ended 31st March, 1915, and for the transaction of the ordinary general business of the Company. The Transfer Books will be closed from Friday, the 17th, to Friday, the 31st day of December, both days inclusive, for the preparation of the Half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants [illegible] 1st January next will be [illegible] to the Proprietors on the 31st December.

By Order,
NEVILLE PRIESTLEY,
Managing Director.

Company's Offices:
91 York Street, Westminster, S.W.

MONEY.

The supply of money has been reduced this week, and it is evident that a good deal of it has been borrowed by the Government in order to meet its weekly expenditures. During the period in which the great loan of nearly £600,000,000 was in course of payment the Government endeavoured to assist the market as far as possible in making the payments, and was careful not to pile up a great amount of money in the public deposits. Consequently, it made its outlays from week to week with great liberality, thereby setting money free for use in the market as quickly as it was received. The effect of this policy has been a great accumulation of money in the hands of bankers, much of which they have been unable to employ in consequence of the understanding that they should not make loans at less than 4½%. The Colonial and foreign bankers have, of course, not hesitated to lend at less. On the whole, this policy was a wise one, as it helped the market to retain in London large balances which otherwise might have been withdrawn, and has thus tended to restrict the foreign drain of gold. Now that the Government is financing its weekly expenditures by sales of Treasury bills, there will be no difficulty in employing all the money that is available. Indeed, the high rate of discount in London ought to attract here a very large amount of foreign balances, especially as we ourselves are creating these balances by purchasing Colonial and foreign goods so freely. Practically nowhere can money be so well employed as in London, and when one considers that the rate of interest obtainable is 4⅞% upon the very finest security, the inducement to leave money here appears to be irresistible.

No announcement has yet been made as to the policy of the Government in financing its war expenditures. At the end of last week the cash balance had been reduced to £17,500,000. Beyond this amount, of course, is the £48,000,000 standing to our credit in the United States. Therefore it is evident that the Government must borrow nearly all the money it needs for war purposes until it decides again to appeal to the public for a great loan. The revenue is now yielding an average sum of about £5,000,000 a week. Last week the disbursements were £27,000,000, and it is possible that the rate of disbursement in future weeks will be kept down to about £30,000,000, which means that Treasury bills or other borrowings must be effected to the extent of something like £25,000,000 a week.

Reports have been current that negotiations are proceeding for the creation of substantial banking credits in the United States, and that the sum likely to be borrowed temporarily in this manner will be large enough to provide for the great shipments of goods from the United States to this country for some time in conjunction, of course, with the £100,000,000 loan raised by France and Great Britain. No definite information is available as to these operations, but this much seems certain, that if the loan from the United States is not sufficient to maintain the exchange with the assistance of gold exports, the balance will be provided by means of bankers' credits. Hence the prospect of maintenance of the American exchange is distinctly favourable.

In considering the American exchange situation account has, of course, to be taken of the very large quantity of American securities held in this country. An idea has got abroad that the amount is much less than was supposed, but whatever the amount may be it is obvious that the quantity is very large, and that the sale of the securities will permit this country to make any payments that it needs to make to the United States for so long a time that it is not worth calculating how long.

INDIA STERLING BILLS.

Tenders will be received at the Bank of England on Wednesday, November 10, for India bills to the amount of £3,500,000, in replacement of bills for £2,500,000 falling due on November 16, and in partial replacement of bills paid off temporarily during the current financial year. The bills will be dated November 16, 1915, and will be payable at twelve months after date.

BANK OF ENGLAND.

The loss of gold on foreign account this week was very small, amounting to only £216,000. On the other hand, £641,000 of gold came in from the country, and there was an addition of £425,000 to the amount of gold held, which has risen to £56,656,000. In consequence of an expansion of £638,000 in the note circulation, bringing the total to £33,433,000, there was a reduction of £213,000 in the reserve, the total now standing at £41,673,000, and bearing a proportion to the liabilities of 29.49%. There was an addition of £5,652,000 to the public deposits, restoring them to £45,537,000. This money was obtained by drawing £3,896,000 out of the "other" deposits and by increasing the "other" securities by £1,975,000. The amount of the "other" securities is now £98,540,000 against rather less than £34,000,000 before the War. The great increase in the "other" securities has been attended by a nearly corresponding increase in the "other" deposits, which now stand at rather less than £96,000,000, against about £42,000,000 before the War. The public deposits in this period have risen from £12,000,000 to £45,000,000. It is interesting to note that the Bank's holding of Government securities is now less than £19,000,000, or only £8,000,000 in excess of the amount held in July 1914.

POSITION IN NEW YORK.

The supply of money in the United States remains superabundant. Indeed, bankers must have great difficulty in making profits at all, and it is rather surprising that gold should continue to be sent from London to New York with such a mass of money unuseable. The sterling exchange which at the end of last week recovered to 4 64¼ broke sharply to 4 62¾, and has again improved to 4 64⅛. It now presents a much firmer appearance, as the work of arranging for the remittance of the proceeds of the recent Loan is now well advanced. Last week the reserves of the Associated Banks increased over £2,000,000, bringing the aggregate amount to nearly £147,000,000. This sum compares with only £92,000,000 at the beginning of the year. The loans last week increased nearly £7,000,000 and the deposits £9,000,000. The amount of the deposits is now £652,000,000, against £418,000,000 at the beginning of the year, while the loans are £608,000,000, against £436,000,000. Notwithstanding this great expansion in deposits the surplus reserve now reaches nearly £39,000,000, against £23,000,000 early in January.

The following rates of exchange are current in New York:—

New York on—			Rate	Par as usually quoted	Discount %
London	...	sight	$4 [illegible]	4 86¼ dollars for £1	4[illegible]
,,	...	cables	$4 [illegible]		
,,	...	60 days	$4 [illegible]		
Amsterdam	...	sight	[illegible]	40¼ cents for 1 guilder	Prem.[illegible]
Berlin	...	sight	[illegible]	95 cents for 4 marks	14 1
Paris	...	sight	5 [illegible]	5 18 francs for $1	14 2
Mexico	...	Mex. silver $	[illegible]	U.S. 50c. U.S. for 1 Mex. $	2 0

Rates for prime commercial paper and for call loans in New York are as follows:—

Nov. 4, 1915 ...	Prime paper ...	3-3½%	Call money ...	2%
Nov. 5, 1914 ...	,, ,, ...	6-6½%	,, ,, ...	6%

POSITION IN INDIA.

Exchange remains firm at [illegible], and the India Council has no difficulty in selling the 50 lacs of drafts it is now offering. The demand for money in India is steadily increasing, but the recent efflux of silver from the Currency Department in consequence of the trade revival has not been very great. Last week there was a reduction in the stock of coined silver of only 11 lacs, bringing the total down to 3,639 lacs. At this time last year the stock was only 3,279 lacs. With trade likely to improve in India, the demand for money should steadily increase, and it is not unlikely that the amount of Council bills will have to be increased before very long.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, November 3, are:—

	Bills.				Telegraphic Transfers		
Rate.	Tendered.	Accepted.	%	Rate.	Tendered.	Accepted.	%
s. d.	Rs.	Rs.		s. d.	Rs.	Rs.

Total ...	65,000	58,000	—	Total ...	3,40,00,000	49,42,000	—

* Deferred.

	Offered	Tendered	Accepted
Grand Total ...	Rs. 50,00,000	Rs. 3,40,65,000	Rs. 50,00,000

The Amount of Drafts disposed of and the Minimum Rates obtained were as follows:—

	Bills.			Telegraphic Transfers.			
	Rs.	Average.	Minimum.		Rs.	Average	Minimum
Calcutta ...	15,000	1 4 031	1/4 3/32	Def.	15,00,000	1 4 031	1 4 3/32
				Imm.	1,80,000	1 4 062	1 4 1/16
Bombay ...	20,000	1 4 031	1 4 3/32	Def.	5,00,000	1 4 031	1 4 3/32
Madras ...	23,000	1 4 031	1 4 3/32	Def.	25,13,000	1 4 031	1 4 3/32
				Imm.	4,49,000	1 4 062	1 4 1/16

From **April 1** to **November 2** inclusive the Council granted remittances for **Rs. 7,40,36,061**, realising **£4,936,004.** Up to **November 3** of last financial year the total Bills and Transfers sold was **Rs.6,02,66 861**, realising **£4,020,652.** The total sales for the week ended **November 2** amounted to **Rs. 42,40,793**, realising **£283,367.** The amount to be offered for tender next Wednesday will again be 50 lacs.

SILVER.

The Silver market has been strong, and from 24 1/16*d.* the price rose to 24 7/16*d.*, with a slight reaction to-day to 24 3/8*d.* The advance was due to the continued shortness of supplies and to a demand from China, as well as from the Continent.

	Oct. 29	30	Nov. 1	2	3	4	5
London ...	24 1/16	24 [illegible]	24 1/2	24 3/8	24 1/2	24 7/16	24 3/8
India ...Rs.	61 1/4	61 1/2	61 [illegible]	61 1/2	61 1/2	62 1/8	62 1/8
Exchange	1/4	1/4	1/4	1/4	1/4	1/4	1/4

Stock Exchange.

The contango rates "between member and member" are announced by the Stock Exchange Committee this week. Changes that have been made in the past contrast with the first rates fixed as set out below:—

	Nov. 1914	1915 Feb.	1915 Nov.
	%	%	%
Emergency Rules List Securities with cover deposited ...	6	6	6
,, ,, ,, without deposit of cover...	7	7	7
Others quoted in Stock Exchange Official List with cover deposited	6½	6½	6½
Others quoted in Stock Exchange Official List without deposit of cover	7½	7½	7½
Securities not officially quoted with cover deposited ...	7½	7	7
,, ,, ,, without deposit of cover ...	9	8	8

The general Stock markets have been firm, extraordinarily so in the circumstances, and where changes have occurred in nearly all cases it has been to a higher level of prices.

[illegible] the new 4½% War Loan, the price, now quoted clean of dividend, being 96½. The dividend, it is true, is not due for payment over the counter until December 1, but the usual Stock Exchange procedure with British Government securities is to make deduction of the dividend a month before the date of payment. The old War Loan is now quoted at about 90½.

After a long spell of depression and neglect a change of sentiment is noticeable in the Home Railway market. There has been an accession of strength in the American market, and considerable purchases for the other side have been made in London of the Common stocks of the leading railway companies. During the last week or two there has been an inquiry for low-priced descriptions, which had fallen to a sort of bedrock price. Eries had a rise, then M.K.T.s, and this week there has been a run upon Denver issues. The solid dividend-paying securities which stand at high prices have been freely purchased, special attention this week having been given to Atchisons, the London price of which is in the region of 117. Not only have the Americans been purchasing speculatively and for speculative investment the various kinds of industrial securities so common on the New York and other American exchanges, but they have been backing up their opinions in the market for copper shares. With the current price for the metal copper companies must be making enormous profits, as American companies for a long while have been making every effort to produce on as large a scale as possible, and have been able to sell at high rates of profit. In the direction of some American industrial securities there has recently been a reaction after the extraordinarily big rise that had previously occurred, but the reaction seems to have passed over and buying is again the vogue.

Our Home Industrial market has been firm in tendency, and rubber shares have again been in demand. An impetus has been given to the Share market by the advancing price of the commodity, the leading quality of plantation rubber now being quoted at nearly 2*s.* 7*d.* per pound, in contrast with about 2*s.* at the beginning of the year. We have recently called attention to one or two cheap shares of rubber companies that are either in the initial dividend stage or who have yet to reach it, but whose profit results during the next few years should be increasingly large. Except for the influence of the Excess Profits Tax the outlook for rubber companies is favourable, as properties of young companies are now coming into bearing on a comparatively large scale, and the price of rubber is trending upwards. There has been ability, to an unexpected extent, with most well-managed companies to effect substantial reductions in "all in" costs. Then, from the market point of view, there still is in many cases a low level of prices prevailing. We have had quite two, possibly three, spasms of unhealthy "boominess" and subsequent heavy reactions. In making purchases at the present time one is not on the crest of a boom, but a reasonable range of prices at a time when there is the outlook of further improvement.

The speculative investor in a small way likes shares of low denomination, and hence the normal £1 shares of industrial companies standing at a low price have been run after. The demand for this class of shares has not been confined to companies producing raw material, such as rubber, oil, tea, and so forth, but in connection with catering companies, armament and manufacturing undertakings, and industrial concerns generally.

Reverting to the more solid stocks, there have been a continuance of strength in South Americans and a maintenance of strength in the Mexican group of securities.

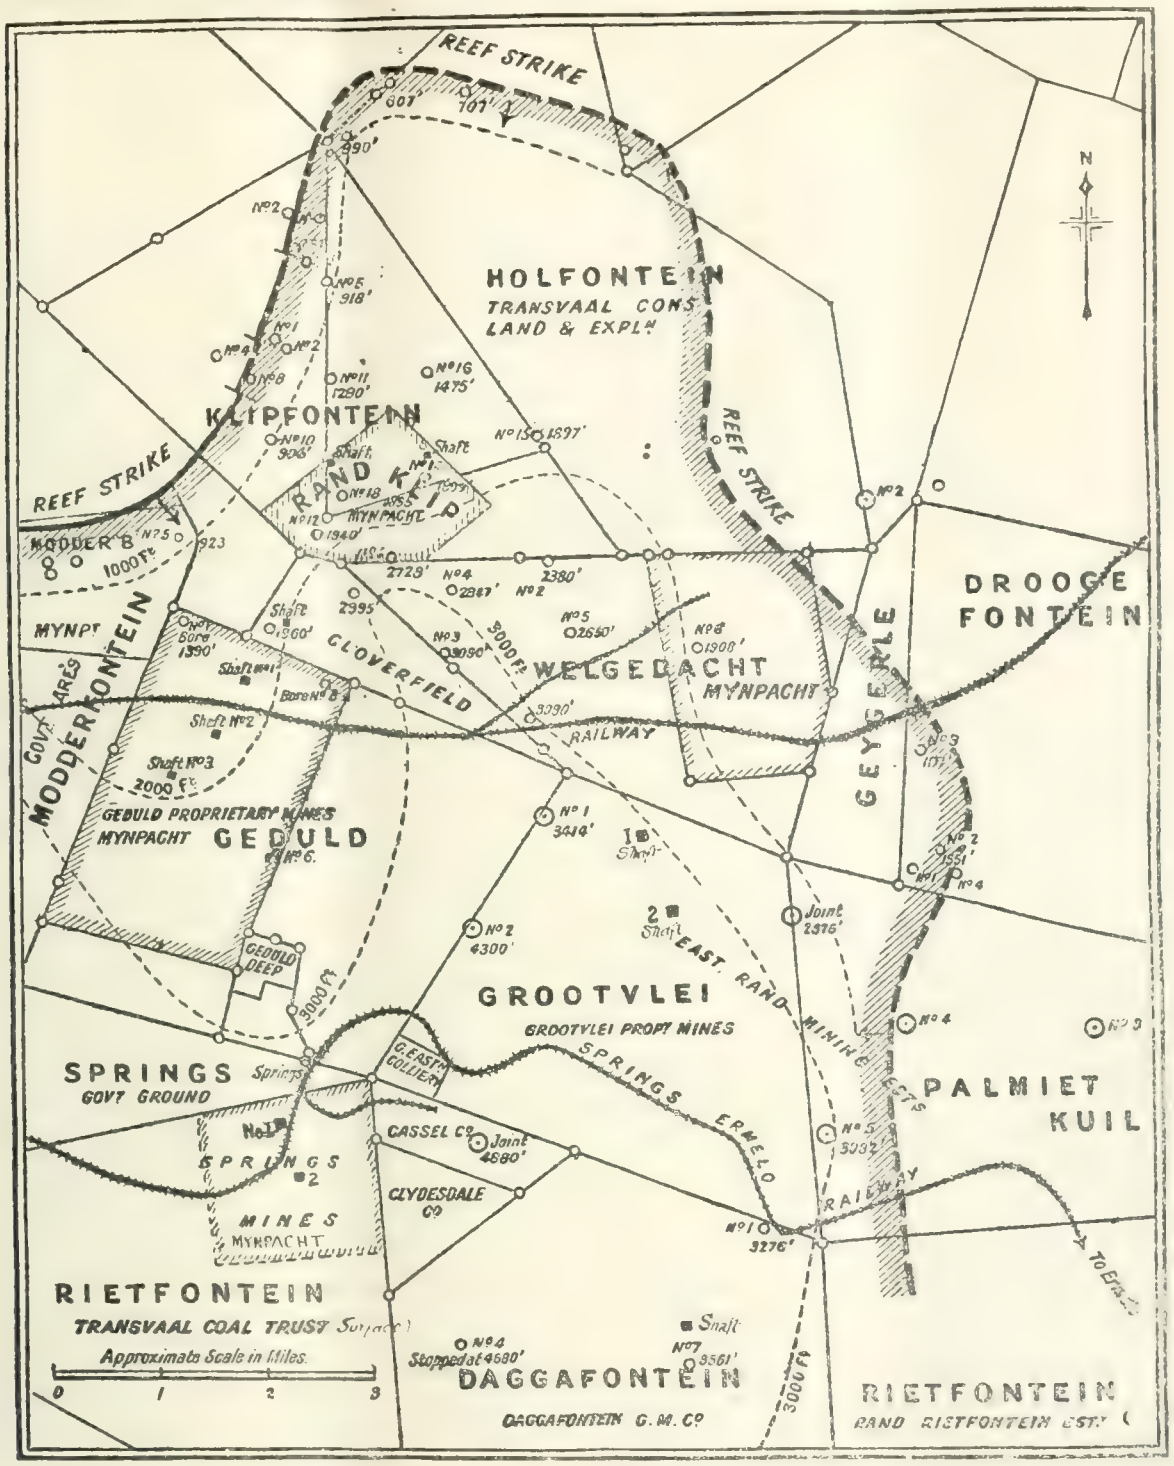
Mining Topics.

For some time past, during a period when the general stock markets were unsteady and in places distinctly weak, the mining markets maintained a comparatively firm appearance, and this week there has been a remarkably firm trend all round, and in the Mining market nearly all prominent shares of mining companies that are regarded as having merits, where any changes in price have occurred, have improved. A market which exceptionally has been inert has been that for Russian descriptions, but even here there is no endeavour to effect sales, notwithstanding the discomfort of the further rise in the exchange rate, about 143 roubles being required to buy a £10 remittance to this country, against a normal average of approximately 95 roubles. Apropos of Russian mining undertakings, though work has been much interfered with through the Government's withdrawal of labourers, work, nevertheless, on a reduced scale is still being pushed forward.

The main activity in the South African department has again been in Far Eastern Rand shares. The reasons for this activity we have intermittently explained, and of late in a series of articles dealing with the position of different companies operating in this interesting district. This week we deal with the position and outlook of the Springs Mines, a Company owning a deep-level property several miles from where the outcrop comes near to surface. The shares have been in request, and have appreciated to over 28*s*. There has also been a strong inquiry for Van Ryn Deeps, which have advanced to 2$\frac{1}{8}$, and Modder B's, which are in the region of 5$\frac{3}{4}$. A little profit-taking has checked the recent rising tendency in Modder Deeps, while the old "Modders," or as they are termed "New" Modderfonteins, remain comparatively inactive. City Deeps have also been a feature of interest during the week. We deal elsewhere with the dividend declaration of the Gold Fields Company.



A firmer tone than for a long while past has been noticeable in the West African market, and this is not to be wondered at. One or two companies are making satisfactory progress. Taquahs have been in request on the report, and it will be remembered that the Company recently declared a dividend of 5% on account of the current year; 15% was paid for the financial year ending June 30 last. Abossos have also been in some demand during the week, while Ashanti Goldfields are harder. There has been little doing in Indian shares, and the Rhodesian market, though firmer as to prices, still presents a dragging appearance; the Westralian section remains quiet. Among base metal shares, practically the only feature has been the weakness of Tronohs, which, on the poor return for October, have receded to 25*s*.

The market for copper shares remains hard, and apropos of the state of the base-metal market we call attention to observations elsewhere upon the considerable fluctuations that have occurred in recent months in copper, tin, lead, zinc, and also iron.

Large purchases of diamond shares continue to be made. De Beers Deferred have improved to 11$\frac{3}{4}$ and the Preferred to 13$\frac{3}{4}$. An improvement is also shown in Premiers, where the Deferred has advanced to 4$\frac{7}{8}$ and the Preferred to 7$\frac{1}{2}$.

Among the mining dividends of the week are Golden Horse-shoe, 2*s*. 6*d*. per share free of tax, the last dividend being 3*s*. in May; and Ooregum, 9*d*. per share on both Ordinary and Preferred, the same as for the corresponding period last year. Hampden Cloncurry's dividend of 10% compares with a like distribution for the June half of the year.

*** We call attention to the dividend announcement of the Consolidated Gold Fields of South Africa Company and comparison of results of the last three years at page 465, and to the record of price movements over an extended period of base metals given at page 473.

SPRINGS MINES.

In the early days of the Rand control of a very considerable portion of the Far Eastern Rand was secured by the Transvaal Coal Trust, the land being selected in those days on account of its containing coal formation at shallow depth. Subsequently there came the ascertainment that far below the coal strata there existed gold-bearing deposits. There was much scepticism about the payability of the region from gold getting, but gradually the trend of the reef was ascertained and its nature tested by a variety of boreholes. A great deal has since been ascertained, and the region now enjoys a good reputation.

Two of the large properties of the Transvaal Coal Trust were farms Brakpan and Rietfontein. After preliminary bore tests mynpacht area was selected in respect of farm Brakpan, and later on in respect of Rietfontein. At first the development operations at the Brakpan were of disappointing character; later they substantially improved. In 1909 the Springs Mines, Limited, was formulated as a subsidiary Company, and has the gold rights in respect of the whole of farm Rietfontein, approximately 4,030 morgen, or a little over 8,000 acres, in extent, inclusive of the 1,332 mining claims selected as mynpacht; &c. Six years prior to the formation of the Company the original owner of the property had tested the area by two boreholes, whereby there was ascertainment of the existence of reef at 3,438 feet, and, a little to the south, at 3,692 feet below surface. The mynpacht area selected extends approximately a mile and three-quarters from east to west, and about the same distance from north to south, being almost a perfect square. To the east of the property is the ground of the Daggafontein Company, and to the north-east that of the Grootvlei Proprietary. In both these areas shafts have been located. In the Daggafontein property reef was intersected in the shaft at a depth of 3,580 feet. A commencement of shaft sinking was made at Grootvlei in the autumn of 1909, but shortly afterwards all operations were stopped. To the north of Springs is situated farm Geduld, and the north-western portion of farm Geduld has been selected as the mynpacht area of the Geduld Proprietary Mines, Limited, where profitable operations are being conducted, and recently the Company has ordered an extension of its reduction plant. Between the Geduld

Proprietary and the Springs Mines mynpachts is land not taken up by any mining proposition, but which will probably, in the not far distant future, be arranged to be worked by agreement between capitalists and the Government. Included in this area there may be included the small property of the (New) Geduld Deep, Limited, with a portion of farm Geduld, also proclaimed "Springs"-Government ground. The large estate area of Springs Mines, Limited, probably will be similarly arranged to be worked by the Springs. In the region there are the unformulated proclaimed estate of farm Brakpan, belonging to the Brakpan Mines, Schapenrust, &c., which also will probably be worked under lease from the Government.

It has to be borne in mind that besides the rights in respect of its 1,332 claims of mynpacht area, the Springs Mines has gold rights over the farm, which the Government intends to proclaim a public digging; and in case the property is taken up for gold mining some compensation will have to be paid to the Springs Mines, in lieu of the old form of right to a moiety of the claim licence payable to the Government.

Having thus set out the position of the Company, we may now consider briefly the history of the Company's formation.

The Springs Mines, Limited, was formed in South Africa in May 1909. The issue of share capital was fixed at £630,000, in £1 shares, and 300,000 shares were passed to the vendor Company, representing about £230 per claim, irrespective, however, of value of estate gold rights, and 330,000 shares were then issued at 1½ per share for the provision of working-capital resources. The work of sinking two shafts was immediately commenced, one to the north and the other to the south, respectively about 4,500 feet apart. Both shafts are of large pattern, 42 feet by 9 feet. A brief historical retrospect may be formulated and is set out below:—

		Width	Assay	
		Inches	Dwt.	s. d.
1903.	Two bore tests			
	(1) 3,477 feet depth indicated...	18.56	28.5	121 2
	(2) 3,616 ,, ,, ...	10.8	21.5	91 5
1909.	May—The SPRINGS MINES, LIMITED, registered.			
..	Two shafts commenced August, September.			
1913.	March—No. 1 (north) shaft struck reef 3,438 ft. depth.			
..	August—No. 2 (south) shaft intersected reef at depth 3,692 feet.			
..	April—Issue of £315,000 6% Debentures.			
1915.	February—Loan arrangement for provision of £315,000			
..	Plant of capacity 30,000 tons per month ordered.			

Developments have been reported as under:—

	Total Footage	On Reef	Footage Stoped	Percentage	%	Width Inches	Assay Value	Sinking Inches

* Footage sampled. † Official total.

It is to be mentioned that by the early part of 1913 the Company came to the end of its resources, and for effecting the conclusion of shaft sinking and to provide for an era of development more money was required. In April 1913 the Transvaal Coal Trust Company guaranteed, for 5% commission, an issue of £315,000 6% Debentures, and offered, at the issue price of 97½, a portion of the total to its own shareholders *pro rata*—£1 of Debentures for each four shares held—and to Springs Mines, Ltd., shareholders £1 of Debentures for each two shares. Allottees of Debentures received an option whereby till May 1, 1916, they could elect to take up an aggregate of 315,000 £1 shares at par. These option rights are in the form of certificates to bearer, and the present price of the certificates is about 8*s.* per share.

At the beginning of 1915 developments had proceeded so favourably that it was decided to order reduction plant, and the Consolidated Mines Selection and the Transvaal Coal Trust companies came forward to render the required financial assistance. They engaged to lend the Springs Mines, Limited, up to £315,000 at 6½% interest, receiving, as well as a commission of 5%, an option to take 55,000 shares at par to July 1918, or two years after the conclusion of peace, whichever shall be the later date; also, in addition, the right to take up any option shares which owners of certificates did not exercise their rights over on May 1, 1916.

The summary of the position at the moment, therefore, is that the share capital is formulated as £1,000,000, in £1 shares, and the position as to these shares is as under:—

	Shares
Issued to vendors	300,000
Issued for working capital at 1½ per share ...	330,000
Option rights at par, *re* Debentures ...	315,000
Loan guarantee option rights, at par ...	55,000
	1,000,000

The initial unit of the plant, resources to pay for which were provided at the beginning of 1915, is to have a capacity of 30,000 tons per month, and the first delivery of plant is expected by the end of 1915. It is hoped milling will commence within the second half of 1916.

It is to be noted that the Springs has had very much the same experience as the Brakpan—that is, there are zones of payable and unpayable ore. Of the developments that have been effected to September 30, 1915, of the aggregate footage sampled, the Springs' pay ore has represented about 54%, and the balance has shown assays below present payability. In this circumstance it will be wise for those who make calculations as to the life of the property to regard, say, half the claim area as unpayable. The dip in the region of the mine is a very flat one. The distance between the Geduld No. 2 shaft and the northern shaft of the Springs Mines is over three miles, and taking the respective depths where the reefs were intersected in these two shafts the average dip is in the region of six degrees. The ore reserves of the Company, to which we will refer later, are based upon a stoping width of 53½ inches. With a 6 degrees dip and, say, 4½ feet stoping width allowed the gross amount per claim would be 24,165 mine tons. If, to be on the conservative side, we make a further allowance of, say, 15% for underground and overhead sorting, the mill tons per claim would be, say, 20,000.

We may now sum up the position as to life by assuming 50% of the 1,332 mining claims as payable, that is 666 claims.

Mill Tons

666 claims × 20,000 mill tons per claim equals 13,320,000

This, on a use of 360,000 tons per annum, would last the mine about 37 years. With a property of such area, however, there is every probability that, as and when events permit, an extension of plant will be effected, and the life reduced with the benefit of increasing profits over the reduced life.

At June 30, 1915, the ore reserves developed were estimated at 854,000 tons, averaging 45*s.* per stoping ton, and calculated on 53½ inches stoping width.

Data on which to base calculations as to value of the ore appear to be very uncertain, and one has no actual experience, like that afforded when a company is well into the stage of production. Quite early in the year an unofficial estimate was put forward that by May 1915 there would probably be 1,000,000 tons of 36*s.* 6*d.* ore in the ore reserves. This calculation seems to have assumed the inclusion of some quantity of non-pay ore, and was estimated prior to the good showings of 1915. Next we have the fact that at June 30, 1915, the pay-ore reserves were given as 854,000 tons of an average of 45*s.* per ton assay value, this being based on a stoping width of 53½ inches. Reference to the development statements to September 30, 1915, given above, show an aggregate average of 2,662 shilling-inches assay value, which, applied to a stoping width of 53½ inches, equals 49*s.* 9*d.* per ton. Then we have to recollect that with alternations of good and low-grade ore it may be impossible to

avoid sending much low-grade ore to surface with the payable ore. Anyhow, there is the liability to much variation, and one cannot, with any feeling of assurance, fix what will be the probable average recovery value after the mill has been seasoned and a proper recovery value is ascertained. What will be the costs is a moot point, but, having regard to the deep-level propositions of the Far Eastern Rand, some of them working in the region of 15*s.* per ton, it would, we consider, be conservative to allow for the Springs Mines, on commencing, a cost of 20*s.* per ton.

In the circumstances, to conjecture profit results per ton partakes of the nature of a guess, but we may be permitted to say that we look for a minimum profit of 15*s.* per ton, and there are possibilities of much better figures in case of a higher recovery value than the 35*s.* per ton which we assume would give a profit of 15*s.* per ton. We set out below three calculations on different recovery values, by which we arrive at 15*s.*, 20*s.*, and 25*s.* per ton profit, and we show what this would mean in the percentage of net profit to £1,000,000 of share capital:—

	s.	*s.*	*s.*
Recovery value per ton	35	40	45
Costs per ton	20	20	20
Assumed profit per ton	15	20	25
	£	£	£
Gross profit on 360,000 tons	270,000	360,000	450,000
Taxes, &c., and, say, £40,000 interest on Debentures and loan	75,000	85,000	95,000
	195,000	275,000	355,000
Debenture redemption fund to retire at £31,500 per annum	31,500	31,500	31,500
Net profit	163,500	243,500	323,500
On £1,000,000 of capital during period of Debenture redemption	16.35%	24.35%	32.35%

By the time the dividend stage is reached the issued capital of the Company may be raised to £1,000,000. With the outlook and the market price what they are, it may be assumed that all the 315,000 option shares on May 1 next year will be issued, and materially, thereafter, reduce the interest to be paid in respect of loan, so that the calculations we make above as to the amount of interest to be paid in respect of Debentures and loan may turn out to be excessive. By the time the mill has got into its stride, and the profit stage is reached, commencement of provision for retirement of Debentures will have to be considered. This retirement will call for £31,500 a year for 10 years.

All the life calculations are, so far as we can see, based upon conservative data, but none the less they are very conjectural as well as approximate. Assuming that the calculations turn out to be near the mark, and with a life of 37 years, and the first unit of plant only, that is 360,000 tons a year, the present value of the share on these lines is worth presenting. The investor in the shares who desires 10% income on his investment, and utilises excess received for investment at 5% to redeem his capital at the end of life, will find that the present values of the share with dividends mentioned, and altogether disregarding an increase in value after the period of Debenture redemption is expired, varies as under:—

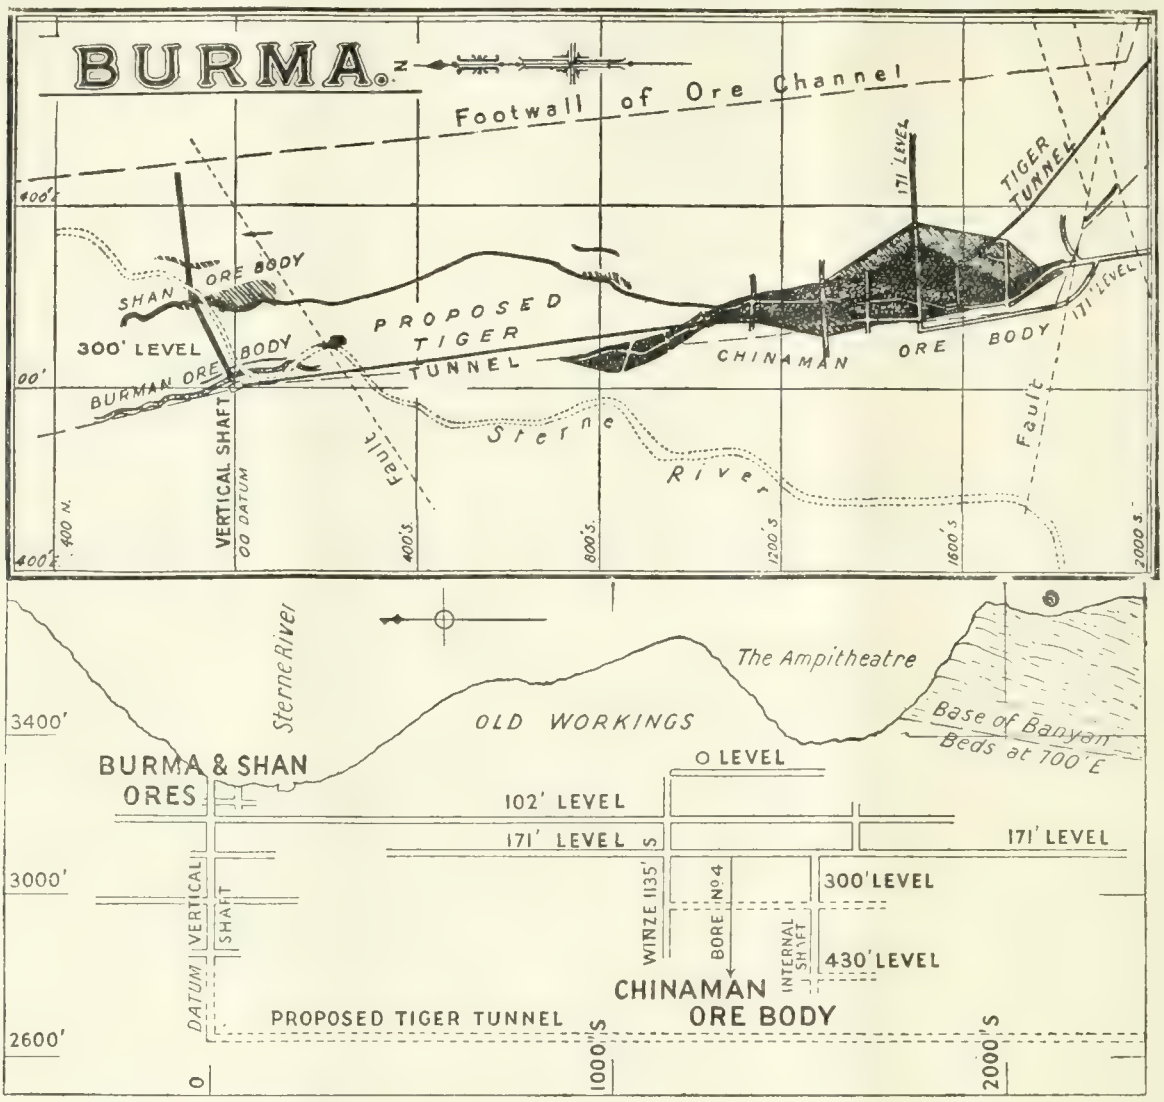
Assumed dividends on £... paid-up capital ...	15%	22½%	30%
Minimum present value per £ share ..	27/6	41/-	54/-

The present price of the shares is a shade over 27*s.* each.

BURMA CORPORATION.

The issue of the Burma Corporation's report for 1914 and the accompanying up-to-date statement of the technical committee enables us again to review the position and prospects of this undertaking. The Corporation holds about 99.8% of the shares and 77% of the Debenture stock of the Burma Mines, Limited, which owns the Bawdwin mines, containing the huge and rich Chinaman silver-lead-zinc ore body. Practically, therefore, the Burma Corporation owns the Bawdwin mines and finances the enterprise, the funds for which purpose it has to a large extent been obtained by the issue of shares taken up under options.

The Corporation's authorised capital is £1,000,000, in £1 shares. In May 1914 the capital issued or contracted to be taken up was £757,410, and a "call" was then given on 200,000 shares at par for periods varying from 11 to 18 months. Since that date the issued capital has increased to £913,749, so that apparently 156,339 of the shares under option have been so far subscribed. Beyond the share capital of the Corporation there has been created £65,000 of 6% First Mortgage Debentures, £14,000 of which have been issued in exchange for Debentures of the Burma Mines, Limited. To date the Corporation has advanced the Burma Mines £132,823. After provision of this sum the Corporation has about £84,000 of cash in hand and about £86,000 of unissued authorised capital, in addition to the £51,000 of unissued Debentures. Thus from the point of view of financial resources the Corporation's position is sound, and the funds in hand, plus the unissued capital, in conjunction with the profit expected to be obtained shortly from lead and silver production, referred to later, may be looked upon as sufficient, so far as can be foreseen, for future requirements.



Turning now to the mining position, it may be recalled that in our issue of May 29, in exhaustively reviewing the progress of development work, we estimated that 2,000,000 tons of ore must have been brought into sight. The report of the technical committee now states that at the end of August the proven and probable ore reserves were estimated at 2,000,000 tons, averaging 25 oz. silver, 27% lead, and 22½% zinc. Most of this ore is above the 430-foot level, and only a small proportion is reckoned on between the 430-foot and 540-foot level, as work at this depth has been proceeding for a short time only.

The ore reserves estimate now includes 250,000 tons of high-grade silver-lead ore assaying 44 oz. silver, 45% lead, and 21% zinc. The presence of this large block of rich ore is very important, as, being amenable to *direct* smelting, it has a very high profit value. In December 1914 the ore reserves down to 200 feet below the 171-foot level were estimated at 1,310,000 tons, averaging 19.8 oz. silver, 23.2% lead, and 21.6% zinc. Consequently, in barely nine months the quantity of ore estimated to be proven and probable has been augmented by nearly 700,000 tons, and the average metal contents of the whole mass have greatly increased through the discovery in depth of the large quantity of very high-grade silver-lead ore. A comparison of the recent estimates of ore reserves, showing the rapid progress that has been made with the development of the mine, is given below:—

Ore Reserves.

		Tons	Aver. Values— Silver Oz.	Lead %	Zinc %
April 1914	[illegible] ...	1,154,000	—	—	—
Dec. 1914	Proven [illegible] and 171-foot Levels) ...	[illegible]	[illegible]	[illegible]	[illegible]

A word now as to the position of development work. At October 21 the internal shaft, the deepest working, had reached a depth of 446 feet below the 171-foot level, or Chinaman tunnel, the ore showing in the shaft at this depth having a value of 15 oz. silver, 17½% lead, and 20% zinc. This internal shaft is now down to within 40 feet of the random of the Tiger tunnel, the intended main-haulage level of the mine, to which, for economy of operation, the ore above will be *dropped* instead of being hauled to surface. The distance of the portal of the Tiger tunnel, on the hillside, to the Chinaman ore body, which it is to cut at about 500 feet below the 171-foot level, is approximately 6,000 feet. Of this distance about 3,000 feet has now been driven from the portal. When the internal shaft is sunk to 500 feet below the 171-foot level, as it very shortly should be, the driving of the Tiger tunnel can be carried on from two ends, resulting in acceleration of progress. The technical committee states that by this time next year the Tiger tunnel is expected to be connected with the Chinaman ore body, thus obviating the necessity of draining, pumping, and hoisting through the internal shaft. By that time it is stated the mine will be in a position to produce, if called upon, 1,000 tons of ore per day through the Tiger tunnel. The great importance of this point lies in its bearing upon future operating costs. Briefly summed up, the mining position is that there is now in sight 2,000,000 tons of very rich silver-lead-zinc-bearing ore, and that in a year's time the mine will be in a position to supply, say, 300,000 tons of ore per annum. Thus from the mining point of view the Corporation is in a very strong position.

We now come to consider surface equipment and production. Up to the end of 1914 the output of the Burma Mines had been achieved from direct smelting of old slags and a small quantity of mined ore, therefrom producing lead bullion, or, as it is termed, hard lead, containing about 95% lead and some silver. Owing to insufficiency of existing refinery capacity only a portion of the lead bullion has been refined locally, and the soft lead thus produced sold in the East. The balance of the lead bullion output has been, and we believe still is, sent to London for refining. This inefficient and uneconomical procedure is to be altogether altered, and the results obtained by the producing methods recently in vogue therefore are no criterion for the future. Nevertheless they serve as a basis for obtaining an idea as to what may be accomplished by alteration and modernisation of the process of production. In the year 1914 the Burma Mines smelted 24,858 tons of old slags and 8,812 tons of mined ore, the result being a production of 8,471 tons of lead bullion, of which about one-half was shipped for refining and the remaining half refined at the Company's own refinery, and the soft

Burma Mines.

					Year to Dec. 31, 1914
					Tons
Slag treated					24,358
Ore treated					8,812
Total material treated					32,170
Lead produced					8,471
Yield of lead per ton treated					26%

	£	£	Per Ton of Ore & Slag	Per Ton of Lead Produced
Value of Production—				
Lead bullion sales and consignments	151,374			
Lead and ore on hand	20,019			
		171,393	106/9	£20 4/6

Management, general and sundry	13,334			
Development written off	31,563			
		168,320	104/6	£19/17/6
Working profit on ore treatment	—	3,073	2/3	7 6

lead product sold in the East. The lead bullion yield per ton of material smelted worked out at approximately 26%, but, partly owing to the slags containing little silver, and partly owing to the method of treatment, very little, if any, revenue was obtained on account of silver contents. For the lead bullion alone, however, the revenue amounted to approximately £171,000, equal to 106*s.* 9*d.* per ton of material smelted, or about £20 per ton of lead bullion produced. Against this the operating expenditure, including £31,563 charged for development, absorbed £168,000, equal to over £5 per ton of material smelted, or £19 17*s.* 6*d.* per ton of lead bullion produced. Thus, with no silver revenue and an uneconomical method of production, there was a small operating profit for the year notwithstanding the diminutive ore output. The figures are given on preceding page.

We would particularly draw attention to the fact that the above results were obtained from a very small quantity of material smelted, and that material mainly old slags, containing very little silver. With production on a scale commensurate with the size of the mine—that is to say, when there is ability by concentration, smelting, and refining, to deal with the output of over 300,000 tons of ore per annum, which the mine itself will be capable of supplying in a year's time—the operating costs would be vastly different, for then each unit of energy in mining, treatment, transportation, would perform a much greater amount of work at a given cost. However, apart from that, and without any very great increase in the quantity of material treated, there is the outlook almost immediately of a very considerable improvement in the earnings, on account of alteration in the method of treatment and the use of high-grade silver-lead ore instead of slags, resulting in a large output of silver in addition to a much-increased production of lead. This will be better understood if the method of treatment to be adopted is explained. Hitherto the material dealt with has been direct smelted, and the product only partly refined. There has been no concentration of the material before smelting. But now a great number of concentrating tests have been made, and these indicate that the average ore can be concentrated successfully into two products of commercial value, the same as at Broken Hill—namely, lead and zinc concentrates—thus greatly increasing the profit value of the ore. The zinc concentrates, when the stage of producing them is reached, would be shipped. At present we are concerned with lead and silver only. The existing small concentrating mill is to be enlarged so as to treat 100 tons of average-grade ore per day. In this way high-grade lead-silver concentrates will be produced. Then, as the technical committee's report states, steps have been taken to enable a mixture of concentrates and roasted ore (the direct-smelting, high-grade silver-lead ore) to be smelted, and a production of 1,500 tons of refined lead and about 140,000 oz. of silver per month obtained, equivalent to, say, 18,000 tons of soft lead and 1,600,000 oz. of silver per annum. This, we believe, should be the rate of output attained within the next few months, as both smelter and refinery output have already been considerably increased, and the refinery will shortly be able to deal with the whole of the anticipated 1,500 tons of hard lead (lead bullion) output per month. We take it the roasted ore referred to is the direct-smelting, high-grade silver-lead ore, of which there is now 250,000 tons in sight. This ore has an estimated average assay value of 45% lead and 44 oz. silver per ton. Assuming the lead yield of the mixture of average ore concentrated and high-grade ore direct smelted to be 30%, the quantity of ore required to be treated to produce 1,500 tons of lead per month would be 5,000 tons. That is to say, we assume that say about 5,000 tons of ore per month will shortly be treated to produce 1,500 tons of lead and 140,000 oz. of silver. Taking lead at £20 per ton—the present London quotation is £24—and silver at, say, 2*s.* per oz., the value of the product would be £44,000 per month. As regards costs, we have shown that on the small production of 1914 the total operating costs, including development, amounted to about £5 per ton of material treated. Conservatively we will assume an operating cost on the increased production of £5 per ton treated, *excluding* development. On this basis the monthly profit before debiting development expenditure would come out at about £19,000 per month, as shown by the figures given below:—

5,000 Tons of Ore Treated Monthly.

Refined lead produced, 1,500 tons.
Silver produced, 140,000 oz.

	£
Value of lead at £20 per ton	30,000
Value of silver at 2*s.* per oz.	14,000
Total value of output	44,000
Working costs, exclusive of development, at £5 per ton	25,000
Working profit before allowance for development	19,000

The above rate of lead and silver production is expected to be reached very shortly, say next year, and if our assumption as to cost of production is approximately correct—it is probably more above than below the mark—a monthly profit of £19,000, or at the rate of over £200,000 per annum, will remain for the purpose of providing for development outlay, office and general expenses, Debenture interest, and capital expenditure on plant and accessory equipment.

Thus it seems fairly certain that by the aid of the earnings about to be obtained from the treatment of a comparatively small quantity of, say, 60,000 tons of ore per annum, *plus* the financial assistance of the Burma Corporation, the Bawdwin mines will be brought ultimately to the stage of very large production and huge profits, whereby the Corporation will be enabled to pay high dividends on its capital. This is, of course, not in immediate prospect. First of all the outcome of the enlarged scale of operations referred to above, and about to be entered upon, will be closely watched by the engineers, and on the result of, say, six or nine months' working on this scale designs for the large-pattern plants and equipment will be modelled. The mine will be ready to supply 1,000 tons of ore per day, say 300,000 tons of ore per annum, this time next year, and if the scale of operations now to be embarked upon results satisfactorily, as is believed will be the case, the interval of waiting before the completion of the surface equipment necessary to deal with 300,000 tons per annum will not be long. Even on the use of this quantity of ore yearly the present ore reserves would represent many years' supply, and as, according to official estimates, the profit value of the ore averages at least £2 per ton, the annual profit when there is ability to deal with 300,000 tons per annum would be, say, £600,000, in comparison with the Burma Corporation's authorised capital of £1,000,000.

We have made the above calculations with a view to showing the great potentialities of the undertaking. There is, of course, always the possibility of the advent of contingencies impossible to foresee. This is where the speculative character of the undertaking—and, in fact, of all mining concerns—comes in, but, nevertheless, at their present price of under 30*s.* Burma Corporation £1 shares certainly appear to be attractive, on account of the wonderful development results already obtained and the great potentialities in regard to profit-earning capacity.

[We regret that want of space compels us to hold over an article on the position of the Ivanhoe Company. We hope, however, next week to give the remarks we have prepared.]

LONDON, SATURDAY, NOVEMBER 6, 1915.

FINANCING THE WAR.

BEFORE we present for the consideration of our readers the important reference to the question of finance which the Prime Minister made in his comprehensive speech on Tuesday last, it may be well to give a brief survey of the financial and economic situation of the country.

Briefly the situation is this: Great Britain possesses great accumulations of wealth which, together with her command of the sea, her great commerce, and the consequent maintenance of her income at a high level, give her great resources and place her credit far beyond question. At the beginning of the War it was necessary to dwell upon the wealth of Great Britain and the strong condition of her finances in order to convince everyone that the serious disturbance to confidence which then occurred was a temporary matter. Subsequent events have shown this view of the matter to have been the sound one. Practically all the effects of the extraordinary situation last August have long since disappeared. The situation needed to be dealt with promptly and comprehensively. This was done effectively and well by Mr. Lloyd George, then Chancellor of the Exchequer. It has been officially announced that only £33,000,000 of uncollectible debts due from enemy countries are held in abeyance until the end of the War, and when one considers that the amount of international bills in the London market at the time that the Government guarantee was given was upwards of £350,000,000, this result is exceedingly satisfactory. Moreover, the whole or practically the whole of the £33,000,000 still due will be recovered when peace is restored.

The ease with which the financial situation of the country was adjusted in the autumn, and the appreciation of the wealth and income of Great Britain have induced the Government to incur great expenditures for defence, and at the same time to make most liberal and generous advances to our Allies. All this is not only in accordance with the letter and spirit of the agreement with our Allies, but is in accordance with the wish of the entire country. The Prime Minister's statement at the Guildhall some few months ago, "We shall fight to the end, to the last farthing of our money, to the last ounce of our strength, to the last drop of our blood," has been applauded and endorsed from one end of the land to the other.

To spend as much money as the Government is now spending, however, necessitates the mobilisation of the entire financial resources of the country. These financial resources consist, in the first place, of the normal savings of the country; secondly, of the additional money that is saved by the transference of men from peaceful to warlike occupations; and thirdly, of the additional profits and income accruing to manufacturers, traders, shipowners, colliery owners, and the working classes in consequence of the War. From the additional income thus available must be deducted the loss of income arising from the curtailment of production in consequence of the withdrawal from productive industry of great numbers of men. In large measure, however, the loss of production resulting from this transfer has been reduced by the employment of women and boys in place of the men enlisted. Nevertheless there is some reduction of income. It is, however, by no means impossible for that reduction to be completely made good by employing more women, by more strenuous work on the part of men not enlisted, and by greater efficiency in the employment of both labour and machinery. We have no doubt that the call to everyone, both men and women, to do their best work at the present time will bring about a further substantial recovery in production. Of course we assume that the Government will not withdraw from industry more men than can be withdrawn without curtailing income. Beyond its great income the country possesses a large quantity of foreign securities which can be sold to other nations that have the power and desire to buy them. Furthermore, at the beginning of the War the country possessed a large quantity of floating capital which it was employing in all parts of the world. Lastly, the credit of the country is equal to that of any other country in the world.

Thus with its income nearly as great as it was before the War, with its savings greater than before the War, and with a substantial amount of floating capital available for meeting exceptional expenses, its position last autumn was wonderfully strong. But Great Britain possesses an additional element of strength which can be brought into play when necessary. It has never been the practice of the British people to stint their expenditures, and every family that possesses the means of spending money freely does not hesitate to provide itself, not only with all the necessaries it requires, but with as many comforts and luxuries as it can reasonably afford. The savings of the British people are made after all these other expenditures are provided for. Hitherto the British people have financed this great war in the same way as they would have financed a new Government building, a new county hall, or a new post office. They have assumed that expenditures for such a purpose would be met after they had supplied themselves with their necessaries, comforts, and luxuries. This is the situation at the present time. The nation is spending just as much upon its necessaries, comforts, and luxuries as it usually does. In fact, expenditure upon these things are greater than they have ever been. Hitherto

the entire cost of the War has been financed out of normal savings and by the consumption of floating capital. The greatest reserve which the country possesses is still untouched—the power to reduce its expenditures upon comforts and luxuries, and by so doing to set free the additional money needed by the nation for war purposes. How much can be set free in this manner is difficult to calculate. We are convinced, however, that without serious difficulty the country can increase the annual sums it has hitherto devoted out of income to the War by about £400,000,000 a year, or over £1,000,000 a day.

Beyond the additional sum that can be provided in this manner out of income over and above existing savings, a substantial sum can be found by selling some of its foreign investments or by borrowing abroad for the purpose of maintaining the exchange.

The current rate of the country's expenditure is £4,500,000 per day. Of this sum taxation next year will take care of about £1,000,000 per day, and the existing rate of the country's savings will provide for another £1,500,000 per day, leaving a gap of £2,000,000 a day to be filled. It will be possible to fill this gap by reducing the country's expenditures upon luxuries and comforts to the extent of £1,000,000 a day, and to finance the remaining £1,000,000 a day by sales of foreign securities and by means of foreign loans.

It is obvious that it is now necessary to invite the country to stop its expenditures upon luxuries and to reduce its expenditures upon comforts; but having regard to the spirit of the British people at the present time and their desire to do everything essential to secure victory, this is not a really serious matter under existing conditions. The problem would, of course, be a very different one if the great mass of the people of the country were not heart and soul behind the Government in prosecuting the present War and if they had not determined to submit to any sacrifice they might be called upon to make. But as this is the attitude of the British people towards the War, all that needs to be done at the present time is for the Government to take the measures for collecting from the country the money it is only too willing to provide. Doubtless Mr. Asquith's statement was intended to indicate to the British people that the time has now come when each one must do his share to secure victory by providing the Government with all the money needed for the War, both by strenuous efforts to maintain and, if possible, to increase the income of the country and by keeping down expenditure through a moderate amount of self-denial. Having regard to the great difficulty which the average Englishmen finds in saving money when he has it in his pocket, we hope the Government will in the early future take measures for mobilising the most important financial reserve that any nation possesses—that part of its income which in times of peace it devotes to expenditures upon comforts and luxuries and which at the present time is greater than usual.

In conclusion, we would point to the very great difference there is between the financial strength of Great Britain and the financial strength of Germany. Here the wealth and income of the country have hitherto been so great that practically no one has yet felt it necessary to reduce his or her expenditures upon the ordinary things of life, whereas Germany, to meet her war expenditures, has been compelled to keep the great mass of the German people in a state of semi-starvation ever since the beginning of the present year. The contrast between the lavish manner in which Great Britain has spent money, not only upon war, but for the purpose of personal enjoyment, and the manner in which money has been husbanded in Germany, indeed, provides a striking commentary upon the great disparity that exists between the financial resources of the two States and gives the measure of their financial power to continue the great conflict in which they are now engaged. Great Britain has not yet begun to put out her full financial strength.

With these introductory remarks we reproduce below Mr. Asquith's important statement, which, it will be evident, is intended to direct the attention of the British people to the situation and to the importance of curtailing their expenditures upon luxuries and comforts to the extent necessary to provide the balance of the money which cannot be found by other methods.

"I am sorry to have kept the House so long with these matters, but I set forth with the object of telling them everything that I could well do; and I now proceed to ask myself and to ask them the further question after this review of the various theatres of operation: What are we doing and what ought we to do, in addition to all that we have done, first, as a community, and then as classes and as individuals? We have, as my right hon. friend the Minister of Munitions said in a speech in May last—which I trust was widely read—as partners with our great Allies, three special co-ordinate functions to discharge. First of all, there is the supply of men, an adequate supply of men, for the Army; then the provision of the munitions of war, not only for our own troops, but for the forces of our Allies; and thirdly, the burden which we have taken upon ourselves, and which to the utmost of our ability we shall endeavour to discharge—the burden of common allied finance. One of the things which we have to consider is how we are to co-ordinate and to adjust the different functions, the object being that we here in the United Kingdom and in the British Empire should contribute most fruitfully and most effectively to the common cause. I would say just one word, first of all, as to the third of those points, namely, the question of finance. The financial position to-day is serious. The extent to which we here in this country are buying goods abroad in excess of our exports is more than £30,000,000 per month, against an average of about £11,000,000 per month before the war; and, at the same time, we are making advances to our Allies and to others which were estimated by my right hon. friend the Chancellor of the Exchequer in his Budget speech to amount to a total during the current financial year, to say no more of what is to come, to £423,000,000. We have also, be it remembered, alone amongst the belligerent countries, maintained our free market for gold, and, indeed, have exported a large amount to all parts of the world; and it is certain we are making purchases and undertaking commitments to provide credits abroad to an extent that can only be paid for by the further export of gold, or by the further sale abroad of securities and of our own debts.

"I only bring these facts, which are familiar, in this context to the recollection of the House in order to say once more that this is a burden which, rich as we are, resourceful as we are, we cannot go on discharging unless there is, both on the part of the Government as well as on the part of individuals, the most strict and stringent rule of economy, the avoidance of unnecessary expenditure, and the curtailment of charges which under normal conditions we should think right and necessary, and, if I may use a homely expression, cutting our coat according to the cloth with which we have to make it. I do not think—I am not a pessimist in this matter—our position compares unfavourably with that of the Governments who are opposed to us. The consumption of the German Government and the German nation has been far in excess of what they have been able to produce or import, and their stocks of available commodities are, from all we hear, rapidly diminishing and dwindling. And, further, the standard of life of the greater part of the population of Germany has been depressed to a point at which there is little or no margin of reserve. We in these respects no doubt apparently and ostensibly stand in a

better position, but I would once more say with all the emphasis of which I am capable, we cannot sustain the burden which this great war has laid upon us unless as individuals, as classes, as a community, and as a Government we make, and are prepared to make, far greater sacrifices than we have hitherto done in the direction of retrenchment and economy. There is another point in that connection I should like to mention before I deal with the question of men, and to which for a moment I desire to call the attention of the House, and that is the cost of the Army. The average cost of the Regular Army in peace time, on a very rough and an approximate estimate, used to be reckoned and is reckoned as about £100 per head per annum. I am quite certain that I am using a very moderate and more than moderate figure when I say, in the condition which now prevails, the complete cost per head of the Army, the vastly increased Army which we are now maintaining, is somewhere between £250 and £300 per head. I do not want to go into details. I purposely said it was an approximate and a very rough estimate. That is a fact which everybody ought to bear in mind."

TWO PREMIERS' SPEECHES.

We have had this week speeches from the Prime Ministers of our own country and of France. Each has been well received; but we are bound to add that the French Chamber showed to much greater advantage than the British House of Commons. It is true that the circumstances under which the two Premiers spoke were very different. M. Briand has just assumed office, and his object was to set before the Chamber the policy he intends to pursue. It was exceedingly to the purpose; and those who had the pleasure of listening to it tell us that it was one of the greatest oratorical performances that has been heard in the French chamber for many a day. He spoke amidst repeated cheers; and when the vote was taken there was but one single dissentient amongst between 500 and 600 members present. M. Briand spoke briefly and decisively. In the present condition of things, he said, no true Frenchman could recognise parties amongst the men of France. Every citizen of the country was equally interested in maintaining her independence and her integrity. Therefore, all parties were alike to him; and to all parties, consequently, he appealed for support. He saw only Frenchmen, and he reckoned upon the help of every citizen of France. The response was as nearly unanimous as could be expected. On the other hand, Mr. Asquith dealt largely with the criticisms which have been directed against his Government with increasing pertinacity for several months now. We venture to think that the time for criticism has not come, and that the French Chamber showed an example that it is very desirable indeed the British House of Commons should emulate. That there have been grievous mistakes made in the conduct of the War we do not for a moment dispute. But in every war the same statement could be made with equal justice, often with very much greater justice. The circumstances were new. Nobody except the aggressor was prepared. Nobody even expected war in the immediate future. That Germany was preparing with great vigour and great haste every well-informed man knew. But that she would plunge into one of the greatest conflicts Europe has ever witnessed, in the very middle of 1914, we venture to say that outside the Kaiser's immediate confidants nobody anticipated. Therefore, Germany took her adversaries all by surprise. And as she was as nearly prepared as it is possible for human beings to be, it is neither surprising nor very condemnatory that her opponents showed to a disadvantage during the earlier part of the conflict. We fail to see, then, either the seasonableness or the usefulness of the criticism which is being indulged in, and which even Mr. Asquith's admirable speech has not silenced. The time will come for criticism. But it will not come for just criticism until we have full information before us. At the present time criticism is certain to be unjust, and is highly likely to be [illegible] Minister's speech one illustration of the certainty that criticism just now must be unjust. Everybody is aware that the public, or, at all events, the censorious public, had made up its mind that Mr. Churchill had practically on his own authority begun the attack on the Dardanelles. Disagreement between himself and Lord Fisher was regarded as proof positive of the charge made against him. Yet on Tuesday last the Prime Minister told the House of Commons in the clearest and most forcible language that the expedition to open the Dardanelles had been fully discussed by the Cabinet; that the whole of its members were responsible for it; and that he himself took his own full share of responsibility. Now if such a charge has so widely been believed in this particular case, is it not practically certain that we are grossly mistaken in many other of our assumptions? The censorship has been so strict. All information likely to benefit the enemy has been kept back. In short, we have been living in such complete ignorance that it is impossible that we can judge with fairness. Therefore, the reasonable thing is to abstain from criticism for the moment, and to do as the French Chamber has just pledged itself to do, namely, to support the Government through thick and thin.

With regard to the merits of the Dardanelles expedition, we also think that the best service that can be rendered to the country is to reserve judgment. The Prime Minister told the House of Commons on Tuesday that not only had the case been very fully considered by the Cabinet, but that Lord Kitchener had informed his colleagues that he could not supply a military force; and, lastly, that the British Admiral on the station had given it as his opinion that the Dardanelles could be forced by the Fleet. We do not [illegible] to say that these facts justify the action that has been taken. What we do maintain is that they show that all the Cabinet had full opportunity to judge as to the propriety or impropriety of the policy adopted, and that they had the opinion of an expert upon the spot, that the thing could be done. Therefore, the conclusion we draw is that until still fuller information is before us we had better reserve judgment, holding that the argument in favour of action was very strong. In the first place, we had shown ourselves the friend and protector of Turkey for several generations. We had a right, therefore, to expect from Turkey at least neutrality. Yet, without provocation, the Turkish Government declared war against the Entente Allies. Naturally, having done so, it prepared expeditions against Egypt and against the Persian Gulf; and, therefore, we had the very strongest motive for taking energetic measures to prevent Turkey from doing us exceedingly great damage. In addition to this, we knew that Turkey was doing her best to stir up Mohammedan opinion all the world over against England. Lastly, the price of wheat was exceedingly high. There was a cry at home that the poor were being starved through the inaction of the Government. At the same time, Russia had one of the finest harvests she had ever been favoured with. But she was unable to export that harvest because the Turks had closed the Dardanelles against her. No fair-minded man will for [illegible] strong argument in favour of the policy adopted. But the fair-minded man who wishes to judge everybody according to his deserts will bear in mind, at the same time, that, strong as these arguments were, there were naval and military arguments on the other side which, likewise, were strong. The facts being so, fair-minded men will reserve their judgment until the whole truth is before them.

There is another point of view which should not be left out of account. And it is that the British

Empire is only one of the Entente Allies. All the Allies had pledged themselves to consult carefully; to respect in every way the opinions, susceptibilities, and claims of one another; and, finally, not to make peace without the consent of the Allies. No one Ally was to make peace, that is to say, without the consent of all. Therefore, the question of the Dardanelles, though it touched British interests very closely, was by no means an exclusively British question. The world had before it the clearest demonstration that the freedom of the Straits is of the very utmost importance to Russia. Russia was engaged in reconstituting her Fleet and reorganising her Army. She had openly declared that she had not completed either task. And while she was busy pushing them on she was at the same time unprepared for a great war. Therefore, it was notorious to all the world that she needed immense supplies of munitions, etc., which could be forwarded to her on a sufficient scale only through the Dardanelles. Lastly, she had a magnificent harvest, which practically was thrown upon her hands simply because the Dardanelles were closed against her. There could not be a stronger case, then, than Russia had with regard to the Dardanelles. We do not profess to know what was the policy urged by Russia. When Russia finds it convenient to lay her whole case before her people she will, no doubt, do so. In the meanwhile we are all in the dark as to whether she pressed the attack upon the Dardanelles, or as to whether, not being prepared to send a great expedition herself, she preferred that the matter might be postponed. Clearly, then, it is perfectly obvious that nobody can judge the facts with even a semblance of fairness until he knows who it was that urged most strongly the attack upon the Dardanelles and whether the arrangements brought forward were not so convincing that any one of the Allies would have incurred the gravest possible risks if it had refused to act. We have spoken so far as if the case lay only between ourselves, Russia, and the Turks. But we must not leave out of account that France was equally interested and that she risked her Navy just as we did. He must be either a fanatical partizan or a blind reasoner who maintains that a policy which was supported by France with her Navy, although she had no special interest in it, was absolutely indefensible in regard to our own country.

THE GREEK CRISIS.

On Wednesday M. Zaimis, who had held office only four weeks, resigned in consequence of a vote of want of confidence in the Greek Chamber. The general expectation is that there will be an appeal to the constituencies. But that course would seem to be utterly unconstitutional. It will be in the recollection of our readers that M. Venezelos had adopted a policy which seemed to commit Greece to the Entente Allies and against the two Central European Empires. The King expressed his disapproval of the policy of his Prime Minister, and M. Venezelos resigned. The new Ministry that came in made themselves practically the mouthpieces of the King, and it will further be remembered that the King became seriously ill. During this time there took place a General Election which, one would think, was timed as favourably for the King as was possible. In the first place, the King's illness excited widespread sympathy with him. In the second place, M. Venezelos did not directly take a very active part in the agitation which attended the elections. And, in the third place, the influence of the Crown was used to bend to his wishes the voters in those districts which, in consequence of the late two Balkan wars, had been added to Greece. They, not unnaturally, voted as they were instructed by the Government. Yet, in spite of all these advantages, the majority of the Chamber is in favour of M. Venezelos and against the King and his party. The Vote on Wednesday, which has brought about the crisis, was raised unexpectedly; but there can be no reasonable doubt that M. Venezelos felt that his position was absolutely untenable, and that he must either maintain his own policy or admit that he had been altogether in the wrong during his struggle with the King. Very naturally, and very properly, he defended his own policy, with the result that the King's party was defeated by a majority of 33 in a house of 264 members. Of course, the King has the right to dissolve Parliament. But whether he will gain anything by doing so remains to be seen. Of course, he will give proof to his brother-in-law in Berlin that he has done everything in his power to carry out the conspiracy between them. But that he will be able to change the opinions of his people seems extremely improbable. So far as can be judged at this moment, the large majority of the Greek people are in favour of the Entente Allies and opposed to the King's policy. It seems, therefore, as if the King were courting a grave defeat by the course which it is expected he will follow. M. Venezelos has a very strong argument beyond all the interests of Greece on his side. It is that there is a treaty between Greece and Serbia definitely pledging Greece to help Serbia if the latter is attacked by Bulgaria. Serbia has been attacked by Bulgaria without provocation, and yet Greece refuses to fulfil her treaty obligations. In the face of all this, one can but wonder that public men in Greece should, for the sake of winning the Royal favour, advocate an appeal to the public. But so many strange things happen in the Balkans that perhaps the wisest course for all parties is to wait and see what will be done. The decision of this crisis will, no doubt, exercise a very great influence upon Roumania, for the circumstances would be materially changed if not only the Entente Allies all send contingents to support Serbia, but if, likewise, Greece throws in her lot with the Entente Powers.

THE BALKAN QUESTION.

Mr. Asquith on Tuesday did not give as much information respecting the Balkans as we all wished to receive. But we are quite ready to believe that he told the House as much as it was advisable to tell at present. Much of the unwise criticism which is being directed against our Government relates to the Balkans; and we confess that there is a great deal which in our present ignorance appears to be greatly in want of explanation. But we hold with M. Briand that this is not a time either for criticism or for explanation. Our sole duty at the moment is to do everything possible to beat down the arrogant enemy that sprang a great unprovoked war upon the world. If we are to criticise at all, clearly we have to go back to the time when Lord Beaconsfield and Lord Salisbury were in power, and practically allowed Austria-Hungary and Germany to do what they pleased with the Near Eastern Question, as it used to be called. Germany and Austria have pitchforked German princelets on to the thrones of three of the Balkan States. And clearly from that fact most of our present difficulties spring. If, then, we are to criticise bitterly we must go back a long way in the past. But what good such criticism would do we fail utterly to see. There were altogether four Great Powers intimately interested in the Balkan question—interested indeed, so intimately that each one believed it worth its while to fight a great war rather than allow any settlement of that question that would not be favourable to itself. These four Powers were the British Empire and Russia on the one hand, and Germany and Austria-Hungary on the other. We leave Turkey herself and the Balkan States out of the question, because none of these were capable of enforcing a policy of their own. The real policy had to be decided by the four Great Powers who believed themselves to be so imperatively interested. We do not in the least know what the diplomacy

of any of the Powers has been since the War was so suddenly sprung upon the world. We can guess a great deal. But guessing is a very different thing from knowing. We see that the bankers of Berlin lent a large sum of money to Bulgaria, and that Bulgaria ever since has been preparing for the course she has taken. Who allowed this to go on we do not know. Was Russia so certain of her own influence over the Bulgarians that even to the last she refused to do anything in the nature of coercing the Bulgarians? Or was Sir Edward Grey so confiding in the promises of King Ferdinand that he did not think it necessary to move? Outside the diplomats concerned, we doubt whether there is a man in Europe who could answer either question confidently. All we know is that for more than a century Russia has been the patroness of the Slavs; that she has spent blood and treasure on a lavish scale in freeing them; and that, therefore, she had a very good right to expect that her word would carry greater weight than the word of any other Power. But however the facts may be, King Ferdinand has turned upon the deliverer of Bulgaria, and he has been followed by his subjects. The treachery is grave in the extreme. We do not see, however, how it can be mended either by ignorant criticism of the past or by empty fury regarding the present. The real question is, What ought to be done to set right a very entangled situation?

M. Briand was on Wednesday rather explaining the policy he intends to pursue in very general language than indicating any particular step for dealing directly with the Balkans. Mr. Asquith was replying to bitter, ignorant and useless criticism, which has been going on for months, and which had to be dealt with at great length. Therefore he had not very much time for dealing with any of the particular questions he spoke upon. He gave us, nevertheless, a good deal of very important information. He showed us, in the first place, that he and his colleagues are fully alive to the great importance of the questions relating to Constantinople, Egypt, and the Persian Gulf. We have, of all the Powers, the strongest present interest in those regions. Germany hopes to oust us and take our place. Russia, likewise, expects to have even greater interests than she has at present. But, looking at the facts as they stand to-day, the Constantinople, or Balkan, or Egyptian Question, or whatever title is to be given to it, interests the British Empire more than any other State in the world. Our road to India, as we said last week, lies through the Mediterranean, the Suez Canal, and the Persian Gulf. We must defend India come what may. Therefore, it is a question of life and death to us. Moreover, it is to be recollected that our communications with the great Australian Commonwealth and with New Zealand also lie through the Suez Canal. The very life of the British Empire, therefore, depends upon our decisively crushing the enemy which is aiming at our very existence. It is, consequently, with the very greatest satisfaction that we learn from Mr. Asquith that the Government is determined to do whatever may be necessary to win this War. He even went the length of saying that though he is as strongly opposed to Conscription as any man he would not shrink from Conscription if he were convinced that it is necessary for winning the War. On that point every British subject we suppose will support him. We ourselves, like Mr. Asquith, are opposed to Conscription. But if the War can be won only by Conscription we are prepared to vote for it; and we doubt if there is any loyal British subject living who would not do the same. The War must be won; and, therefore, whatever is necessary to win it must be done. We trust, however, that Mr. Asquith is right; that Conscription will not be necessary; that all the men required will come forward of their own free will; and that, in a short time, what seems now a most formidable question will be seen to be the last flicker of an over-bold adventurer.

British troops have already been forwarded to support the Serbians. The French Government was better prepared than we, and it has been in a position to send forward troops to help the Serbians. As yet we have not heard of any British infantry having reached the Front. But British cavalry have joined, and we make no doubt from Mr. Asquith's language that everything possible is being done to hurry up large reinforcements. The Serbians are showing splendid qualities in defending their country. They have been strengthened in their resolve by the arrival of Allied assistance. How soon a really considerable British force will arrive we have no means of judging. On Tuesday Mr. Asquith told the House of Commons that 13,000 men had been landed. But 13,000 men is a very small force. We want a great deal more. Whether Italy will contribute a contingent is not yet known. Neither is it certain whether Russia will be in a position to act with vigour. It has been stated that the Russians have not confined their action to a mere bombardment of Varna—that they have landed troops. That would be a very important fact indeed, if confirmed, for, ungrateful as the Bulgarians have shown themselves, it is incredible that all memory of the services rendered to Bulgaria by Russia has passed away. Therefore, it is, to say the least, possible that Bulgarian troops might refuse to fight against the Russians if the Russians landed and offered such terms to Bulgaria as might be accepted by a high-spirited people. Meanwhile, we have no knowledge of what is likely to happen either in Greece or in Roumania. That the Greek authorities are very friendly to the Entente Allies appears to be undoubted. And that in allowing us to land at Salonika Greece has risked offending the Central European Empires is likewise evident. But we know nothing of the real facts. There has been a report that Russia has offered Bessarabia to Roumania. If that should be confirmed it would be an exceedingly valuable and important fact, for there are a million of Roumans in Bessarabia, and naturally Roumania has longed for the reunion of Bessarabia since it was taken from her after the Russo-Turkish war. There is, therefore, a possibility that even yet Roumania and Greece may come to the assistance of Serbia. In that case the rash attack upon Serbia would prove to be as wild as it appeared to most well-informed observers when it was begun. The position is complicated by the fresh Greek Government crisis.

CANADA.

The condition of no country in the world presents a more striking contrast to its state a year ago than does that of Canada, and perhaps no country will derive greater economic advantage from the War in proportion to its population than Canada. The first effect of the War was disastrous. For some years previously Canada had been engaged on a policy of active expansion, and, although her programme was nearly finished, she still needed substantial amounts of money for the purpose of completing railways under construction and finishing improvements to towns and cities. The financial paralysis at the outbreak of war, and the difficulty experienced in raising new capital, stopped business from one end of the country to the other; and just at this moment the crops of Canada were deficient. After a time, however, matters began to show some improvement, in consequence of the advance in the price of wheat and the ability of Canadian towns and industries to borrow in the United States. Nevertheless, in spite of all the compensation, the effect of the War was severe for some months, and trade was extremely depressed. Perhaps the best measure of trade contraction was reflected in the gross earnings of the Canadian Pacific Railway, which for the twelve months to June

last showed a decline of $30,950,000, or 24%. This situation brought about great economies, and as these economies were supplemented by substantial orders for Canadian manufactured goods given by the British Government, the situation began to mend. In 1914 and in previous years the activity of trade in Canada was due for the most part to the importation and expenditure of vast quantities of capital. At the present time the recovery is due to the greatness of Canada's own productions and to the economy of her consumption. The remarkable change brought about in conditions in Canada is reflected by the movements of her foreign trade. In the twelve months to the end of August 1913 the country's imports for consumption were as much as $661,000,000, while her exports were only $370,000,000, and there was an excess of *imports* over exports of $291,000,000. In the past twelve months to August 1915, however, the net imports have been only $372,000,000, while the exports, in spite of bad crops, have been worth $460,000,000, and there has been an excess of *exports* over imports of $89,000,000. The expansion in exports has come from the much higher price obtained for exported food and from the substantial quantity of manufactured goods purchased in Canada by the British Government. The really remarkable change in the financial situation of Canada as indicated by its foreign trade in the past year will be evident from the following contrast:—

Foreign Trade of Canada* (00,000's *omitted*). *Last Four Years.

Year to Aug. 31.	MERCHANDISE. Total Imports.	Pro-Ex-ports.	Net Imports.	Excess of Imp. or Exp.	COIN AND BULLION. Excess of Imp. or Exp.	TOTAL TRADE. Excess of Imp. or Exp.
	$	$	$		$	$
1915 ...	415,8	44,2	371,6	[illegible]	Imp. 27,7	[illegible]
1914 ...	549,6	39,2	510,4	Imp. 81,1	[illegible]	Imp. 75,6
1913 ...	[illegible]	[illegible]	661,1	Imp. 290,6	Exp. 19,5	Imp. 271,1
1912 ...	584,3	[illegible]	[illegible]	Imp. 245,9	Exp. 6,3	Imp. 239,6

But the improvement in the situation thus far shown gives only a faint idea of the further improvement that is likely to take place in the current year, when instead of poor crops the country has gathered a bumper harvest. It is calculated the wheat crop of Canada in the current year will be no less than 336 million bushels, against only 161 million bushels last year; that the oat crop will be 481 million bushels, against 313 million bushels, and that barley will give a yield of nearly 51 million bushels, against 36 million bushels. The crops of this year should yield about twice as much money as last year. For the purpose of showing the rapidity with which the cereal production of Canada is expanding we give the following contrast of the wheat, oat, and barley crops since 1900:—

Wheat, Oat, Barley Crops of Canada.

Yield.	Wheat. Bush.	Oats. Bush.	Barley. Bush.
1915 ..	336,258,000	481,035,000	50,868,000
1914 ..	161,280,000	313,078,000	36,201,000
1913 ..	231,717,000	404,669,000	48,319,000
1912 ..	199,236,000	361,733,000	44,074,000
1911 ..	216,826,000	366,764,000	54,089,000
1910 ..	145,991,000	286,782,000	42,900,000
1909 ..	165,787,000	328,415,000	48,811,000
1908 ..	128,648,000	258,480,000	47,749,000
1907 ..	93,105,000	217,463,000	44,430,000
1906 ..	125,505,000	205,462,000	47,134,000
1905 ..	106,097,000	185,261,000	41,094,000
1900 ..	47,868,000	108,015,000	20,323,000

Although the importance of the size of the crop in a year of good prices is very great, we attach even more importance to the expansion of acreage, for it is acreage that in the long run tells on quantity rather than the weather. Consequently, we note with much satisfaction that in the past year the acreage devoted to wheat has been increased from 10,294,000 acres to 12,986,000 acres, or over 25%, while the area devoted to oats has increased from 10,061,000 acres to 11,365,000 acres, an increase of about 13%. This additional acreage and the still greater increase of acreage that may be expected as the years pass, means a very rapid increase in the food production of Canada, that in years of adverse weather the crops will be much greater than in previous years of bad weather, and that in years of bumper harvests the yields will break new records. The existence of profitable prices for foodstuffs during the War and the probable continuance of profitable prices for some time thereafter are matters of very great importance to Canada. Had it not been for the War the increased acreage devoted to crops in the new countries in consequence of the great extension of railways in recent years would have brought about a substantial fall in prices—a situation which would have greatly increased the burden of the interest which Canada has to pay upon the great sum of British capital invested in the country. But in consequence of the higher prices of foodstuffs which have resulted from the closing of the Dardanelles, as well as from other conditions, the price of food instead of falling has advanced, and this has very greatly lightened Canada's interest burden. As far as can be calculated, there is about £700,000,000 of foreign capital in Canada, mainly British, and the interest burden of this is upwards of £30,000,000 a year. This interest would have been equal to a wheat crop of over 150,000,000 bushels sold at a dollar a bushel, or to a wheat crop of nearly 200,000,000 sold at 80 cents a bushel. The price of wheat, however, has risen, and Manitoba wheat is now quoted at about 114 cents a bushel, which with a crop of 336,000,000 bushels will give Canada an income from this one crop of no less than $383,000,000. Hence the country is able to meet the whole of its interest charges out of its wheat crop alone, with a big surplus. And wheat is only one of the products of Canada. It raises great quantities of oats, moderate amounts of other cereals, and very large amounts of cheese, butter, and eggs, and other dairy products. Moreover, it produces a great quantity of minerals, fish, lumber, and a substantial amount of manufactured goods. The largeness of the country's exports since February has been mainly due to the heaviness of its shipments of manufactured goods to the British Government. It is evident that in the current twelve months Canada's exports of manufactured goods for war purposes will reach a very large total. Having regard to the greatness of the crop, the high prices ruling, as well as to the heavy orders placed in Canada by the British Government for war materials of all kinds and descriptions, we should not be surprised if the value of Canada's exports in the current twelve months were nearly twice as great as they were in the twelve months to the end of August. Moreover, were the country at the same time to maintain the severe economy practised in the past twelve months and to keep down its imports, the excess of exports over imports would be a long way in excess of the $150,000,000 needed to meet interest payments on foreign capital. The extent of the excess of exports over imports will indeeed be governed mainly by the economy practised by the Canadian people. If they recognise that economy in Canada will be of very great value to the Empire in its existing struggle, doubtless they will continue to be economical. If they are economical they may not only be able to pay the whole of the interest upon British capital employed in Canada by means of their exports, but may have a substantial sum of money to lend

to Great Britain or to use in paying back to the Mother Country some of the capital she has supplied. That such a possibility is desirable will, we are sure, be recognised by no one more freely than it will be by the people of Canada. Were it possible for the Canadian people during the War to keep down their home expenditures and to redeem some of the capital previously supplied by Great Britain their position after the War would be greatly strengthened. Of course, no one is able to forecast the situation after the War, but most people anticipate a great emigration to Canada of men who, as soldiers, have led an open-air life, and who are not willing to return to office, mills, or mines. If this expectation is realised, Canada will then need a good deal of new capital to take care of the newcomers. Therefore, if during the War she strengthens her financial position by repaying a part of the great sum of capital obtained prior to the War, her ability to get new capital after the War will be very much increased. Indeed, she will be able to get the capital for herself in some measure by re-selling to the British people the securities she may now be able to buy. There is, moreover, a further reason for economy. It is obvious that the British people cannot continue their present great purchases of goods from abroad unless they are able to pay for some of them, at any rate, in securities. The United States has shown her willingness to take payment in securities for substantial amounts of goods, and the Allies will necessarily purchase goods from those countries which are able and willing to take securities in payment rather than from those countries which demand payment in cash. The securities which Canada could take when it has the large favourable trade balance we expect she will have in the current season with her great crops and large output of manufactured goods, will be her own securities, either Canadian Government, or municipal, or railway, or industrial. Of course, Canada might prefer to subscribe to a British Government loan issued jointly in the United States and Canada, free of income tax. But that is a matter that can be discussed when the trade balance of Canada is large enough to enable her to purchase securities. If her people with renewed prosperity expand their consumption, it is obvious that Canada may not have a trade balance more than sufficient to provide interest on the foreign capital employed by her. Should Canada refrain, however, from further railway construction or town-planning or other works entailing large expenditures, and the Canadian people continue to be economical in their domestic expenditures, it is possible—indeed probable—that during the War Canada may be able to purchase back from Great Britain a large part of the securities which British investors have purchased in recent years.

The improving conditions in Canada are reflected in the pronouncement by the Finance Minister, the Hon. W. T. White, that the Government intends to issue an internal loan for the purpose of providing part of the money needed to meet the country's war expenditure. Of course, such a step will be all to the good, as hitherto the British people have found not only money for themselves and their Allies but for the Colonies, and if Canada can finance her own war expenses it will considerably reduce the burden upon Great Britain. We are not without hope, however, that Canada will not only be able to meet her own internal expenditures, including the money for the War, but will out of her favourable trade balance be able to repurchase a substantial amount of securities from this country.

For the purpose of showing the steady growth in the exports of Canada since February and the very great expansion that will probably be shown in the export trade of Canada in the coming twelve months, in consequence of the greatness of her crops and the largeness of her output of manufactured goods, we give the following:—

Recent Court of Monthly Foreign Trade of Canada (00,000's omitted).

Month	Merchandise		
	Imports.	Exports.	Exc. of Imp. or Exp
	$	$	$
Aug., 1914	44,4	32,0	Imp. 12,4

CONSOLIDATED GOLD FIELDS.

DRASTIC writings off effected in the two years to June 30, 1913 and 1914, not only absorbed the whole of the £2,000,000 of reserves that this Company had built up, but entailed the absorption of over £660,000 of the profits shown in the two years. In respect of the year to June 30, 1914, that is, before there were any signs of the present huge conflict, an interim dividend of 5%, absorbing £100,000, was declared in the February on the £2,000,000 of Ordinary capital. In the circumstances no final dividend was paid for the year. In respect of the year to June 30, 1915, no February interim dividend was paid, but a final dividend of 7½%, requiring £150,000, has this week been declared, such dividend being, as usual, free of income tax. The actual profit of the year was insufficient by a little over £4,000 to provide for the dividend, and the balance required has had to be taken from the unappropriated profits, there being only £80,088 carried forward, as against £84,472 brought forward. A contrast of the results of 1915 with each of the two previous years ended June 30 is set out below:—

Year to June 30	1915	1914	1913
	£	£	£
Balance of profit for year to June 30, after providing for Debenture interest, Administration, &c. ...	[illegible]	[illegible]	[illegible]
Prof. [illegible] Government [illegible]	[illegible]	[illegible]	161,341
Net profit	[illegible]	[illegible]	631,005
Interim div., 5% (1915 Nil; 1914 5%; 1913 5%)	100,000	100,000	200,000
Final Div., Nil; 7½; 15	Nil.	150,000	300,000
	[illegible]	Cr. 150,000	Cr. 431,005
Brought forward	[illegible]	[illegible]	[illegible]
Taken from reserve		150,000†	*
		[illegible]	[illegible]
Depreciation written off	-	[illegible]	402,201*
Carried forward ...	80,088	[illegible]	[illegible]

For the year to June 30, 1913, £402,201 was allocated to depreciation from the profits of the year. This writing off, marked *, did not figure in the profit and loss account, but was mentioned in the report. In addition £1,000,000 was taken from the reserve fund and applied to depreciation, thus bringing the total writings off for the year to £1,402,201.

The position for the year to June 30, 1914, marked †, gives the profit and loss account showings of the sum of £259,136 allocated to depreciation from the profit of the year, and £150,000 taken from reserve. In addition, a further £850,000 was taken from the reserve fund and applied to depreciation, making the total writings off for the year £1,259,136.

As to the present position of the assets, the notice *re* the dividend announcement calls attention to the policy of the Company in valuations, it stating that

"investments stand in the books at average cost or under, and all shares are taken into account at prices below those current at the date when the accounts were made up." The report and accounts, it is intimated, will be posted to shareholders on the evening of November 6, and the annual general meeting will be held on November 16.

A STOCK EXCHANGE MOVE.

A slip has been issued to members of the Stock Exchange, bearing neither name, date, nor address, setting out that a general meeting of members will be held in the Settling Room on Wednesday, November 10, at 3.15 P.M., when the attendance of members is requested.

Whatever may be the subjects to be considered at such meeting, and by whom the meeting is called, we cannot say; but it is rumoured that one of the subjects to be discussed is the position of naturalised aliens of enemy countries who are members of or who are associated with the "House." To a certain extent this meeting must be regarded as a domestic one, affecting members of the Stock Exchange alone; but if it be true that the naturalised alien's position is to be considered, then it is a matter that interests the general public as well as the Stock Exchange.

When a Stock Exchange member is elected the membership is made for the period of a year, and at the end of each Stock Exchange year application for continuance of membership for a new year has to be made. If any grave transgression of Stock Exchange etiquette has been perpetrated by a member, on the presentation of his application for continuance of membership it is quite within the province of the Stock Exchange Committee not to accede to the request. A Stock Exchange member, as a condition of being so, has to be amenable to the rules and regulations of the Stock Exchange, and a member, so long as he is one, cannot take action in the Courts, even if dissenting from a decision of the Stock Exchange Committee. But if it be the case that the application of a member for renewal of membership is not acceded to, after the year expires, and he is no longer a member, there is the possibility that, being no longer amenable to the law of the Stock Exchange, he would feel himself at liberty to take legal action. In case this matter comes within the discussion on Wednesday next, it would be as well to bear this legal point in mind. It may have to be considered whether a request should not be made for legislation to protect the Stock Exchange from legal action on the part of naturalised aliens of enemy powers who, in case of inability to secure re-election, may resort to appeal to the common law for redress of grievances, damages, or what not.

HONGKONG AND SHANGHAI BANK.

We find that in compiling our statements concerning the Hong Kong and Shanghai Bank for our recent Banking Number, we inadvertently included among the acceptances of this Bank an item of £11,584,790 in respect of liabilities on bills of exchange rediscounted. The Bank includes in its balance-sheet a statement that it is liable for these bills discounted, but in dealing with the other Eastern banks the amount of the rediscounts was not included in the acceptances. Hence in making comparisons we would specially ask our readers to note the statement we gave showing that the acceptances of the Bank in 1914 amounted to $138,766,000 included the bills rediscounted, and that the acceptances only were $7,120,000.

Compania Sansinena de Carnes Congeladas.—Further dividend of 15%.

Financial Notes.

In the course of his speech on Tuesday Mr. Asquith referred to the great importance of stimulating the export trade of the country. We hope most earnestly that he will not content himself with mere fervent hopes, but that he will carry measures to effect what he admits to be so important. We are not unreasonable enough to ask the Prime Minister in the middle of so formidable a war to give his personal attention to the subject. But we earnestly hope that, just as he formed a Munitions Department when the necessity for a much increased manufacture of munitions became evident, he will appoint somebody who is able to make things go, like Mr. Lloyd George, to look after and to improve the export trade of the country.

It is all very well expressing either a threat or a warning, as Mr. Montagu did a little while ago, that people will somehow or other have to contribute half their incomes to the State. Mr. Montagu ought to remember that contributions to the State can only be made out of income; and if income is allowed to run down, the contributions to the State, whether voluntary or involuntary, will decrease likewise. Furthermore, Mr. Montagu, before threatening the public—and several Ministers are too fond of threatening—ought to have asked himself how he was to set about extracting half their incomes from all the people of the United Kingdom, supposing they are unwilling to pay.

In the morning papers on Thursday last there was reported a meeting of the creditors of a nobleman, and it was stated that the larger part of his debts consisted of taxes which could not be collected. Now, if in this particular case the Government failed to collect the taxes, we would again ask Mr. Montagu how he proposes to collect half the incomes of the whole population of the United Kingdom whether they like it or not. All these threats are foolish in the extreme. And if Mr. Montagu had a little more experience in office, and had a little more control over his tongue, he would avoid making them. That the cost of the war is enormous every well-informed person is aware. That the cost must be covered somehow is equally notorious. The difficulty of compelling unwilling persons to pay, however, is so great that the Law Courts furnish us with evidence from time to time that even the Government itself is unable to extract the moneys. That being so, surely it is the wise course to do what the Government alone can do, namely, to stimulate exports.

Private manufacturers find the bankers in the present condition of things unwilling to lend. Therefore, they are unwilling themselves to engage in anything like large expenditure. Everybody thinks that everybody else ought to work more actively and increase exports. But everybody is equally resolved that he will not do so himself, but will leave it to his neighbours to do what he admits to be the duty of

all, but which he is afraid to engage in himself. The Government, then, is alone able really to stimulate exports, for the Government has the whole credit of the United Kingdom at its command, and it has, moreover, the power to set men working practically as it likes. It can send men to the Front, or send them into the mines, or into the workshops. The Government, therefore, can stimulate exports, and nobody else is in a position to do so.

There seems really to be going on a very considerable improvement in Mexico. The exchange, which at one time was down to 4*d*., has risen to 10*d*., a remarkable change, and it will be recollected that the South American Governments have all decided to recognise General Carranza as the *de facto* President of Mexico. That is a very considerable step in advance. If all the American Governments, including that of the United States, recognise him, and if he is able to maintain his authority, it is possible that Mexico may escape from her difficulties and once more the law may prevail.

Probably the explanation of the improvement that has set in is that the Mexican people are so disillusioned by the long anarchy which has prevailed that they have made up their minds that civil war, at all events, must end. If they have done so, each one will turn to make a livelihood for himself in some way or other; and as soon as industry begins again, and order is maintained, there will be a recovery. The country is rich and naturally ought to be exceedingly prosperous. Whether the people are so utterly disgusted with anarchy and so resolved that peace and the industries of peace alone give a promise of prosperity for the future remains to be seen. But if it is so, the country is at last to be congratulated.

We learn that negotiations are on foot for enabling Salvador to pay the coupons which ought to have been paid last August. Of course, it is impossible at present to judge whether the attempt will succeed. There are many difficulties in the way. But it ought to be evident to all well-informed people that repudiation of debt is one of the costliest things that a nation can do, and, therefore, that it is of the utmost importance that faith should be kept with creditors and that a serious effort should be made to pay the coupons as early as possible.

Banco Popular Argentino.—The balance sheet of the Banco Popular Argentino to September 30 last shows paid-up capital £924,706, increase over the corresponding period last year £6,601; deposits £1,886,549, increase £184,303; reserves £464,284, decrease £36,409.

Royal Bank of Canada.—Dividend of 3%, being at the rate of 12% per annum on the paid-up capital stock for the three months to November 30.

The National Bank of Australasia.—Dividend of 7% per annum declared on both Preference and Ordinary shares; £20,000 placed to reserve fund, £5,000 to reduction of bank premises account, £3,000 to officers' provident fund, and £28,750 carried forward.

SOUTHERN RAILWAY.

The Southern Railway has emerged from the most trying year it has ever experienced in a manner that reflects great credit upon all engaged in operating the road; and, notwithstanding the troubles that had to be contended with, the physical condition of the entire property has been further improved, so that when traffic resumes its normal proportions it will be operated more economically than ever before. No railroad in the United States is more dependent for its prosperity upon cotton than is the Southern. When the War broke out the South was preparing to market the largest crop ever gathered; but in view of the blow to the cotton-growing industry, and the exceedingly low level of price for the staple, business activities in the territory served by the Southern Railway were for a time practically stunned. Not only has the Southern the largest tonnage of cotton and enjoys a longer haul of that commodity than any other road, but when the price obtained for cotton is relatively high and the cotton-growing community is prosperous, the road conveys enormous quantities of miscellaneous goods of all kinds. The set-back that occurred last year to the cotton industry has already passed away, as the new crop of this year is much smaller than a year ago and the demand is greater. Although a considerable quantity of last year's crop remains unsold, no difficulty is likely to be experienced in disposing of all that is available at very profitable prices, and the income of the South from the smaller crop will be much greater than was its income from last year's big crop.

In 1907 the Southern Railway commenced a great scheme of improvements, which unfortunately had to be suspended for a time in consequence of the banking crisis of 1907-8; but with the passing away of that disturbing factor this programme was pushed forward energetically, and is still being continued, money for its prosecution in the past year having been raised shortly before the outbreak of hostilities. By means of the substantial improvements to the system a much greater amount of traffic can be handled without much additional expense. The work has included the building of a second track on congested portions of the main line, the straightening of lines where formerly curvatures existed, the reduction of gradients, the construction of cut-offs, the building of more powerful locomotives and freight cars of greater capacity, the installation of automatic electric signalling, the placing of heavier rails upon the track, the separation of grade crossings and the enlargement of terminal and siding accommodation, not to mention minor improvements. As a consequence, the line is

* 2½% paid in cash April, 1914, and 2% in 4% debenture bonds.

better fitted than ever before to cope with the large amount of traffic expected to accrue to it in the not distant future without congestion such as was sometimes experienced in past periods of great trade activity.

The sudden change in the industrial situation of the South last year meant a loss to the Southern Railway of no less than $8,374,000, or nearly 12%, in gross revenue. The development of the loss was precipitous, July 1914 having shown a small increase, August a decrease of 1.2%, while for the four months from October to January the respective shrinkages were 18.47%, 20.02%, 19.97%, and 18.93%, but as the South regained its breath a gradual improvement occurred in the remaining months of the year. Such a situation naturally demanded radical action on the part of the management and a policy of severe retrenchment was inaugurated, the full effect of which could not, of course, be felt immediately; indeed, not until March last did the retrenchment policy manifest itself. However, operating expenses were reduced $5,407,000, or 10.4%, so that the loss in net receipts was brought down to $2,967,000, or 15.6%. After allowing for miscellaneous income, taxes, and interest and other charges, the net profit was reduced about $3,200,000. The amount of the profit remaining was, however, $1,656,000, a sum equal to 2¾% on the 5% Preferred stock, against the dividend on the Preferred and 1.37% earned on the Common stock in 1913-14. The last cash dividend paid was 2½% on the Preferred in April 1914, a further distribution of 2% made in October of last year having been in scrip bearing 4% interest and repayable in 1919. No distribution has since been made. The effect upon the Southern's earnings and profits of the disturbance to economic conditions in the South last year resulting from the war will be evident from the accompanying Income Statement.

Since 1908 a growth of 20.5% in the freight traffic—ton mileage—has been accompanied by an actual saving of 24% in freight-train mileage, the average revenue train load having been raised in the seven years by as much as 58% from 192.27 tons to 304.60 tons, a result which reflects both the improved physical condition of the road and equipment and the great trouble and increased skill of the officers in dealing with the traffic.

The roadway and structures were kept fully up to standard; indeed, their condition was improved during the year, while motive power and passenger equipment were also well maintained. There was, however, a certain amount of deferred maintenance in the case of freight cars which will have to be made good when earnings improve. In the aggregate 30.68% of last year's gross revenue was devoted to maintenance, against 30.24% in 1913-14. The greatest reduction in expenses was in conducting transportation, the cost of which was curtailed by $3,090,000, or over 11%. A factor which brought about a large part of the reduction in conducting transportation was the reduction in freight train mileage rendered possible by initiating a system of increased rating of locomotives, more especially on the branch lines. The Southern possesses a great amount of branch line mileage on which the average load of freight trains in the past has been very light as compared with the larger loads obtained on the main lines, but by means of the new rating the loads on the branches have been appreciably increased. Substantial economies were also effected in the fuel bill by reason of the improved type of locomotive now in use. How the expenditures of last year compared with those for previous periods is shown below:—

Operating Expenses of the Southern Railway.

Year to June 30	Gross Earnings.	Maint. of Way.	Maint. of Equipment.	Cond. Trans. portation.	Gen. Misc. Expenses.	Total Expenses.

1907	13·52	16·90	42·25	3·34	76·01
1906	13·28	16·01	38·79	3·27	71·35
1905	13·42	15·49	37·79	3·30	70·00

Now that comparison is being made with the poor results of 1914-15, improved gross receipts are being recorded, and inasmuch as expenses are still being kept well in hand satisfactory gains are occurring in net receipts. For the three months to September net earnings were $783,000 higher than for the corresponding period of 1914. The course of earnings and expenses since the war began, and with which comparison will be made in the coming months, will be evident from the appended statement:—

Course of Earnings and Expenses of Southern Ry since July 1914

In considering the future of the Southern it is necessary to take into account several factors. First, of course, is the recovery likely to be witnessed in the prosperity of the cotton-growing industry, and which should be accompanied by increased spending power, both upon passenger travel and for goods of

all kinds, by the inhabitants of the Southern States. Secondly, there is the probable growth of general traffic. Not only is the South producing year by year larger quantities of agricultural products of a diversified character, thanks to the energies of the officers of the Southern Railway, but those officers have also been responsible for attracting to the South vast numbers of new industries which are making for the steady development of the territory served. In the past year, notwithstanding the adverse conditions, no less than 519 new industrial plants were completed, additions were made to a further 219, and at the end of June last 57 new plants were in course of construction. Further, the bringing into operation of a new and up-to-date coal terminal at Charlestown, S.C., a port served by the Company's lines and expected to become of great importance in the future, should afford to the Southern an increasing share in the bituminous coal traffic. Hence, with a return of the spending power of the people of the South to a more normal level, with the greater output of agricultural products of all kinds, and with the bringing into operation of new industrial plants of various descriptions, the Southern may reasonably be expected to obtain a steadily increasing volume of traffic. The large number of new factories and mills opened for business on the Company's lines in recent years will be evident from the following statement:—

Industrial Developments on Lines of Southern Railway.

	Year to June 30—						
New Industrial Plants completed:	1915	1914	1913	1912	1911	1910	1909

Plants to which additions were made	219	266	222	197	141	163	123

* At end of June 1909 at least 10,000 manufacturing plants existed on lines of Southern Railway.

Apart from the general expansion likely to take place in industry and to bring additional traffic to the Company, special heed should be paid to the growth of cotton spinning in the South, where for the most part the mills are situated alongside the lines of the Southern Railway. Only a few years ago the number of spindles in the South was very small in comparison with those used in the New England States, but this disparity has now largely disappeared, and at the present time over 40% of the total spindles in the United States are in the South, and about 60% in the North. Moreover, the South, with its 13,000,000 spindles, is actually working up a larger quantity of cotton than is the North with 18,900,000 spindles. The growth in the cotton spinning industry of the South in recent years is shown below:—

Yr. to Aug. 31	U.S. Cotton Consumption. North. Bales.	South. Bales.	Total. Bales.	Comm'l. Crop. Bales.	Cotton spindles in U.S. North. Number.	South. Number.	Total. Number.

* Crop year to July 31.

Having regard to all the factors in the situation, the profits of the undertaking may be expected to show considerable growth in future, but although it is probable that for the current year the full 5% dividend on the Preferred stock may be earned, it is unlikely that distributions will be resumed until a considerable margin beyond that dividend is secured. However, no long delay is likely to occur before such a state of affairs exists, and at no distant date Preferred stockholders should again be receiving a return upon their investment. The price of the Preferred is now 69, and the Common is quoted 27½. At the end of June the Company had current assets, exclusive of materials and supplies, of $14,717,000, of which over $8,000,000 consisted of cash either in hand or on deposit. Current liabilities at the same date amounted to $12,685,000. In January next a small amount of old underlying bonds fall due, and will be replaced by 5% Consolidated bonds, and in February there will mature $5,000,000 of Short Term notes, which will also be taken care of.

The amounts and prices of the Company's principal securities, together with the yields afforded, are set out below:—

CHICAGO GREAT WESTERN RAILROAD

It is certainly somewhat refreshing in these days to learn that a railway company is in a position to commence the payment of dividends. Such, however, is the case of the Chicago Great Western Railroad, the directors of which have this week announced a dividend of 1% on the Preferred stock. No particulars are available as yet as to the period to which the dividend applies, but presumably it may be regarded as a half-yearly distribution for the current six months. After the thorough reorganisation of the former Chicago Great Western Railway and up to June 30, 1914, the Preferred stock was entitled to 4% non-cumulative dividends, but since July of last year the dividend has been cumulative. A complete change for the better has occurred in the physical condition of the undertaking under the present management, until now the service offered and the weight of the average freight train compare very favourably with those of the larger roads serving the same territory. The net profit for the year to June last amounted to $868,000, a sum equal to almost 2% on the Preferred stock, and little change has so far occurred in the current fiscal year. It follows, therefore, that the net profits must at least double before the full dividend on the Preferred stock is earned, and the prospect of such results being attained has never been brighter since the incorporation of the existing Company, the crops of the North-West in the current year being large and prices profitable. By the end of December arrears of dividend on the Preferred stock will amount to 5%. This stock is quoted in London at about 44, while the Common stands at about 18¼.

Bengal Coal Co.—Dividend at rate of 50%.

Longmorn (Genuine) Distilleries [illegible] of 5% on Ordinary.

Ledbury Rubber Estates—Interim dividend of 7½%, less tax.

Shotts Iron Co.—Dividend of 5*s.* per share, less tax, on Ordinary.

Scottish Tea and Rubber Trust.—Interim dividend of 4%, less tax.

BUENOS AYRES GREAT SOUTHERN RAILWAY.

THE financial and economic crisis in Argentina is mainly responsible for the disappointing results of the Buenos Ayres Great Southern Railway Company in the past twelve months. As a matter of fact the crops in the southern districts were good, the yield of wheat, barley and oats having been better than in the preceding year; but the restriction of credit and the uncertainty of commercial operations in the Republic owing to the War not only caused a marked reduction in general goods, which in normal times constitutes the Company's largest and most remunerative source of revenue, but also a considerably reduced passenger movement. Fortunately the Company was able to minimise the effect of these adverse conditions by reductions in expenditure; but efforts in this direction were to some extent neutralised by the abnormal rainfall throughout the Republic, which, following as it did an exceptionally wet season in the preceding year, caused serious damage to property and greatly interfered with the normal working of the line. In the circumstances it is surprising how well the Company has come through what may be termed the most eventful and trying period in its history. The decrease in gross earnings was £523,000, or 9.6%, but as this was accompanied by a saving of £213,000, or 6.7%, in working expenses the decline in net earnings comes out at £310,000, or 13.7%. Owing to the conversion of a large amount of Extension share capital into Ordinary stock, fixed interest charges on balance show a slight diminution, and as miscellaneous income was rather better, the loss of profit amounts to £290,000, or about 25%. Such a loss reduces the sum available for dividend from £1,127,000 to £838,000 only, a lower figure than has been recorded since 1901-02, when a profit of only £765,000 was earned. The merging of £5,590,000 of Extension share capital into Ordinary stock has certainly come at an awkward time, especially as up to now interest on a large portion of the new stock has been provided out of capital. The necessity of a further reduction in the dividend is, therefore, apparent, and even at the lower rate of 4% the sum of no less than £258,000 has had to be taken from last year's balance, and the amount now carried forward is lowered from £316,000 to £58,000 only. The income statement of the Company is set out beneath:—

Buenos Ayres Great Southern Railway.

Brought forward	316,000	473,000	136,000	137,000
Carried forward	58,000	316,000	473,000	136,000

As already stated, the falling off in traffic was mainly in passengers and general goods. The number of passengers carried diminished 4,268,178, or 15.5%, and the receipts therefrom declined £258,000, or 14.2%. Including luggage and parcels, which also show a diminution, the coaching traffic alone is responsible for fully one-half of the loss in gross receipts.

The enormous growth in the passenger traffic in recent years and the severity of the set-back in 1914-15 will be appreciated by a glance at the accompanying table:—

Passenger Traffic.

Year to June 30	No. of Passengers	Receipts per Passenger Mile d	Passenger Mileage	Passenger Receipts £
1915 ...	23,323,756	0·897	414,422,431	1,548,189
1914 ...	27,591,934	0·909	476,902,130	1,805,758
1913 ...	27,454,719	0·912	508,000,922	1,968,759
1912 ...	24,069,974	0·915	443,945,798	1,692,942
1911 ...	22,231,112	0·934	411,570,289	1,600,936
1910 ...	18,[illegible]	0·934	379,855,545	1,478,829
1909 ...	16,8[illegible]	0·948	348,947,794	1,378,702
1908 ...	15,879,030	0·929	347,239,410	1,342,674
1907 ...	13,[illegible]	0·920	323,629,579	1,241,129
1906 ...	9,999,203	0·967	269,129,935	1,084,004

With the exception of wheat, barley, and oats, most of the other items of freight traffic show decreases, a decline of nearly 550,000 tons in general goods, representing a loss in revenue of nearly £220,000, being the heaviest. The good wheat corp brought the Company additional receipts of £100,000, and the greater demand for cattle caused a larger volume of this important traffic to pass over the Company's system. To show the nature of the freight traffic and the relative importance of each individual source of revenue we give the following statement:—

Freight Traffic B. A. Gt. Southern Railway.

In two respects the Company was fortunate in the matter of expenditure—viz., an abundance of cheap labour and a drop of 11% in the issue price of coal. Maintenance expenses were less than 1% above those of 1913-14 notwithstanding the great but unavoidable cost of track maintenance due to the persistently recurring rains acting everywhere upon surfaces already saturated by the previous season's floods. Transportation expenses were reduced by about 10%, attributable partly to cheap coal and partly to a curtailment of 13% in train mileage, the latter item being particularly noteworthy as indicating the efforts made by the Company to work with increased economy. The saving of £213,000 in the total expenses is in itself satisfactory, but, coming as it does on top of a reduction of nearly £500,000 in the preceding year, is an achievement reflecting distinct credit on the management. The damage caused by the floods invo'ved an expenditure in repairs and renewals of £200,000, of which £165,453 was incurred during the year. This latter sum, however, has been apportioned between the casualty and reserve funds, the former of which has been entirely absorbed. For the purpose of showing the relatively large sums which the Company last

year spent on maintenance and the savings effected in transportation expenses we give the following statements:—

Working Expenses, B.A. Great Southern Railway.

Year to June 30	Gross Earnings	Maint. of Way	Cond. Trans. portation	Other Expenses	Total Expenses
	£	£	£	£	£
1915 ...	1,942,000	547,000	1,613,000	427,000	2,987,000
1914 ...	5,464,000	527,000	1,786,000	468,000	3,200,000

1907 ...	10·21	8·25	31·09	8·05	57·58
1906 ...	13·13	7·92	27·24	9·18	57·47
1905 ...	11·42	7·31	22·47	8·67	49·87
1904 ...	9·71	7·27	24·86	7·23	46·07

Included in the above maintenance expenditures are the following special charges for renewals:—

Special Renewal Charges.

	1914–15	1913–14	1912–13	1911–12	1910–11
	£	£	£	£	£
Permanent way & works	101,057	114,063	226,566	147,895	163,184
Locomotives	17,539	22,604	44,900	29,509	32,339
Carriages	15,138	18,143	36,038	23,524	25,956
Waggons	26,726	32,122	63,805	41,650	45,955
Pumps, &c.	2,297	2,677	5,317	2,657	3,380
Total	162,757	189,609	376,626	245,035	271,264
Percent. of gross receipts	3·3%	3·4%	5·7%	4·5%	5·4%

It will be seen that the Company has again apportioned as much as 3.3% of the gross receipts to special renewals, so that the real profit-earning capacity of the road may be regarded as approximately equal to the dividend of 4% distributed.

With regard to the future several factors have to be taken into account. Until the War is over it cannot be expected that the Company will get back to its normal results. But having regard to the enormous demand for the produce of Argentina and the high prices that are being obtained, the position is such that sooner or later a great wave of activity will pass over the country and renewed prosperity ensue. In his speech at the annual meeting of the Great Southern last week, Mr. David Simson, the Chairman, pointed out that in the first half of 1915 the balance of trade in favour of Argentina amounted to nearly £42,000,000. It will easily be realised, he stated, that if things go on at this rate for another year (and there seems no reason why they should not), the increase in the wealth of Argentina will be very substantial indeed, and she should therefore be in an excellent position the moment peace is declared to enter the world's markets with large orders which she cannot well place at present. When the country begins to make up for lost time by large imports the railway companies will benefit to the full and traffics will then show their old elasticity. At the moment, of course, everything depends on the size of the crops, and here, fortunately, the conditions are very promising. Over 5,000,000 acres are reported to have been sown this year with wheat and oats, or slightly in excess of last year's acreage, and according to latest advices the young crops generally are very flourishing though rather backward. By the law of averages a series of comparatively dry seasons should now be experienced in Argentina, and, as it usually happens that after a spell of wet weather the crops are unusually abundant, the outlook may be regarded as very promising.

A factor which, however, has to be noted is the uncertainty of the working expenses, for with the enormous rise in sea freights the price of coal has risen to a very high level. However, to meet this and other increases in working charges the Company has raised its tariffs as from October 1 by 10% on most classes of traffic. Even with this advance, objected to naturally by traders, tariffs are still well below the maximum the Company has a right to charge, and, as the value of the principal products carried over the system has been greatly enhanced by the War, the increase in freight charges appears to be a reasonable one, and is not likely to meet with any serious opposition.

Partly as a result of these higher rates the traffic receipts of the line continue to show considerable improvement, and since the beginning of July the increase amounts to £276,000, or 23%. The course of earnings monthly so far in the year will be seen from the table appended:—

Course of Traffic Receipts since July 1, 1912.

Month	Principal Crops Carried	1915–16	1914–15	1913–14	1912–13
		£	£	£	£

The current price of 84xd for the Ordinary stock to some extent reflects the more promising outlook, for on a 4% dividend basis the yield afforded is only £4 15*s.* 3*d.* per cent. Whilst it is not possible yet to tell how soon the Company will be in a position to raise the dividend beyond its present figure, all the evidence goes to show that within a short time a much better return will be forthcoming, and that sooner or later the Company will get back to its former position of being able to pay 7% dividends to its stockholders. The 5% Preference stock can be bought at 91½xd, and a yield of nearly £5½ per cent. is forthcoming. For absolute safety the 4% Debenture stock of the Company may be commended. The total fixed charges were last year covered about two and a half times, and as the combination of adverse conditions then obtaining is not again likely to be experienced the safety of the Debenture stock is unquestionable. The price is 81¼, and the yield exactly £5 per cent.

The capital of the Company is set out beneath:—

Security	Amount	Dividend	Price	Yield
	£	%	£	£ *s.* *d.*
4% Debenture stock	15,472,560	4	81¼	5 0 0
5% Preference stock	8,000,000	5	91½xd	5 9 7
Ordinary stock	29,090,000	4	84xd	4 15 5
Total	52,562,560			

ARGENTINE SOUTHERN LAND CO.—Dividend at the rate of 9 per annum, less tax.

BATAVIA PLANTATION INVESTMENT.—Interim dividend of 7½, tax free.

BRAMPTON BREWERY CO.—Interim dividend on Ordinary of 4 .

CHUBWA TEA CO.—Interim Dividend of 10% on Ordinary, less tax.

ILLINOIS TRACTION CO.—Dividend at the rate of 7 per annum on Common stock for quarter.

PERAK RUBBER PLANTATIONS.—Interim dividend of 1½ per share.

VALLAMBROSA RUBBER CO.—Interim dividend of 6*d.* per share, less tax.

MONERAKELLE RUBBER ESTATES.—Dividend of 12½, less tax.

Insurance Notes.

LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED.

All kinds of insurance business are now transacted by this comprehensive insurance Company. Fire business has always been its leading department, the life business is considerable in amount, and the more recent accident section has latterly become important. The opening of the marine department dates from 1911, when the Thames and Mersey Company (whose title suggests an affinity) was absorbed.

The total premiums shown in the Company's accounts for 1914, embracing all departments, amounted to £4,867,076, exceeding the corresponding figure for 1913 by £109,689. The increase was not all along the line, as the following comparative figures show:—

Department	Premium Income 1914	Premium Income 1913	Increase	Decrease
	£	£	£	£
Fire	3,098,721	3,136,588	–	37,867
Marine	337,017	309,196	27,821	–
Personal Accident	136,336	160,710		24,374
Employers' Liability (within the United Kingdom)	128,794	122,893	5,901	–
Miscellaneous	853,615	717,379	136,236	–
Life	286,673	274,220	12,453	–
Annuity	24,506	35,155		10,649
Leasehold	1,414	1,246	168	–
	4,867,076	4,757,387	182,579	72,890

Net increase, £109,689

The trading profit in the fire section, amounting to £83,165, was not as large as usual, representing as it did only about 2.7% of the premium turnover. In 1913 it had amounted to £306,168, or to about 9.7% of the premiums. Interest earnings on the fire fund amounted in 1914 to £88,976, and after the transfer of £172,141, the combined amount of trading profits and interest earnings, to profit and loss account the fire fund amounted to £2,239,488, consisting of reserve for unexpired risks, £1,239,488 (40% of the premiums), and (as in the previous year) an additional reserve of £1,000,000.

The marine account showed better results, the trading profit being £47,950 (about 14.2% of the premiums), which, along with interest earnings of £15,901, was transferred to profit and loss account. The marine fund thereafter amounted at the close of the year to £391,047, consisting of the reserve of £134,807 for unexpired risks, and the same amount of additional reserve as at the close of 1913—viz., £256,240.

The decrease in the personal accident premiums is rather unusual, and the profit shown is smaller than usual in a section which generally gives a larger trading surplus than is the case in other departments. After adjustment of the reserves for unexpired risks the trading profit seems to have amounted to £5,939 (about 4% of the premiums), and the interest earnings to £3,208, the total departmental profit thus being apparently £9,147. The sum of £12,194 was transferred to profit and loss account, and the additional reserve beyond that required for unexpired risks (£54,534) was reduced by £3,047 to £17,042, the personal accident fund at the close of the year amounting to £71,576, apart from £16,425 reserved as provision for outstanding claims.

The employers' liability business within the United Kingdom shows the handsome trading profit of £18,325, or about 14.2% of the premiums. It is evident that this Company, like others, is feeling the benefit of increased premium rates in this section, which used to be one of the least profitable to underwriters. The interest earnings amounted to £3,262, giving a total departmental profit of £21,587, of which £20,407 was transferred to profit and loss account and £1,180 was added to the additional reserve (inclusive thereof amounting to £25,759), beyond the reserve of £51,518 set aside for unexpired risks. At the close of the year the employers' liability fund amounted to £79,276, apart from £57,978 reserved for outstanding losses.

In the miscellaneous insurance account, where, it will be noted, there was a specially large increase in the premium income, the trading profit seems to have amounted to £22,274, or to about 2.6% of the premiums, or about the same proportion as in the fire section. The departmental interest earnings were £18,180, bringing up the total profits in this section to £40,454, of which £33,315 was transferred to profit and loss account, the balance of £7,139 being added to the departmental reserve (thereafter £150,000), apart from that for unexpired risks (£341,446). The relative fund at the close of the

year was £491,446, exclusive of £217,603 reserved for outstanding claims.

To the departmental profits above shown have to be added £19,914 from the members' life profits account, representing the share of the profits to shareholders arising from the last quinquennial valuation on December 31, 1913, appropriate to the year, and also £121,673, being the excess of net interest earnings credited to profit and loss account (£143,995) over income tax and charges (£21,322) debited to that account.

The total profits of the year appear, therefore, to have amounted to £448,768 as follows:—

Department	Profit from Trading	Profit from Interest
Fire	£85,165	£88,976
Marine	47,950	15,902
Personal Accident	5,939	3,208
Employers' Liability (within the United Kingdom)	18,325	3,262
Miscellaneous	22,274	18,180
Life	19,914	—
Profit and Loss	—	121,673
	£197,567	£251,201

£448,768

This has been apportioned as follows:—

1. In dividend at the same rate as for 1913, viz. 24*s.* per share, less tax, on 265,525 shares of £10 each with £1 paid (Subscribed Capital £2,655,250, Paid-up £265,525)	£294,068
2. Interest on 4 per Cent. Perpetual Debenture stock of £805,800	30,262
3. Interest on 4 per Cent. Thames and Mersey Debenture stock of £450,696	16,638
4. Added to employers' liability fund	1,180
5. „ to miscellaneous insurance fund	7,139
6. Transferred to investment fluctuation fund (thereafter amounting to £755,000)	73,933
7. Added to staff pension fund (thereafter £79,551)...	15,000
	£438,220
8. Less personal accident fund reduced by	3,047
	£435,173
9. Balance of Profit and Loss Account increased by	13,595
	£448,768

The balance of profit and loss account carried forward to 1915, after provision for the full year's dividend, is £882,465. The general reserve fund is maintained at £1,000,000. Adding these to the fire fund of £2,239,488, we have a total of £4,121,953; and as the specific reserve for unexpired fire risks is £1,239,488 (40% of the premiums), the balance of £2,882,465 may be regarded as the Company's conflagration reserve, which discloses a very strong financial position.

The Company's new life business in 1914 amounted to £575,154, of which £36,500 was reassured, its net retention at its sole risk being thus £538,654. The total life premium income, increased by £12,213, amounted to £286,673, expenses of management, inclusive of commission, being limited by a liberal arrangement to 10% of the premiums. The death claims in 1914 were much lighter in amount than in 1913 (which is a somewhat unusual feature considering the War), having been for £176,907, as compared with £267,315. The interest yield on the life assurance funds, which on December 31, 1914, amounted to £4,048,244 (having been increased by £101,096), seems to have been about £3 15*s.* 8*d.* per cent., after deduction of income tax. This indicates a good profit from interest, as the rate assumed at the valuation was £2 15*s.* per cent. Quinquennial bonuses on participating life policies since the series was opened 40 years ago have been consistently at the rate of 35*s.* per cent. per annum, in reversionary form, which is a high proportionate standard. The Company might well look for a larger new life business, considering its attractions to the public and its low expense ratio.

The annuity fund at the close of 1914 amounted to £905,162, and the leasehold redemption fund to £4,184.

The balance sheet on December 31, 1914, shows total assets of £14,146,852. The directors certify that in their belief the assets as set forth therein were in the aggregate fully of the value stated, after deducting the amount set aside in the investment fluctuation fund.

MOVEMENTS IN METAL PRICES.

The last couple of months have seen a steady appreciation in the prices of the leading commercial metals, as shown in the table below, and compared with the figures ruling in 1914 the rise is in many cases enormous. Standard copper compared with the end of last year has risen £16, but the advance in refined copper is no less than £28. Tin is £12 up for cash and £16 for forward. Lead has risen £5, and spelter prices are about £40 up, while the gain in Cleveland pig iron amounts to about 13*s.* per ton. All the year there has been an uplifting of prices, and the only serious set-back has been in the case of spelter, which on July 30, 1915, stood at £100 a ton, compared with £27 15*s.* on December last, and at the end of October was quoted at £76.

	[illegible]	[illegible]	1914	1915	1915	1915	1915

There had been great hopes entertained that as matters settled down to war conditions more normal conditions would gradually be established; but there seems little hope of this, in fact, each week sees further difficulties placed in the way of the conduct of merchant business of this country. Not the least of those which are now having to be faced, and which is to no small extent responsible for the recent upward move in prices, lies in the extraordinary congestion of shipping facilities from America. It is hard enough as it is to gauge how things are going in America in respect of production, but when the mystery surrounding the output of copper, lead and spelter in North America is combined with the mystery regarding United States domestic consumption, and the impossibility of making shipments from there to Europe except under such conditions that there is no chance of knowing when the metal is likely to arrive here, the confusion becomes confounded, and this is just how the metal trade stands to-day. Even when it is a matter of shipping metal from this country to our sorely pressed Allies we find nothing but obstructions, owing partly to the difficulty in securing vessels to carry it to Russia, and, when this trouble is surmounted, owing to the erratic commandeering of boats in all directions by the authorities. This of itself entails enormous risks of losses upon all merchants handling business for Russia, as there is no knowing, even if the material is bought, whether shipping "permits" will be granted if these are obtained, whether tonnage can be obtained to carry it, and, if tonnage is obtained to carry it, whether the boats at the last moment will not be commandeered. This anomalous situation it seems may be avoided in part in the future by the Russian Government chartering vessels itself, which would at least ensure the prompt despatch to it of the war supplies of which it is urgently in need, and of which thousands of tons have on occasions been left lying in barges on the river owing to the difficulties placed in the way of the shippers. It is certain that Russia can no more wage war successfully if she is not allowed to obtain supplies of material, than we could if the United States Govern-

ment, by fits and starts and without notice, suddenly held up all shipping facilities between that country and the United Kingdom. In the meantime, it may be instructive to give a short table showing the highest and lowest prices of copper, tin and Scotch pig iron during the period covered by the last great European war:—

		1870 £ s. d.	1871 £ s. d.	1872 £ s. d.
Copper	Highest	68 15 0	85 0 0	108 0 0
	Lowest	60 10 0	64 0 0	77 0 0
Tin, Straits	Highest	134 10 0	155 0 0	190 0 0
	Lowest	104 10 0	121 0 0	130 0 0
Scotch pig iron	Highest	3 1 6	5 12 6	6 17 6
	Lowest	2 9 9	2 11 4	3 12 0

Records of other of the commercial metals are not available for the above period, but it may be interesting to follow out the fluctuations during the three years following 1872 in those metals for which there are returns:—

		1873 £ s. d.	1874 £ s. d.	1875 £ s. d.
Copper	Highest	92 0 0	89 0 0	84 0 0
	Lowest	79 0 0	75 0 0	78 15 0
Tin	Highest	113 0 0	124 10 0	96 10 0
	Lowest	104 10 0	87 0 0	76 0 0
Lead	Highest	24 0 0	25 10 0	25 0 0
	Lowest	21 15 0	19 10 0	20 5 0
Silver ...	Highest	59 1/16d.	59 1/2d.	57 1/2d.
	Lowest	57 5/8d.	57 1/4d.	55 1/2d.
Scotch pig iron	Highest	4 5 0	5 9 0	3 14 0
	Lowest	3 1 3	3 11 6	2 17 6

All calculations as to the probable course of movements in prices at the termination of the present War appear to be futile. That ordinary industry in all parts of Europe has been brought to a standstill, and that an enormous amount of leeway will have to be made up subsequently, to say nothing of repairing the devastation wrought by the Huns, goes without saying; but beyond this are financial considerations, and at the rate at which things are going now the wanton and reckless expenditure, waste, muddle, incompetence and extravagance in which this country at least is steeped must leave their mark for many years upon our financial resources. It is upon the financial position, therefore, that it would appear nearly everything depends, and meanwhile America is rapidly becoming financially bilious through the gorging of her system with the gold of the Allies.

SAVOY HOTEL SCHEME.

For years the Savoy Hotel, Limited, has been handicapped in its finances by the huge disproportion between a growing amount of mortgage, Debenture, &c., debt, and its share capital. The total trust and second-charge indebtedness in various forms aggregates nearly £2,100,000, while the Ordinary and Preference capital amounts to close upon £560,000.

In the matter of dividends upon its share capital the Company has acted conservatively, and has year by year set aside to various writings off and reserves. For the five years to 1913 inclusive the dividends upon the Ordinary capital were 5% each year, and the average yearly gross profit, before appropriations for debt charges, for the five years to 1914 inclusive was about £175,000. Fixed charges, interest, and sinking fund in respect of first-charge mortgages and second and other charges now absorb about £122,000 a year.

As a consequence of the War, receipts have fallen off immensely. About 50% of the receipts from lettings of rooms arises from "season" business (May to July) derived from American tourists, and a large proportion of foreign visitors, normally received, has this year been lost. The 1915 "season" is represented to have produced less receipts than the normal poor results for the first three months of any year.

In respect of profit results to December 31, 1914, no dividend was paid on either Ordinary or Preference share capital, and after meeting all fixed charges a balance of £41,475 was set aside to suspense.

The position since has become still more acute, and the directors, in consultation with the holders of securities representing first and second charges, ask consent to a scheme for deferring, until a year after the end of the War, the cash payment of interest on the second charges, calling for £61,100 in round figures for the twelve months. They anticipate a profit during the War period of only about £70,000 a year, as compared with the average of £175,000, and propose to continue meeting in cash only the interest and sinking-fund obligations on the First Charge Debentures, which call annually for about £61,080.

The respective amounts of debt and capital and the annual amount required to satisfy the first and second charges are set out below:—

	Amount £	Interest and Sinking Fund Charges £
First-charge mortgages	1,172,318	61,080
Second and other charges	909,900	61,100
	2,082,218	
Issued Share Capital –		
7% Preference shares	250,000	
Ordinary shares	307,800	

As to second charges it is proposed, in lieu of cash, to issue Deferred Interest Certificates, to carry interest at the rate of 6% per annum, payable, if the circumstances permit, yearly or half-yearly, and to be redeemed after the expiry of the suspension period as to any overdue interest and the face value of the certificates out of the certified annual profits of the Company shown to have been earned. Under the arrangements proposed no dividends on either the Ordinary or Preference shares are to be paid until the Deferred Interest Certificates have been paid in full and the sinking-fund payments, which also are suspended, have been made good. There is an amount of £125,000 5% Debentures, 1893, which are payable July 1, 1918, and it is proposed, and tentatively has been agreed to by the holders, that the date of redemption shall be postponed till July 1, 1921.

The following is a brief record of the amount of profit each year, the amount distributed in dividends on both Ordinary and Preference shares, what the dividend paid on Ordinary shares alone has been, and also the excess profit carried forward after allowance for reserves and writings off at the end of each year to 1913 inclusive. In respect of 1914 the excess profit after meeting all first and second charges was £41,475, which sum was set aside to strengthen the financial position:—

Year	Year's Profit £	Ord. Div. %	Total Dividends £	£	
1914	171,318	Nil	Nil	41,475	All set aside
1913	182,890	5	32,890	9,349	Carried forward
1912	178,287	5	32,890	8,830	,,
1911	177,970	5	32,890	8,910	,,
1910	166,548	5	32,890	8,064	,,
1909	163,475	5	32,890	7,864	,,

TEBRAU RUBBER ESTATES.

We have in two of our recent issues pointed out four rubber plantation companies the shares of which, by reason of the very low market capitalisations per planted area, and their dividend prospects on account of rapid and substantial increase of output, appear exceptionally cheap. These concerns are all more or less in the early stages of production. A company which is a good step nearer maturity than the four referred to is the Tebrau Rubber Estates. Its capital is £125,000 in £1 shares, it has a planted area in Johore, Malaya, of 3,917 acres, and, the market price of the shares being £2, the market capitalisation per planted acre works out at £64—a low figure when the nearness of a high dividend-paying stage, the big increase of output already witnessed, and the soundness of the Company's financial position are considered. For the financial year ended June 30, 1915, the annual report in regard to which will be issued shortly, the rubber output amounted to 646,410 lb. from about half the acreage planted, which compares with a production of 334,440 lb. in the previous twelve months. The ages of the various plantings indicate that there will be a further heavy annual

increase in the output during the next two or three years:—

Acreage Statement.

	Acres
Planted prior to and including 1907	825
1908	737
1909	1,124
1910	1,173
1911	60
	3,917

It will be seen that there is a large area of 1,173 acres planted in 1910 which should have about reached the tapping stage. The effect of this is already reflected in the quantity of rubber produced, for in the first four months of the current financial year the output has been as much as 285,949 lb., in comparison with 165,045 lb. in the corresponding period of last year, an increase in production of very nearly 75% on top of a 90% increase in the past financial year.

As to dividend prospects, the net profit for the financial year to June 30, 1915, at an estimate of 1*s.* per lb., should amount to about £32,000, a sum which would be equal to 25% on the issued capital. However, inasmuch as capital expenditure on estate upkeep for the year was estimated to be £11,279, the actual dividend distribution may be curtailed to 15%, leaving a balance profit of, say, £13,500 undistributed. Seeing that the surplus liquid assets at June 30, 1914, amounted to £15,000, a more liberal dividend distribution than we have allowed for would be justified However, in the past the directors have adopted a very cautious policy. As the estate reaches full maturity capital expenditure should diminish, and a much larger proportion of the profit should consequently be available for dividends. For the current financial year, having regard to the great increase in the rubber production above referred to, we should think the dividend will be nearer 30% than the 15% we have estimated on account of the past financial year, and, subsequently, provided the price of the commodity is maintained in the region of 2*s.* per lb., or about 6*d.* per lb. lower than the present quotation, shareholders could rely upon yearly increases of dividend until, in, say, three or four years' time, the estate is in full bearing, when, reckoning on an output of only 350 lb. per acre—a none too liberal allowance for a very well-kept estate—the production per annum should be 1,370,000 lb., which would yield an annual profit, reckoned at 1*s.* per lb. (price of rubber 2*s.* and "all in" costs 1*s.*), of £68,000, or more than 50% on the issued capital. Consequently the £1 shares at £2 appear distinctly cheap, a view that will be strengthened by a glance at the following information in regard to production, costs, profits, &c.:—

Tebrau Rubber Estates.

Year ends June 30.

"Oil Seeds and Feeding Cakes." With preface by W. R. Dunstan, C.M.G., LL.D., &c. Price 2*s.* 6*d.* This book, published by Messrs. John Murray, is one of a series of Imperial Institute monographs, and reveals how Germany secured a virtual monopoly of some of the most valuable produce of the tropical possessions of Great Britain.

Correspondence.

TAXING CAPITAL.

To the Editor of THE STATIST.

SIR,—I guarded myself, as I thought, last week against your misconception by stating explicitly that in the term "bankers" I included everyone, from the Government down to the smallest loan office, who does any kind of banking business. However, I seem to have failed. I ask you, therefore, to permit me to prove my case by dealing this week with bills of exchange, which play so great a part in the foreign trade of every country—which, indeed, seemed so important to the late Chancellor of the Exchequer that he rushed in haste to protect the bill acceptors at the expense of the whole of the taxpayers of the United Kingdom. Let us suppose, then, that the Messrs. Rothschild authorise a merchant in Brazil to draw upon them to the extent of £20,000, and that the Brazilian merchant draws accordingly, buying produce of any kind you please. In due course the bill is presented and accepted. The produce is sold, and when it falls due the bill is taken up. Now I have chosen the Messrs. Rothschild because of the commanding position they hold in the world's trade. £20,000 to them would be a very small sum, considering the magnitude of their capital. But the Messrs. Rothschild carry on a business of immense extent and most varied character. Amongst other things, they are the financial agents of great Governments, and they hold at times very considerable sums belonging to those Governments. Moreover, they receive deposits from their customers, especially their foreign customers. Therefore the Messrs. Rothschild, in addition to their own capital, have at their disposal from time to time very large sums belonging to Governmental and other customers. The particular £20,000 drawn by the Brazilian merchant may not have affected any of the moneys held on account of others by the Messrs. Rothschild. But equally probable it is that it may have done. To the extent that the Messrs. Rothschild employ moneys held by them on account of others in either accepting bills or doing any other kind of commercial business they are clearly acting just as the bankers are—upon borrowed money. The real truth is that the whole bill of exchange business is based upon credit and nothing else. In the ultimate resort, its security depends upon the willingness of the consuming public to buy and consume the commodities dealt in. Everybody knows how the price of coffee varies in Brazil; how sometimes Brazil does a roaring trade because coffee is dear; and how at other times either the Federal Government or one of the State Governments has to come to the assistance of the coffee growers because of the low prices. It is, then, upon credit, and credit alone, that the whole bill-accepting business is conducted. And its success depends upon the willingness of consumers to go on buying at remunerative prices. That was proved decisively when the War broke out, and when, therefore, the Chancellor of the Exchequer pledged the credit of the United Kingdom to help the bill-acceptors out of their difficulties.

AN ECONOMIST OF THE NEW SCHOOL.

[We now appreciate our correspondent's point. It is not capital he wishes to tax at all, so that we [illegible] bankers in employing a part of the country's floating [illegible]

BANK OF NEW ZEALAND.—Interim dividend [illegible] at rate of 10 [illegible] and profit and loss [illegible] of 5 [illegible] capital [illegible] July 1, 1915.

LANADRON RUBBER ESTATES.—Interim dividend [illegible] 7½ [illegible] less tax.

BARRY GRAVING DOCK AND ENGINEERING CO.—Dividend [illegible] at rate of 10 [illegible] less tax, on Ordinary shares [illegible] of 2s. per share [illegible] for year.

Scottish Provident Institution.

(ESTABLISHED 1837.)

Funds amount to £16,000,000.

LANCASHIRE COTTON INDUSTRY.

SINCE a fortnight ago rather "bearish" influences have been at work in raw-cotton circles. More favourable news has been received with regard to the American crop, and at the same time there has been a disposition to reduce estimates of consumption. Prices in yarn and cloth, however, in the Manchester market have not shown much change. The outstanding feature of interest at the moment is the question of the supply of labour. The boom in recruiting for the Army is having a marked effect upon this problem. The consequences are being more seriously felt in the spinning districts than in the weaving department. The Master Spinners' Federation has discussed the situation at recent meetings, and a deputation from that body has had an interview with Lord Derby. Although nothing has been made known as to what took place there is not much hope of men being specially released for employment in cotton mills. There is every probability, therefore, of much lessened production in yarn, with a possible scarcity of supplies.

Trade in piece-goods is being greatly hampered by the difficulty of obtaining colours for finishing and dyeing cloths. Many firms are conserving their available supplies of dyes and are refusing to quote for certain descriptions. The range of shades is becoming very limited. Owing to various high charges goods cannot be put down in our outlets abroad except at prices which look very dear in relation to the values ruling in the raw material, and it is quite evident our customers throughout the world are hesitating to replenish stocks at the present time. The larger inquiry for India has continued and further buying has occurred in miscellaneous cloths, chiefly of a light description, and some manufacturers have obtained a little relief. Practicable demand in shirtings, however, continues very disappointing, and although in some cases buyers and sellers are not very far apart, it is extremely difficult to bridge small differences in price. Some Manchester merchants have rather heavy stocks, which they are prepared to sell at a little below market quotations. No development in the demand for China can be recorded, and grey staples are decidedly flat. For Singapore and Java a fair sorting-up trade continues to be done. Rather more activity is reported for Egypt. Several Near Eastern outlets are entirely cut off from a trade point of view. Some producers of heavy goods are not quite so deeply engaged on Government contracts as a few months ago. The home trade continues generally healthy.

A stronger feeling is prevailing in yarn circles. In both American and Egyptian qualities producers are presenting a stiffer front to buyers than for some time back. This attitude is due to the probable lessened output during the next few months as a result of the shortage of operatives. A rather increasing business has recently been done, especially in medium American numbers, and spinners have somewhat strengthened their position. It should be pointed out, however, that when a mill is only partially running the standing charges are the same as when production is at full stretch, and it is necessary for producers to obtain higher prices for yarn if losses are not to be entailed. The export demand keeps up well. Yarns suitable for dyeing for India are being sold fairly freely. A healthy business also continues to come round for Holland and France.

At a joint conference held on Wednesday last in Manchester, between the trade union officials and representatives of the Cotton Manufacturers' Association, it was decided to grant a War bonus of 5% to all operatives engaged in the weaving branch of the industry. The bonus will be paid from the beginning of January next, and will go on for three months after the end of the War. From that time it will not be possible for either side to apply for an advance or a reduction in wages for six months. About 200,000 operatives are affected by this decision, and it is estimated that the additional cost on the trade will amount to about £12,000 per week. In view of the wretched condition of the industry since the beginning of the War, this is a serious extra charge for employers, and it is evident the advance has been given owing to the much increased cost of living.

BANKERS' INVESTMENT TRUST.—Interim dividend at the rate of 4½% per annum on the Preferred stock and 4% per annum on the Deferred stock for half-year.

BRUNNER MOND & Co.—Interim dividend on Ordinary at rate of 22½% per annum, less tax.

FINE ART AND GENERAL INSURANCE Co.—Interim dividend of 1*s.* 6*d.* per share, less tax.

GARTSIDES (BROOKSIDE BREWERY).—Interim dividend of 3% on Ordinary.

ROYAL INSURANCE Co.—Interim dividend of 14*s.* per share, subject to tax.

RUDGE WHITWORTH.—Dividend of 10 on Ordinary, tax free.

UNITED INSURANCE Co.—Dividend of 10% per annum.

LOUISVILLE AND NASHVILLE RAILROAD.

SIXTY-FOURTH ANNUAL REPORT—FOR THE FISCAL YEAR ENDED JUNE 30, 1915.

To the Stockholders of the Louisville & Nashville Railroad Company: Louisville, Ky.: October 6, 1915.

The Board of Directors of your Company respectfully submits the following Report for the fiscal year ended June 30, 1915:—

MILEAGE.

	Miles.	Miles.	Miles.
I.—Lines Owned and Operated.			
(1) Owned—Fee or Leasehold		3,806·32	
(2) Operated but not Owned—			
(a) Operated as owner of entire Capital Stock	830·49		
(b) Operated under lease	18·46		
(c) Operated under contract	3·92		
(d) Operated under trackage arrangements	216·01		
		1,218·88	
(3) Owned, leased to N. C. and St. L. Ry., operated under trackage arrangements		5·46	
(4) Owner of entire Capital Stock, property operated separately—operated by this Co. under trackage arrangements		6·46	
Total operated			5,037·12
Average mileage operated during the year, 5,038·92.			
II.—Lines Operated under their Separate Organisations in which this Company Owns a Majority of the Capital Stock or is Interested as Joint Owner or Lessee.			
Nashville, Chattanooga & St. Louis Railway (a majority of the Capital Stock owned)		976·32	
Central Transfer Railway & Storage Co., Louisville (one half of the Capital Stock owned)		0·67	
Georgia Railroad and Depot Co., operated as joint lessee		571·00	
Chicago, Indianapolis & Louisville Railway (a majority of the Capital Stock owned jointly with the Southern Railway Co.)		682·41	
Louisville, Henderson & St. Louis Railway less mileage of Louisville & Nashville Railroad operated under trackage arrangements (a majority of the Capital Stock owned)		181·70	
Woodstock & Blocton Railway (one-half of the Capital Stock owned)		7·73	
		2,360·07	
Less—Mileage used by this Company under trackage arrangements—			
Woodstock & Blocton Railway	7·73		
Nashville, Chattanooga & St. Louis Railway	51·35		
Louisville, Henderson & St. Louis Railway	·26	59·32	2,300·75
III.—Lines Owned by this Company but Operated by other Companies.			
Paducah & Memphis Division leased to Nash., Chatt. & St. L. Ry. at 5 per cent. on cost of road	254·20		
Less—Mileage operated by this Company under trackage arrangements	5·46		
		248·74	
Clarksville & Princeton Branch—Gracey, Ky., to Princeton, Ky. (leased to Ohio Valley Rail. Co. at $12,039.70 per ann.)		20·71	269·45
Total mileage			7,607·32
Total mileage June 30, 1914			7,506·66
Increase			100·66
Accounted for as follows—Additions—Louisville & Nashville Railroad		79·17	
Nashville, Chattanooga & St. Louis Railway		14·41	
Sundry net additions		7·08	
			100·66

BONDED DEBT.

Bonded Debt June 30, 1914, total issue			$184,441,339 94
Bonds Issued—Unified Fifty year 4 per Cent. Gold	$1,196,000 00		
Louisville & Nashville Railroad Co., First Mortgage Fifty year 5 per Cent. Gold	9,823,000 00		
	11,019,000 00		
Bonds Drawn for Sinking Funds—Redeemed—Evansville, Henderson & Nashville Division Gold	$105,000		
General Mortgage Gold	560,000		
Pensacola and Atlantic RR. First Mortgage Gold	101,000		
Pensacola Division First Mortgage Gold	25,000		
Newport & Cincinnati Bridge Co. General Mortgage	13,000		
	804,000	789,000 00	
Unredeemed (not Presented for Payment)—Evansville, Henderson & Nash. Div. Gold	5,000		
General Mortgage Gold	73,000		
Henderson Bridge Company First Mortgage Gold	1,000		
	79,000	79,000 00	
		868,000 00	
Bonds Redeemed and Cancelled—Lexington & Eastern Railway Co. General Mortgage	22,000		
Yellow River Railroad First Mortgage	140,000		
	162,000	162,000 00	
Bonds Matured—Redeemed—Equipment, Series "A" 5 per cent. Gold	650,000		
Cash Deposited with Trustee to Retire Bonds—Lexington & Eastern Railway General Mortgage	10,000		
	660,000	660,000 00	
		1,690,000 00	
Net increase over last year			9,329,000 00
Bonded Debt June 30, 1915, total issue. (See Balance Sheet, Table III.)			$193,770,339 94
Less—Bonds Owned by Company		$14,018,339 94	
Deposited in Trust as Collateral		3,500,000 00	
Deposited Account of Georgia Railroad Lease		500,000 00	
Held in Sinking Funds		1,092,000 00	
			19,539,339 94
Total Outstanding Bonded Debt in hands of public June 30, 1915			$174,231,000 00
Total Outstanding Bonded Debt in hands of public June 30, 1914			166,341,000 00
Increase in Bonds outstanding in hands of public			$5,890,000 00
Accounted for as follows—Issue—Lexington & Eastern Railway Co. First Mortgage Fifty-year 5 per cent. Gold		$7,500,000 00	
Deduct—Bonds matured	$650,000 00		
Cash Deposited with Trustee	10,000 00		
Bonds drawn for Sinking Funds, including Redeemed and Unredeemed Bonds	804,000 00		
Bonds Purchased for Sinking Funds	146,000 00		
	1,615,000 00		
Less—Bonds withdrawn from Treasury and cancelled for Sinking Funds	5,000 00		
		1,610,000 00	
Increase as shown above			$5,890,000 00

GENERAL RESULTS.

The General Results, as given in detail in Table No. I., are here summarised:—

Operating Revenues		$51,605,015 39	
Less—Operating Expenses, 76·41 per cent.		39,431,789 01	
Net Operating Revenues, 23·59 per cent.			$12,174,226 38
Taxes		2,133,712 78	
Uncollectible Railway Revenues		6,065 19	
			2,142,777 97
			$10,031,448 41
Other Income: From Rents		$2,507,501 35	
From Separately Operated Properties		129,903 16	
From Investments		2,883,296 37	
From Interest		6,829 79	
From Securities held under Georgia Railroad Lease		73,705 00	3,429,595 65
Total Income			$13,461,044 06
Deductions from Income: Interest on Bonded Debt		$7,475,563 39	
Other Interest		42,436 24	
Rents		879,262 86	
Sinking Funds		146,484 31	
Reserve for Doubtful Accounts		22,057 32	
Taxes on Miscellaneous Personal Property, &c.		36,120 71	8,600,901 83
Net Income carried to Profit and Loss Account			$4,860,142 23

The balance to credit of Profit and Loss Account amounts to $40,998,116·89.

GROWTH OF TRAFFIC.

The growth of traffic for the past 10 years is shown by the following table:—

Years.	Average Miles Operated.	Operating Revenues.	Operating Expenses.	Net Operating Revenues.	Operating Revenues per Mile.	Operating Expenses per Mile.	Net Operating Revenues per Mile.	Percentage of Expenses to Operating Revenues.
1905-1906 ...	4,130·91	$43,008,996 23	$30,933,463 71	$12,075,532 52	$10,411 50	$ 7,488 29	$2,923 21	71·92
1906-1907 ...	4,306·33	48,263,945 20	35,781,302 54	12,482,642 66	11,207 67	8,309 00	2,898 67	74·14
1907-1908 ...	4,347·80	44,620,281 16	*33,594,291 05	11,025,990 11	10,262 72	7,726 73	2,535 99	75·29
1908-1909 ...	4,393·11	45,425,891 45	*29,627,499 48	15,798,391 97	10,340 26	6,744 08	3,596 18	65·22

* Does not include Additions and Betterments heretofore included in Operating Expenses.

RAILS.

The rails in main track operated, except trackage rights, are shown below:—

Steel Rails—Under 58½ pounds per yard	76·14 miles	
58½ pounds per yard	319·80 miles	
60 to 65 pounds per yard	276·74 miles	
68 pounds per yard	56·21 miles	
70 pounds per yard	1,238·62 miles	
80 pounds per yard	1,764·08 miles	
85 pounds per yard	24·87 miles	
90 pounds per yard	1,050·80 miles	
141 pounds per yard	1·32 miles	
		4,808·58 miles
Iron Rails		·61 miles
Total		4,809·19 miles
To which add—Operated under trackage arrangements		227·93 miles
Total mileage owned and operated		5,037·12 miles

The rails in main track owned, operated by other companies, are shown below:—

Steel Rails—56 pounds per yard	1·40 miles	
58 pounds per yard	22·35 miles	
60 pounds per yard	54·04 miles	
68 pounds per yard	·71 miles	
75 pounds per yard	·04 miles	
80 pounds per yard	172·96 miles	
85 pounds per yard	23·21 miles	
90 pounds per yard	·20 miles	
		274·91 miles
Less—Portion of Paducah & Memphis Division used by L. & N. Railroad under trackage arrangements		5·46 miles
Total mileage operated by other companies		269·45 miles

ADDITIONS AND BETTERMENTS—ROAD.

During the year there were charged to Investment, Road, Expenditures for Additions and Betterments as follows:—

Engineering	$33,599 86	Telegraph and telephone lines	$105,592 16
Land for transportation purposes	225,604 46	Signals and interlockers	331,176 03
Grading	94,193 61	Power-distribution systems	951 99
Tunnels and subways	49,541 52	Miscellaneous structures	2,968 48
Bridges, trestles, and culverts	Cr.26,075 91	Paving	Cr.10,124 74
Ties	37,782 90	Roadway machines	45,333 88
Rails	330,196 12	Roadway small tools	525 68
Other track material	390,436 51	Assessments for public improvements	Cr.15,718 18
Ballast	99,889 01	Revenues and operating expenses during construction	Cr.6,878 32
Track laying and surfacing	109,070 58	Other expenditures—Road	562 35
Right-of-way fences	7,369 21	Shop machinery	102,087 51
Crossings and signs	145,698 91	Taxes	2,664 08
Station and office buildings	391,645 05		
Roadway buildings	32,087 96	Total for the year ended June 30, 1915	$ 2,705,820 51
Water stations	34,058 63	Total for the year ended June 30, 1914	7,098,190 01
Fuel stations	22,058 36		
Shops and engine houses	132,103 23		
Wharves and docks	37,439 58	Decrease	$4,392,369 50

ADDITIONS AND BETTERMENTS—EQUIPMENT.

The following expenditures for Additions and Betterments, Equipment, were charged to Investment, Equipment, during the year:—

CHARGES: Locomotives—Thirty-five (35) bought or built	$609,683 36		
Equipping twenty-one (21) with smoke-abatement devices (Nashville Terminals)	824 44		
Equipping with glass water-gauges, Chicago flange oilers, automatic fire-box doors, superheaters, electric headlights, steam heating apparatus, and changing safety appliances	38,982 61		
		$649,490 41	
Passenger Train Cars—Forty-five (45) bought or built	614,112 62		
Expenditures on new cars not completed	17,312 84		
Equipping with steam heat and changing safety appliances	1,434 01		
		632,859 47	
Freight Train Cars—Two thousand one hundred and seventy-five (2,175) bought or built	1,819,493 49		
Seven (7) rebuilt	5,611 38		
Applying Farlow draft gears and changing safety appliances	84 374 12		
		1,909,478 99	
Work Equipment—One (1) standard spreader car bought	1,000 00		
Eighty-six (86) released from construction work	106.524 32		
Improvements on derrick car No. 41220	1,006 81		
Applying Farlow draft gears and changing safety appliances	806 36		
Twenty-three (23) freight train cars changed to work equipment	5,199 45		
Thirty (30) passenger train cars changed to work equipment	14,020 22		
		128,557 16	
			$3,320,386 03
CREDITS: Locomotives—Thirteen (13) destroyed or sold		118,895 82	
Passenger Train Cars—Ten (10) destroyed or sold	34,766 25

			$18,684,320 22

The above balance, $18,684,320. 22, includes depreciation on equipment of the Lexington & Eastern Railway Company since December 31, 1912.

PAYMENTS TO BE MADE ON ACCOUNT OF SINKING FUNDS, 1915-1916.

Henderson Bridge Co.	August 1, 1915	$8,400
Pensacola Division	September 1, 1915	26,250
Evansville, Henderson & Nashville Division	December 1, 1915	165,000
Pensacola & Atlantic Railroad	February 1, 1916	118,800
General Mortgage	June 1, 1916	718,300
Newport & Cincinnati Bridge Co.	July 1, 1916	13,740
Total		$1,050,490

• The difference between these credits and the charges to Operating Expenses for depreciation shown in Table No. IX. is caused by charges to Investment in Road accounts for equipment used in construction and addition and betterment work and to lessees of equipment of this Company.

GUARANTEES.

The Company has guaranteed, by endorsement or by agreement, the following obligations:—

	Issued.	Annual Charge
Louisville & Nashville Terminal Company First Mortgage Four per Cent. Gold Bonds—		
Endorsement, made jointly and severally with Nashville, Chattanooga & St. Louis Railway, covers principal and interest of bonds issued	$2,535,000	$101,400 00
Louisville & Nashville - Southern, Monon Collateral, Joint Four per Cent. Gold Bonds—		
This Company and the Southern Railway Company are each liable for one half of the principal and interest of bonds issued, $11,827,000. One year's interest, $473,080; this Company's liability one-half. Should either Company default in its obligations to the other in respect of the bonds of this issue, the pledged shares of stock belonging to such Company so in default shall become and be the property of the Company not in default, which thenceforth shall be liable in severalty upon all covenants contained in the bonds	5,913,500	236,540 00
Nashville & Decatur Railroad, Rent Dividend—		
Under lease of this property the payment of 7½ per cent. annual dividend to stockholders is guaranteed as rent. Amount of Capital Stock, $3,553,750		266,531 25
Terminal Railroad Association of St. Louis—		
One-fifteenth of interest on $23,212,000 General Mortgage Four per Cent. Gold Bonds now outstanding—one year's interest, $928,480; L. & N. RR. Co.'s proportion, one-fifteenth		61,898 67
Georgia Railroad Lease—		
This Company is liable jointly with the Atlantic Coast Line Railroad Company for the yearly rent, under the lease of the Georgia Railroad, amounting to $600,000. This Company's liability, per annum		300,000 00
Memphis Union Station Company First Mortgage Five per Cent. Gold Bonds—		
Endorsement, made jointly and severally with Nashville, Chattanooga & St. Louis Railway, Southern Railway Company, St. Louis, Iron Mountain & Southern Railway Company, and St. Louis South-Western Railway Company, covers principal and interest of the bonds issued	2,500,000	125,000 00

MAINTENANCE OF EQUIPMENT.

The average cost per mile for repairs to equipment for the past 10 years has been as follows:—

	1905-06. Cents.	1906-07. Cents.	1907-08. Cents.	1908-09. Cents.	1909-10. Cents.	1910-11. Cents.	1911-12. Cents.	1912-13. Cents.	1913-14. Cents.	1914-15. Cents.
Locomotive repairs, per mile	9·102	7·771	9·090	8·092	7·884	8·482	8·770	8·862	8·957	8·812
Passenger car repairs, per mile	1·646	1·546	1·542	1·190	1·292	1·591	1·531	1·401	1·413	1·165
Freight car repairs, per mile	0·865	1·049	0·918	0·745	0·739	0·835	0·914	1·113	1·154	1·070

All equipment of the System in revenue service is provided with both air brakes and automatic couplers.

The following table shows the equipment on hand at the close of each of the past 10 fiscal years:—

Louisville and Nashville Railroad and Operated Lines.

	1905-06.	1906-07.	1907-08.	1908-09.	1909-10.	1910-11.	1911-12.	1912-13.	1913-14.	1914-15.
Locomotives	745	865	896	899	928	971	998	1,035	1,069	1,090
Passenger Cars	535	559	572	573	590	611	620	655	667	659
Freight Cars	36,633	39,528	40,589	41,720	43,019	44,564	44,727	45,289	46,480	46,710
Work Equipment	1,289	1,452	1,503	1,421	1,429	1,648	1,884	2,495	2,534	2,534

FINANCIAL SITUATION.

The Decrease in Operating Revenues, compared with previous year, was $8,300,451 48, equal to 13.85 per cent.

This great shrinkage was due largely to the effect produced by the war in Europe upon the price and consumption of the products and manufactures of the territory served by the Louisville and Nashville Railroad Company and to the consequent decrease in passenger travel.

An analysis of the tons moved in the two years shows decreases as follows :—

In Products of Agriculture	6.57 per cent.
Animals	13.94 ,,
Mines	12.56 ,,
Forests	20.25 ,,
In Manufactures	15.99 ,,
In General Merchandise	20.54 ,,
In Miscellaneous Freight	41.78 ,,
Average	13.92 per cent.

As a further illustration of the great shrinkage in business throughout the whole territory served by the Louisville and Nashville Railroad Company, freight "forwarded" revenue from principal stations shows by comparison with the previous year the following decreases in per cent :—

Cincinnati	23.93 per cent.
Louisville	23.98 ,,
Owensboro	16.86 ,,
Evansville	25.00 ,,
Henderson	19.32 ,,
St. Louis and East St. Louis	3.35 ,,
New Orleans	6.01 ,,
Mobile	21.04 ,,
Pensacola	16.34 ,,
Selma	25.00 ,,
Montgomery	21.71 ,,
Birmingham	24.86 ,,
Nashville	10.56 ,,
Knoxville	17.55 ,,

Birmingham is now showing some revival, largely due to orders for Europe.

NEW LINE, WINCHESTER TO IRVINE.

Owing to conditions upon this line the construction work has been very badly delayed. While the line has been practically completed, it is not expected that it will be in shape to turn over to the Operating Department until about the middle of September 1915.

For the purpose of handling the coal traffic from Eastern Kentucky for Cincinnati and Louisville through Irvine and Winchester, now moving via Beattyville Junction and the old line of the Lexington and Eastern Railway, it was necessary to construct yard facilities at Irvine. With the exception of the depot buildings, the work is practically completed. It is expected that all of the facilities will be finished and ready for operation by the middle of September 1915.

INCREASED TERMINAL FACILITIES AT LEXINGTON, KY.

Since the operations of the Lexington and Eastern Railway were merged with those of the Louisville and Nashville Railroad, it has become necessary to provide more adequate terminal facilities at Lexington. This work was commenced in the spring of 1914 and is now nearing completion.

AUTOMATIC BLOCK SIGNALS.

The installation of automatic block signals, commenced in the summer of 1912, is well under way. This work on the Cincinnati Division, Lagrange to the north end of the Newport and Cincinnati Bridge, 83 miles, and on the Knoxville Division between La Follette and Corbin, 53.2 miles, has been completed and is in operation. This work on the Kentucky Division, undertaken between Covington and Corbin, has been completed between Corbin and Cynthiana, 120.7 miles, and is in operation. It is expected that the remainder will be completed and placed in operation by November 1, 1915.

When the installation authorised at the writing of this report has been completed, there will be in operation on the system automatic electric block signals protecting 336.9 miles of single track and 164.7 miles of double track, making a total of 551.6 miles.

LEWISBURG AND NORTHERN RAILROAD.

This line between Brentwood, Tenn., and the Alabama State Line, 79.17 miles, was placed in operation on July 15, 1914, although the work of placing concrete lining in the double track tunnel at Diana is still in progress. The main tracks on the line between Maplewood and Mayton, Tenn., on which the yard at Radnor is located, were completed in the fall of 1914.

NASHVILLE AND DECATUR DIVISION.

The new line, Athens, Ala., to the Tennessee State Line, mentioned in last year's report, was placed in operation on July 15 1914. During the year a second track was constructed on this division between Vine Hill and Mayton, and the new second track between Mayton and Brentwood was completed, and the whole put in operation during the spring of this year.

SOUTH AND NORTH ALABAMA RAILROAD.

The new double track line on revised location between Bangor and New Castle, Ala., including the Haydon Mountain Tunnel, was completed and put in operation during November 1914.

SALE OF SECURITIES.

The following securities have been sold during this fiscal year :

$7,500,000 00 Lexington and Eastern Railway First Mortgage Fifty-year 5 per cent. Gold Bonds, called for	$7,125,000 00

ADDITIONS AND BETTERMENTS.

Cash expenditures during the year for additions and betterments, new construction, additional equipment, and advances to subsidiary companies for similar purposes, including $1.557,071.35 expended in connection therewith and charged to Operating Expenses, amounted to $9,731,803.20.

Attention is called to the report of the Comptroller for the results of the year's business.

The Board acknowledges the fidelity and efficiency with which the officers and employees of the Company have served its interests.

For the Board of Directors,
H. WALTERS, *Chairman.*
M. H. SMITH, *President.*

HASKINS & SELLS, *Certified Public Accountants*, 30 Broad Street, New York.

New York, September 28, 1915.

Henry Walters, Esq., Chairman of the Board, Louisville & Nashville Railroad Company, 71 Broadway, New York.

We have examined the books and accounts of the Louisville and Nashville Railway Company for the fiscal year ended June 30, 1915, have verified all cash and security balances by count or by comparison with receipts and certificates of deposit, and have examined carefully all details of revenues and expenses and all charges to capital accounts and

We hereby certify that the accompanying General Balance Sheet and statements of Income and Profit and Loss are correct, and truthfully set forth, respectively, the financial condition June 30, 1915, and the results from the operation for the period shown.

HASKINS & SELLS, *Certified Public Accountants.*

REPORT OF THE COMPTROLLER.

Accounting Department, Louisville and Nashville Railroad Company, Louisville, Ky., September 28, 1915.

Mr. M. H. Smith, President.

Dear Sir,—I submit herewith statements showing the financial condition of the Company, and the results from operation for the year ended June 30, 1915, as set forth in the following tables:—

No. I.—Income Account.
No. II.—Profit and Loss Account.
No. III.—General Balance Sheet.
No. IV.*—Bonded Debt and Estimated Interest Charges for 1915-16
No. V.*—Securities Owned.
No. VI.*—Investment in Road and Equipment.
No. VII.*—Operating Revenues, Operating Expenses, and Net, by Months.
No. VIII.*—Total Operating Revs., Operating Expenses, and Net.
No. IX.*—Operating Expenses, in Detail.
No. X.*—Passenger and Freight Statistics.

Very respectfully, CHARLES HAYDON, *Comptroller.*

Note.—General Balance Sheet Accounts for previous fiscal year, for comparative purposes, have been revised in conformity with the Classification prescribed by the Inter-State Commerce Commission, effective July 1, 1914. In making this revision the Southern Railway Company's proportion of bonds issued jointly with this Company, amounting to $5,913,500, has been included. All other changes in the accounts and total are occasioned by reclassification.

MEETINGS
OF PUBLIC COMPANIES.

BARCLAY AND COMPANY, LIMITED.

AN extraordinary general meeting of this Company was held on November 5 at the head office, 54 Lombard Street, E.C., for the purpose of submitting resolutions approving a joint working agreement with the United Counties Bank, Limited. Mr. J. Herbert Tritton presided.

In the absence of the Secretary (Mr. Edwin Fisher) on active service, the notice convening the meeting was read by Mr. W. N. Seeley, one of the assistant secretaries.

The Chairman: Gentlemen, I have to ask you whether you will take the agreements which are referred to in the notice as read. (Agreed.) A telegram from Birmingham has just been placed in my hands announcing "Resolutions passed unanimously, Roper [illegible] at the extraordinary general meeting of the United Counties Bank this morning. (Applause.) I regret to have to explain to the shareholders that my presence in the chair at this meeting is due to the sudden and, let us hope, quite temporary indisposition of our Chairman, Mr. F. A. Bevan, and to the absence on military duties of our Vice-Chairman, Colonel H. G. Barclay. I may mention that four of our directors are absent serving with the Colours. You have been asked to come here to-day that you may approve of the working agreement between Barclay and Company, Limited, and the United Counties Bank, Limited, the particulars of which are very fully set forth in the letter inviting you to attend this meeting, but which you have taken as read.

Reasons for Amalgamation.

I will now call your attention to the circumstances which have brought it about. As stated in the letter of the 27th ultimo, your directors arranged provisional terms for amalgamation with the United Counties Bank, Limited, several months ago. This Bank was an old client of ours, and it was, therefore, natural that negotiations should be entered into between it and ourselves, and the terms set forth in the letter of 27th ultimo were agreed upon. Great pressure is being put on manufacturers of munitions to turn out work as fast as possible; large contracts are being entered into by the Government for the building of huts and purchase of foodstuffs, and the banks are being called upon by these manufacturers and contractors to finance them pending the period of repayment. I may say that during the War we have endeavoured to give all reasonable assistance to such customers. Looking at the present position of affairs, would it not appear self-evident that our proposals should be welcomed by the Government as adding to our mutual strength and therefore helping the financing of the requirements of the War? Then, looking to the future (to the longed-for day when peace—on terms satisfactory to the Allies—shall be made), it is quite clear that Germany must and will make greater efforts than ever to secure as much of the trade of the world as possible, and that our manufacturers and traders will have to do their very utmost to compete with them successfully. Therefore I say, whether looking to the present or the future, it is of the greatest importance that the banks in this country should be as strong as possible. And, may I not add, are not the Government greatly indebted to the banks for having come forward so splendidly with their very large subscriptions to the War Loan?

The Treasury Committee's Sanction Withheld.

Taking these matters into consideration, would you not have thought that when the Treasury Committee (whose sanction was necessary in order that the shares to be allotted to the United Counties Bank, Limited, should be marketable) was approached they would at once have signified their approval of the scheme? When first we asked their permission to amalgamate, one of the proposed conditions was an increase of capital, but, on being informed that they could not sanction any increase of capital during the War, we waived this part of the scheme and only asked for an exchange of shares, no application being made to the public and no prospectus issued, but we were again met with an absolute refusal. We then offered to go and explain our position to the Committee, but they refused to see us, giving no reason at all for their action. Now, I may inform you, gentlemen, that the highest financial authorities, and also some of the most eminent legal opinions, not only approved of our scheme, but expressed great surprise at the action of the Treasury Committee, and you have doubtless read the comments of the Press, which, I believe, without exception condemned the action of the Committee. What the reason is for their refusal remains a mystery. They have sanctioned many applications for issues of fresh capital in the case of companies and Colonial Governments, and I think the shareholders of the two banks may therefore justly complain that they have been very hardly treated by this Committee, which surely was never created to hinder such a sound business arrangement as this amalgamation. It has been generally understood that the functions of this Committee are purely for the prevention of export of capital from this country for foreign exploitations or for the financing of imports, and that they have no such duty of prohibiting business of a character which is calculated to promote and develop the manufacturing and export trades of this country.

Working Agreement Adopted [illegible].

It may be asked why, instead of waiting until the Committee give their sanction, or the War comes to an end, the Banks have not deferred action, and to this I reply that, having in prospect what both Banks believe to be a good thing, it is thought well to ensure, as far as can be done, the certainty of the scheme being carried out, and this we believe has been done by this working agreement, whereby neither Bank can for a very long period enter into negotiations with any other bank, and whereby each Bank will have some control in the management of the other. There is no amalgamation of capital, but there is a sharing of profits, any surplus of which, after paying the agreed dividends on the shares, will, after depreciation of securities, be divided between the two Banks in certain proportions, but for the present will be held in reserve.

Great Benefit Expected.

The directors of both Banks believe that this arrangement, leading on to amalgamation, will be of great benefit to each other. Barclay and Company, Limited, will have a large field, hitherto untouched, open to them (at present there are only seven places where both Banks have branches), and the United Counties Bank, Limited, will be able to give larger facilities to their customers in the manufacturing and commercial centres in which they already carry on very important business. We consider, therefore, that from a national standpoint this amalgamation should be for the public benefit, both now and in the difficult times which must come upon us when the War has terminated.

Possible Alteration of Financial Year.

There is one other matter to which I should like to refer before putting the resolutions of which you have received notice. It is that possibly, I do not say certainly, we may find it convenient to alter our financial year so that it shall terminate on December 31 in each year instead of on June 30, as hitherto. If this is decided upon we shall, in January next, present to you an account of our doings for a period of six months only. We have always felt it to be somewhat of an inconvenience to have our financial year terminating in June, but that arrangement was made because this Company commenced business as a Company in July 1896. Now seems to be a reasonable opportunity for making what will be a welcome change to our directors, officers, and staff, and it will at the same time make the financial year of this Bank and that of the United Counties Bank coincide.

I do not know whether I am justified in adding one sentence to that, but personally I am not without hope that the Treasury Committee may, after all, see fit to sanction this amalgamation. (Hear, hear.)

I have now to move:—"That the agreement dated October 25, 1915, submitted to this meeting and made between this Company of the one part and the United Counties Bank, Limited, of the other part (hereinafter called 'the joint working agreement') be, and the same is hereby approved, and that the directors of this Company be and they are hereby authorised to take all steps which may be found necessary or desirable in order to carry such agreement into effect, including also the arrangement with the General Manager of the United Counties Bank, Limited, produced to this meeting and for the purpose of identification initialled by the Chairman." I will call upon Mr. Henry Birkbeck to second that resolution.

Mr. Henry Birkbeck: I beg to second the resolution.

The Chairman: Does any gentleman wish to make any observation before I put that resolution to the meeting?

There was no response to the Chairman's invitation, and he thereupon put the resolution, which was carried unanimously.

The Chairman: I have now to propose the second resolution, namely: "That Sir James Smith, Sir Gilbert Henry Claughton, Bart., Sir John Cousin Horsfall, Bart., and George Macpherson, Esq. (who have been nominated by the United Counties Bank, Limited, under the provisions of the Joint Working Agreement), be and they are hereby appointed additional directors of the Company." I see by the newspapers that Sir Gilbert Claughton is stated to be somewhat seriously ill. I trust that he may have a speedy recovery.

Mr. Seymour P. Beattie seconded this resolution, and it was also carried unanimously.

The Chairman: I may mention to you—and I am sure you will be interested to hear—that the four directors on this Board who will join the United Counties Board are Mr. C. H. Dent, Mr. E. R. Dodsworth, Mr. H. E. Snagge, and Mr. C. M. Woodbridge. That really concludes our business, and I thank you for your attendance.

Shareholders' Approval.

Mr. Millar Wilkinson: Gentlemen, I am quite sure that every shareholder present will support me with great enthusiasm when I say that I have risen to propose a vote of thanks to our Chairman, Mr. J. Herbert Tritton. It gives me great personal satisfaction to have the opportunity of doing this. At the same time, I should not be quite true to myself were I not to say that that great pleasure is somewhat modified by the remembrance that he is occupying the position, as he has told you, owing to the absence of our esteemed Chairman, Mr. F. A. Bevan, through indisposition. I am quite sure we earnestly hope that that indisposition is trifling, and that his absence is only temporary. I should like to take this opportunity also of saying how very heartily I approve of this amalgamation—or, rather, working agreement. I am a citizen of London of over 50 years' standing, so that I know something about these things. It is not the first success that Barclay and Company have achieved and in which I have been interested, but I think this is one of the best. I do not wish to introduce one word of politics, but at the same time I cannot for the life of me imagine what is the idea of the Treasury Committee in preventing the amalgamation. I have asked several people who, I felt sure, could tell me, but they could not suggest one word of explanation. Of course, this working agreement is tantamount to an amalgamation, and, as Mr. Tritton has told us, the amalgamation is sure to come, because Barclay and Company never take anything lying down. If they do not get a thing at one time they will go on until they do get it. Look at the price of these shares: ever since this has been mooted the shares of the United Counties Bank have risen, and so have those of Barclay and Company, owing to the delight which the proposal has given not only to the shareholders but also to that more importance body, the public, and I think the public are the best judges that I have ever met in the course of my life with regard to stocks and shares. I should like to say a great deal about this matter, because it is very interesting, but I think I have already said enough to show you what my opinion is. I therefore move a vote of thanks to Mr. Tritton for presiding, and I hope he will take steps to send to Mr. Bevan an expression of great regret at his illness, at the same time wishing him a speedy recovery.

Mr. G. Rowland Blades seconded the vote.

The Rev. Charles Leafe: I should like to be allowed to say a word or two. For many years I was a shareholder in the United Counties Bank. I joined in the amalgamation of the Nottingham and District, and I have a very high opinion of the directors of that bank, and am delighted to see them here to-day. I have a very high opinion of Barclay and Co., Limited. I have such confidence in the directors, having known them for so long, that even if I did not know where they were taking me I should be prepared to follow them, because I feel sure they will do what is right, as they always have done. I know they stand very high in the estimation of the public. I support this vote of thanks, and wish to show my appreciation of this working arrangement.

The vote was unanimously accorded.

The Chairman: Gentlemen, I beg to thank you very heartily and warmly for the vote of thanks which you have passed to me for the insignificant part which I have played to-day. It has given me great pleasure, although the absence of Mr. Bevan is a matter of great regret to me. I will certainly forward to him an expression of the shareholders' regret at his absence, and of their hope that he may be speedily restored to health.

The proceedings then terminated.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

THE annual general meeting was held at 15 St. James's Square, S.W., on November 5, Mr. John Coles presiding.

The Chairman, in the course of his speech, said: When I had the honour of addressing you in this room a year ago I reminded you that war upsets nearly all the actuarial calculations which govern life assurance. We do not know yet how long the War will last, or what results it may leave behind. I hope peace will come before June next, for the great problem before us, which I dare not attempt to solve to-day, is the value of our assets on June 30, 1916, when our valuation comes to be made. It was somewhat difficult to value our Stock Exchange securities on June 30 last, so the book valuation remains for the present as in 1914. The shrinkage in the value of our Stock Exchange securities is considerable, but not enough to impair our strong position, and fortunately only one-third of our assets (or, say, £2,000,000) is invested in these securities. More than half of these are repayable at par at varying dates. After careful consideration of the whole position I have come to the conclusion that 4% of our total assets—say, £250,000—would be an outside estimate of the depreciation on June 30 last. As regards our mortgages, we cannot find any weakness in any of them, and there is no interest overdue. I must not forget to refer to our investment of £768,000 in the General Reversionary Company. Our General Manager and Mr. Tilt have lately gone carefully into this item, and they find that its value is fully maintained. In view of the remarkable condition of the New York Exchange, we have, since our accounts were closed on June 30, sold a considerable portion of our United States Railroad bonds at about cost price and re-invested the proceeds in the new 4½% Government Loan. After converting our Consols and our first War Loan we now hold £310,000. We have no investment on the Continent of Europe. Amidst the depreciation of assets there is at least one bright spot, and that is the growth in value of these excellent freehold premises. They stand in our books at £18,000, and I am assured that they are worth to-day nearly £50,000. I should like to say a few words as to our bonus prospects. We are, it is true, in a transitionary period, and it is impossible to see far ahead, but our actuary informs me that the first three years of this quinquennium were remarkably prosperous and yielded unusually large profits, so that if peace had continued we should certainly have been able to divide next year a sum greatly in excess of the £750,000 distributed in 1911. Last year yielded nearly the usual profit from surplus interest, and in spite of war claims there was still some mortality profit, and the current year seems likely to give somewhat similar results. The prospects of bonus, therefore, apart from the question of depreciation of assets, are exceptionally good. I observe that a note of alarm has lately been sounded in the Press as to the outlook for with-profit policyholders in British companies which may cause some disquietude. But life assurance in this country is for the most part on firm foundations, and no fear need arise. The worst, I think, that can happen to the with-profit policyholders in any life office making quinquennial valuations is that on one occasion only their bonus may be diminished, followed, however, by much greater strength and earning power due to the writing down of securities and consequent

THE STATE AND THRIFT

REBATE OF INCOME TAX ON LIFE ASSURANCE PREMIUMS

THE STATE has shown its approval of Life Assurance as a means to National Thrift by allowing a liberal rebate of Income Tax on Life Assurance Premiums. This concession applies equally to WHOLE-LIFE ASSURANCES and ENDOWMENT ASSURANCES (within certain limits) on the life of the taxpayer or his wife. No other mode of investing money offers similar advantages.

A SCOTTISH WIDOWS' FUND

Policy, besides entitling to rebate of Income Tax at the present high rates, enables the Policyholder at once to restore the capital value of his investments by small annual payments out of income.

SCOTTISH WIDOWS' FUND.

Funds: 22 Millions. Claims Paid: 43 Millions.

Manager & Actuary.

increase in the rate of interest. The Chairman then dealt with the figures in the annual report, and pointed out that the net new business amounted to £672,000. This, he thought, was a very satisfactory total for a year which included eleven months of war.

The report was unanimously adopted.

WESTERN CANADA INVESTMENT COMPANY, LIMITED.

THE eighth annual general meeting was held on November 5 at the offices of the Company, 24 Coleman Street, E.C., Mr. J. G. Colmer, C.M.G., presiding.

The Chairman, in moving the adoption of the report, said that the total revenue for the year was £19,726, as against £20,630 in the preceding year. The slight falling off was explained by the fact that in the year just ended no credit was taken for certain sums earned by the Company, but which were not at present available. The net revenue was £11,710, as against £12,601, and the amount brought forward was £6,364, making the net available balance £18,074. After deducting the Preference dividend there was a surplus of £13,599. It was proposed to utilise that amount by writing £1,000 off preliminary expenses—reducing the item to £2,000, and adding £5,000 to reserve, which would be raised to £9,000. After paying a dividend on the Ordinary shares of 3½% they were able to carry forward to next year the substantial sum of £5,809. There were rather more arrears than usual, but he thought it would be agreed that, in view of the prevailing conditions in almost every part of the world, arising out of the terrible war, the balance sheet was satisfactory. In the opinion of their local advisers in Winnipeg the loan accounts of the Company were generally in a good condition and need not cause any apprehension. It was believed that collections would improve, in spite of the operations of the moratorium in some parts of the country. The encouraging feature in the outlook was the splendid crop which Canada had obtained this year. It was by far the largest on record, and it would give much gratification in the United Kingdom, where, they hoped, most of it would be marketed. It was also causing general jubilation in the Dominion, as it would put a good deal of money into the pockets of the people, and the results would certainly be beneficial to Companies like theirs which had to look forward to payments on account of advances—both principal and interest. A larger dividend could easily have been paid out of the funds at the disposal of the Company, but after careful consideration the directors deemed it wise to conserve their resources, so that the Company might retain the strong position it had always occupied, and be in a better position to meet any emergencies that might arise. Government contracts for munitions and supplies of all kinds had been arranged in the Dominion to the extent of about £100,000,000, and the business activity that would be necessary to execute those contracts must beneficially affect every part of Canada.

Mr. G. W. Currie, M.P., seconded the motion, which was carried unanimously.

BUENOS AYRES AND PACIFIC DIVIDEND.

THE Buenos Ayres and Pacific Railway Company has declared a dividend of £2 16*s.* 6*d.* per cent. on its 5% Second Preference stock in respect of the past twelve months, against the full rate a year ago. This automatically implies a corresponding distribution on the Ordinary stock of the Argentine Great Western Railway Company. The drop in the dividend was generally anticipated, and, having regard to the heavy loss in earnings, it is probable that the Company has only succeeded in making such a distribution by drawing upon the balance brought in from last year. The decline in gross receipts was £321,000, or 6.5%, and although a considerable reduction has doubtless been effected in working expenses, it is not likely to have been sufficient to prevent a fairly heavy drop in profits, especially as higher interest charges have had to be met. However, the Company is now doing very much better, and in the first 18 weeks of the current financial year the improvement in earnings has been as much as £293,000, or within £28,000 of the loss sustained for the whole of 1914-15. The crop outlook, moreover, is very encouraging, and there is little doubt that twelve months hence the Company will have fully regained the position it held prior to the outbreak of war. The price of the Ordinary stock is about 46, and the Second Preference stock is quoted at 64. The Ordinary stock of the Argentine Great Western Company is also quoted round about 64.

UNITED RAILWAYS OF HAVANA.

United Railways of the Havana and the allied companies in the past twelve months. All three undertakings showed satisfactory increases in earnings, and these increases have been accompanied by economies in working. The gross receipts of the United Company expanded £81,000, or about 5%, and the working expenses were reduced by £61,000, or 6.8%, so that notwithstanding some increase in charges the gain in profit comes out at £137,000, or 23.1%. The balance available for distribution amounts to £589,800, a sum equal to about 9% on the Ordinary stock. The payment of a dividend of 5% for the year requires £328,000, and there is thus a surplus of £261,800, of which £260,000 is placed to various reserve and renewal funds and £1,300 added to the balance carried forward, which is raised from £14,217 to £15,549. Twelve months ago the dividend was at a similar rate, but it was paid in the form of 5% Debenture stock, and the reserve and other funds received £140,000. The excellence of the year's results will be appreciated by a glance at the accompanying table:—

Year—	1914-15	1913-14	1912-13	1911-12	1910-11

Carried forward	15,549	14,217	16,330	17,881	12,701

The Company is likely to do much better in the current year, having regard to the continued big demand for Cuban sugar and the high prices at which it is being sold. Since the end of June the increase in earnings is as much as £92,955, which goes against a falling-off last year in the same period of only £17,623.

"The flourishing condition of the sugar industry," writes the general manager, "should favourably affect our traffic, as we expect to carry large quantities of heavy machinery, together with other local materials, such as stone, sand, lime, cement, etc., required in its erection. The improvements which are being carried out at the mills will also keep a large number of men employed, resulting in a greater consumption of foodstuffs in the country, and our traffic in this general merchandise from the port to the interior should increase." Regarding the sugar position, he states that there is a considerably larger quantity of cane available for grinding this year, and should be much richer in sugar and give a larger yield. He estimates that the crop will yield 943,317 tons of sugar, equal to 6,309,817 bags, representing an increase of 6% over the 1914-15 figures, which was the largest ever handled by the Company.

The price of the Ordinary stock advanced on the dividend announcement and is now quoted at 78½. As this includes the full year's dividend of 5%, the yield afforded is as much as £6 16*s.* 9*d.* per cent.

Sudan Gold Field.—Capital £63,874, in 10*s.* shares.

GOLD COIN AND BULLION HELD FOR THE TREASURER OF THE COMMONWEALTH.

The Bank also holds in Gold Coin and Bullion for the Treasurer of the Commonwealth ... £5,700,623 18 2

Sydney, 18th August, 1915.

DENISON MILLER, Governor.

We certify that the above Balance Sheet, compiled from Statements furnished by the several offices of the Bank, is true and correct.

H. T. ARMITAGE. D. B. MURDOCH.

AUDITOR-GENERAL'S REPORT.

In accordance with the provisions of Section 20 of the Commonwealth Bank Act, 1911, I have to report that the Aggregate Balance Sheet of the Commonwealth Bank of Australia for the half-year ended 30th June, 1915, has been examined by officers under my direction, as well as by myself. The several items of the account, as above set forth, have been verified with the books and vouchers, with the securities held by the Bank, and with Statements certified by the respective Managers and Accountants of the Bank.

I have obtained all the information and explanations required by me. The said Balance Sheet has been prepared in the form prescribed by the Regulations under the Act, and, in my opinion, it exhibits a correct view of the affairs of the Bank.

I have also to report that the sum of £5,700,623 18s. 2d. above set forth was held by the Bank in Gold Coin and Bullion for the Treasurer of the Commonwealth.

J. W. ISRAEL, Auditor-General for the Commonwealth.

31st August, 1915.

CITIES SERVICE COMPANY.

At a Special Meeting held by the Board of Directors of the Cities Service Company the following resolutions were adopted: "Whereas dividends were declared on the Preferred stock of the Company on the 1st day of October, 1914, and on the 1st day of January, 1915, each amounting to the sum of One million dollars, and whereas the Company has issued this stock and the proceeds thereof have been used for the purchase of oil and gas producing properties and for the development of oil and gas producing properties and working cash capital. And whereas it is provided that their stock will not be offered to the public at present and purchasers may withdraw their stock from the syndicate, it is agreed that the Preferred stock may not be sold at less than 85 per cent. of par, and Common at not less than 5 per cent.

Holders of Preferred stock of record December 15th will be entitled to receive on January 1st 1916 Convertible Debentures of the Company to 9 per cent. of their holdings as payment for the said deferred dividends to that date, the holders to have a right to convert the Debentures at any time into stock and to receive [illegible] stock and 5 of Common stock for each one hundred dollars in Debentures.

Holders of Common stock will have 9 per cent. in Debentures as aforesaid [illegible] certificates issued to holders of record December 15th, which will entitle them to receive Debentures when all holders of Preferred stock have been paid the said dividend. The Company will issue similar [illegible] dividends in cash on its Preferred stock [illegible] to holders of record January 15th.

E. MACKAY EDGAR, Vice-President.

London,
November 14th, 1915.

MONEY.

HIGHER RATES.

The need of the Government to borrow from bankers, either by the sale of Treasury bills or by short loans, has completely changed the condition of the Money market since the final payment was made upon the War Loan, and ot is obvious that there will not again be any surplus supply of money in the market until the nation becomes more economical and the foreign exchanges are adjusted. Were we a self-contained nation, loans to the Government, followed by disbursements, would cause the money to become available again for further loans. But Great Britain is far from being self-contained, and consequently the great Governmental expenditures, unattended by corresponding economy in the domestic expenditure, must inevitably cause great exports of gold, thus curtailing the power of bankers to lend. Fortunately the Bank of England is able to replace some of the gold exported by gold coming to hand from South Africa and by obtaining gold from the banks of France and of Russia. Nevertheless, the loss of gold is substantial. In the week to Wednesday last the sum of gold shipped was £3,210,000, against which there were arrivals of £1,616,000. The net loss was thus £1,594,000, and yesterday and to-day nearly £3,000,000 of gold has been sent away.

Possibly when the arrangements for creating exchange in America are completed, and the £96,000,000 of money raised by Great Britain and France is fully available for exchange purposes, and the proposed credit in New York on account of British bankers for £40,000,000 is available, the export of gold from London to New York will become smaller. At the present moment, however, in spite of the credits that have been arranged and are in process of arrangement, large amounts of gold are being sent daily to the United States. Moreover, when the American exchange is adjusted the ability of a great many miscellaneous countries to draw gold from London will remain. A statement we give elsewhere shows clearly the really striking change that has occurred in our trade balances with individual countries since the War began. If it be borne in mind that as regards our loans of capital to other lands we are now lending in war more than we did in peace, and that over and above the great balances in favour of other countries as shown by the Government returns, we have to provide great sums in respect of our advances of capital, and in respect of Government stores, less, of course, our income from interest, shipping, &c., one realises that a great drain upon the gold supplies of this country must inevitably continue until steps are taken to curtail our enormous purchases of foreign goods and to increase our exports of British goods. With an adverse trade balance of some £600,000,000 a year, gold will continue to be exported in spite of all the credits we may obtain in the United States, Canada, and elsewhere. If, however, steps were taken to induce or to compel the nation to become more economical in its domestic expenditures there would immediately be a curtailment of imports and an expansion of exports, and a far greater sum would be provided for exchange purposes than can possibly be found out of the nation's gold fund. Of course, the country possesses a large stock of gold which it can export, and beyond the gold it holds there is the daily output from South Africa, while the Banks of France and of Russia can supply considerable sums. But it will be obvious that if we pour out gold upon the world after our present manner we shall create a degree of inflation which will force the prices of commodities up to figures not reached since the days of Napoleon.

Already the situation in the United States gives evidence of this danger. The speculation in securities and in commodities is becoming rampant, and the great boom in trade which seems to be at hand will cause America's consumption of goods of all kinds and descriptions greatly to increase. And it is evident that these conditions will soon spread to other countries. Hence the need to restrict the national expenditures at the earliest possible moment, in order to provide for the adverse trade balance not by shipments of gold, but by shipments of British goods and reduced imports, as well as by sales of securities and by credit operations.

Now that the Government is dependent upon the Money market to finance the War for the time being, it has found it desirable to advance its rates for Treasury Bills to the basis of 5% all round for three, six, nine, and twelve months' bills. In consequence of this advance open market rates of discount to-day have risen to 5⅜% for bills of all maturities from two to six months.

INDIA STERLING BILLS.

Tenders were received at the Bank of England on Wednesday last for India bills to the amount of £3,500,000, in replacement of bills for £2,500,000 falling due on November 16, and in partial replacement of bills paid off temporarily during the current financial year. The bills are dated November 16, 1915, and will run for twelve months. The applications amounted to £6,175,000, those tendering at £94 12*s*. 3*d*. receiving about 78%; above in full. The average price at which the bills were disposed of was £94 12*s*. 11.87*d*., equal to an average discount rate of £5 7*s*. 0.13*d*. per cent.

BANK OF ENGLAND.

On balance for the week ended Wednesday £1,594,000 in gold was withdrawn from the Bank for export, but as £290,000 returned from the country, the net loss of gold was £1,304,000. The note circulation declined £235,000, and the net loss of reserve was thus reduced £1,069,000. The gold now held is £55,351,000, the note circulation is £33,199,000, and the reserve £40,603,000. There was a decline of £5,359,000 in other deposits, due to an addition of £3,421,000 to the public deposits, a reduction of £873,000 in other securities, and the loss of over a million in reserve. The proportion of reserve to liabilities is slightly lower at 29.13%.

MONEY IN NEW YORK.

The supply of money in New York is superabundant, and call loans are obtainable at less than 2%. The reserves of the Associated banks steadily increase, and now stand at £147,218,000 in comparison with only £92,000,000 at the beginning of the year. These enormous resources are causing bankers to make loans liberally, and last week the expansion was over £8,000,000, making a total increase of over £100,000,000 since the end of July. The deposits last week increased over £9,000,000, and since the beginning of the year have expanded £243,000,000. The surplus reserves were last week reduced only £440,000 notwithstanding this great increase in the deposits, and still amount to £38,300,000.

A BRITISH CREDIT IN NEW YORK.

An important event of the week has been the formation in New York of a bankers' committee for the purpose of handling a credit reported to be for £40,000,000 for account of London bankers. The Chairman of the committee is Mr. F. A. Vanderlip, the President of the National City Bank, and the committee includes the leading bankers of New York, Chicago, and Montreal. The committee representing British bankers working in co-operation with the New York committee consists of Lord Cunliffe, the Governor of the Bank of England, Sir Edward Holden, and Sir Felix Schuster.

The Irving National Bank of New York notify us by cable that the following rates of exchange are current in New York:—

		Rate Nov. 11	Par in each case quoted	Discount %
New York on —				
London ...	sight	$4 76½	4.86½ dollars for £1	4·3
,, ...	cables	$4 66½		
,, ...	bankers	$4 76¾		
Amsterdam	sight	41¼	40¼ cents for 1 guilder	Premium 3·7
Berlin ...	sight	81¼	95 cents for 1 marks	14·3
Copenhagen	cheques	26½	26¾ cents for 1 kronen	1·3
Italy ...	sight	6·17½	5·18 lire for $1	24·7
Paris ...	sight	5·20¾	5·18 francs for $1	15·0

Mexico ...	Mex. silver $	50	50c. 1 Mex. $	24·0
Switzerland	sight	5·16¾	5·18¾ francs for $1	3·0
Vienna ...	sight	14 50	24¼ cents for 1 kronen	28·3

Rates for prime commercial paper and for call loans in New York are as follows:—

Nov. 11, 1915 ...	Prime paper ...	3–3½%	Call money ...	1¾	2%
Nov. 13, 1914 ...	,, ,, ...	5½–6%	,, ,, ...	4½	6%

MONEY IN INDIA.

Exchange from India remains firm at 1s. 4 3/32d., and the Council has no difficulty in selling the 50 lacs of drafts it is offering for tender. The demand for money in India is increasing. The rates of the banks of both Bengal and Bombay are now 6%. The withdrawal of coined silver from the Currency Department is proceeding, and last week the reduction was 84 lacs, reducing the amount of silver held to 3,555 lacs.

The following are the minimum Rates of Discount current in India:—

Bombay ... 6 per cent. (Nov. 4, '15) | Bengal ... 6 per cent. (Sept. 24, '15)

Particulars of the Tenders received and the Allotments made by the India Council on Wednesday last, November 10, are:—

Bills.				Telegraphic Transfers			
Rate.	Tendered.	Accepted.		Rate.	Tendered.	Accepted.

The following Special Sale has since been made:—

	Rs.	At
Bills on Calcutta	50,000	1/4 1/16

From April 1 to November 9 inclusive the Council granted remittances for Rs. 7,90,36,061, realising £5,270,070. Up to November 10 of the last financial year the total bills and Transfers sold was Rs.6,13,36,861, realising £4,091,751. The total sales for the week ended November 9 amounted to Rs. 50,00,000, realising £334,066. The amount to be offered for tender next Wednesday was also 50 lacs.

SILVER.

With a fairly strong demand for coinage and for the Continent, and with small arrivals, the Silver market has been firm, and the price has advanced this week from 24 3/4d. to 24 7/16d. Having regard to the increasing prosperity of the East, a further rise in the price of the metal seems probable in the not distant future.

Stock Exchange.

All men of German or Austrian parentage, as well as those of other nationalities, before they can become members of the Stock Exchange must, according to long-existing rules of the Stock Exchange, have resided at least seven years in this country, and have taken the position of naturalised Englishmen for at least two years. Some existing members of such character have been such for very long periods, and have given pledges of their loyalty to the country whose naturalisation rights, many years ago, they accepted, they having sons or near relatives fighting for the land of their adoption. There are others who are more than suspected of having become entitled to membership of the Stock Exchange, through naturalisation, not from disposition to permanently become naturalised Englishmen, but as a means to the end of making a fortune in this country and returning to the Fatherland. There are the extremes also of men who had spying and sinister financial designs inimical to this country under their naturalisation cloak, and a position that opened society circles to their use.

It turns out to be correct that the meeting of Stock Exchange members convened for Wednesday last was for the purpose of considering what is termed "the alien question." There were "whole hoggers" at the meeting who wanted the Committee to turn out every such naturalised member of German or Austrian birth or descent. A small minority of those present at the meeting, however, expressed more considerate views, but apparently there was unanimity in the request that in the future no naturalised German or Austrian should be admitted to membership, and that members who in May were warned against possible friction if they put in an appearance in the House should continue absent during the period of war. This is a simple measure, but one, in the circumstances, we quite concur with. In the matter of non-election in March next of existing members, the "whole hog" policy, however, in our opinion, is going too far. Parenthetically, we take exception to the disposition of some of those present at the meeting to consider anyone who did not agree with them as of Germanophile sympathies, and we would point out that the petition submitted for the signatures of members present, and since lying in the Stock Exchange for additional signatures, is worded with the view to strengthening the Committee's powers to exercise discrimination and consideration for men whose loyalty is beyond suspicion.

In most directions the general Stock markets have suffered from profit-taking and reaction. There has been less of this noticeable in the Home Railway department than might probably have been looked for; not but what the rise in this department had been only carried to a slight extent. Armament shares have been somewhat inquired for, the principal feature being the appreciable hardening of price of Thornycrofts. The dividend policy of this Company should shortly be known.

Mining Topics.

As a whole, movements of the week in mining shares have been somewhat irregular, and business has also been on a smaller scale than previously was noticeable. Changes in Rand shares have been unimportant. Here and there slight fractional reactions have occurred after the recent considerable augmentation of prices, and here and there also small gains have been recorded. In the Eastern Rand section Brakpans have been in favour, and Modders slightly appreciated, though not holding the best price. An active business continues to be done in City Deeps, but the best price has not been held in this case.

Diamond shares have held their ground, and show but slight variation. A feature of the week has been the revival in the market for Russian descriptions. Really the rise was initiated quite at the close of official hours on Friday last week; though the best prices have not been maintained, a fair advance compared with midday prices of Friday last week is shown. The sharpest movement was the recovery in Russo-Asiatics, which at one time touched 4⅜, and Irtysh shares, which have been scarcely mentioned for a long while past, rallied to 1⅛. Kyshtims improved to 2, Tanalyks to 2⅛. These were the best quotations, but are not the closing prices.

Incidentally last week we referred to the hampering of operations at the Ridder Mine after the war declaration by the withdrawal of labour for military purposes and the calling up later of additional men for the Army. We have since learned that as a set-off against this drain of labour there has been a welcome influx of labour derived from the employment of prisoners, chiefly Austrians. Austrian Slavs and Austrians from the Trentino region have been willing labourers, and many of them, having a handicraft at their fingers' ends, have been put to construction work, as well as mining operations, at the Ridder mine and the coal property belonging to the Irtysh Corporation. Railway communication between the Ridder mine and the river is being pushed on, and an extension of concentration plant at Ridder and smelting and furnace plant at Ekibastus is being effected. We look forward to some official statements shortly, as the reports of both the Russo-Asiatic and Irtysh corporations are likely to be issued before the end of the year.

GEDULD.

Of mining claims of individual producing companies in the Far Eastern Rand the Geduld Proprietary Mines, Limited, owns the second largest area, which is 2,481 reef-bearing claims. Such area is only exceeded by the Government Areas, which possesses 2,633 claims. It may be of interest to mention that the claim areas of the other producing companies in their order of magnitude are the Kleinfontein, 1,567 (intact); Modder B, 1,400; Brakpan, 1,050½; New Modderfontein, 1,050 (intact); Van Ryn Deep, 764½; Modder Deep, 577.

With the Geduld Proprietary Mines, Limited, there is ownership of the freehold of the whole farm of 8,474 acres, such total freehold including the mynpacht area of 2,481 claims the Company is now developing. The Company is entitled to mine under its own mynpacht, and in case other area of its freehold is taken up for mining it may either receive one-half of the mining dues that are payable to the Government, or, in case the Government comes to an arrangement for the working of the estate area, some other agreement may be come to other than the sharing of the mining dues. Having thus defined the position of the Company as to the area it possesses we may next comprehensively deal with its financial history.

The Company was formulated in March 1899, and of the initial capitalisation 185,000 shares of £1 were the consideration given to the vendor, Geduld Syndicate, which had secured borehole proofs of the existence of payable reef. A first issue of working-capital shares was made at par, but subsequently considerable issues were made at premiums. The best way of disposing of a somewhat intricate subject is to tabulate the history of the Company as below:—

On formation of Company, March 1899, capital fixed at £400,000, in £1 shares.

		Issue of Shares	
Mar. 1899.	Purchase consideration to vendors - Geduld Syndicate	185,000	£400,000
" "	For working capital, subscribed by A. Goerz and others at par	140 000	
Feb. 1901.	Shares issued at £4 5s. each	54,166	
Mar. 1902.	Option exercised at £4 10s. each	20,834	

1902. Two subsidiary companies formed to work the north and central parts of the mynpacht. Each Company with £400,000 capital. These companies started shafts Nos. 1, 2 and 3. December 1905, No. 2 shaft met reef at 1,604 feet depth; June 1906, in No. 3 shaft at 1,839 feet. In October 1906 the properties, as also that of a tentative "A" subsidiary, were reabsorbed by the parent Geduld Proprietary Mines, Limited.

Oct. 1906.	Issue at £2 2s. 6d. per share	90,100

Oct. 1907. Capital (authorised) increased to £750,000.

Nov. 1907.	Issue at par (with options at 25s. and 30s. on 50,000 and 50,000 shares) ...	100,000
" 1908.	Option shares taken at 25s.	50,000
" 1909.	Option shares taken at 30s.	50,000
May 1909.	Sale to A. Goerz and Co. at 65s. per share (option to end of year on 29,900 shares at 70s., not exercised)... ...	30,000
Apr. 1910.	Sale to A. Goerz and Co. at 50s. ...	29,900
	Total issued capital	750,000

Aug. 1911. Capital increased to £1,000,000 (authorised).

May 1912.	Issue at par (option to guarantors to June 1914 on 100,000 shares at 25s. per share)	125 000
May 1914.	Option exercised and balance option extended at 25s.	47 500
June 1915.	Option exercised at 25s. per share ...	47,500
		970,000

Issued capital, June 1915, of authorised £1,000,000, £970,000.

In the detail above it will be noticed some of the issues of shares were made at big premiums. The

highest price at which the Company was able to sell working-capital shares was £4 10s. in 1902. The aggregate amount of premiums received by the Company [illegible] was £523,921, and of such amount £415,464 has been applied to writing off costs of shafts, development, buildings, &c., leaving still unappropriated a balance of £108,467 of share premiums.

Note should be taken of the inconsiderable purchase price—£185,000 in shares—given for the freehold and mining rights, and, further, the ability to secure over £520,000 of premiums on issues of shares, enabling the Company to effect very heavy writings off and putting it in a clean position at the present time in respect of its issued capital of £970,000. We may here say that the issued capital puts the Company in funds that will about pay for the increased equipment, which will towards the end of 1916 mean that the Company's mill will have an operating capacity of 40,000 tons a month.

The total cost of shaft sinking, development, power, reduction plant, &c., to the date next year of [illegible] with 180,000 tons a year output may be stated approximately as under:

Par value of shares issued for working capital	...	£785,000
Premiums on " " "	(say)	525,000
		£1,310,000

Of the £1,310,000 total outlay about £415,000 of premiums on shares has been written off.

We may note that the Company's net profits for the time the smaller plant is in operation, and later on when the larger plant is crushing, will be available for dividend purposes. There may be some small amount of profits applied to capital expenditures in case of under-estimation of costs and for effecting developments, but substantially the £970,000 is clean capital, on which dividends will be paid.

We have [illegible] when the property was acquired existence of reef had been secured from borehole tests. Three bores had been sunk in the north-west portion of farm Geduld, and in all three reef was intersected. This was prior to the outbreak of the Boer war. The borehole indications rather fired the imagination, for in two of the bores high assays were shown, in one particularly so. While we would remind our readers that borehole tests are not an infallible guide of what the value of the reef formation is: one bore in a poor zone may show a low assay, and another bore may meet a rich patch, and either would be liable to give misleading ideas. We may emphasise this by pointing out how, in the Brakpan, intersection of reef in the first shaft was in a poor zone, but in the south or second shaft good pay ore was met with. What the actual showings of the three Geduld bores were is worth setting out. Bore No. 1 was at the extreme north-west corner; some 6,000 feet south of the No. 1 the No. 2 bore was sunk, and the No. 3 bore met reef approximately 7,000 feet to the east of the No. 1 bore. The position of the two shafts that were sunk by the subsidiary companies in 1902 and came on reef were selected because of the bore showings, which were as follows:—

No.			
1	[illegible]	[illegible]	[illegible]
2	1,724	[illegible]	[illegible]
3	2,156	[illegible]	[illegible]

In the sinking of the shafts there was much water trouble in the dolomite formation. After a certain amount of development an initial plant of 50 stamps was erected, and a start therewith was made on November 1, 1908. In February 1909 an influx of water prevented proceeding with milling operations; indeed, so severe was the influx that it flooded the mine. Power for pumping plant had to be obtained, and all mining operations were put an end to for a while. A restart of the mill was effected February 1, 1910.

The progress made in developing ore reserves after reopening of the mine is indicated by the amounts of ore reserves reported in sight at December 31 of each year mentioned below:—

[illegible]			
1911	[illegible]	[illegible]	[illegible]
1913	... 1,757,000	[illegible]	[illegible]
1914	... 1,900,000	[illegible]	[illegible]

It will further be noticed that year by year since 1912, with an increase in the assumed stoping width there has been an increase in the grade, such

being indicated in the table above, showing the quantity of the ore reserves, the assay values, and what the stoping widths applied to assay values mean as to shilling-inches.

The results of operations are set out below:—

From start of mill, November 1, 1908, to February 10, 1909, about 30,000 tons were dealt with. Mine flooded early in 1909, and mill shut down from February 10, 1909, to February 1, 1910.

Yr. ended Dec. 31	Tons Sold	Yield per Ton	Amt.	Per Ton	Amt.	Per Ton	Amt.	Per Ton Dividend

Gold reserve: 4,431 oz. July, August, September, October.

on surface.

In 1913 an extension of mill plant to 60 stamps and five tubes was effected, and consequent on a long period of shortage of labour further extension deferred. A still further extension, however, was decided on in October 1915, such extension designed to bring up the capacity of the reduction plant by late in 1916 to 40,000 tons per month. Consequently recent results are no true criterion of what future results will be, for the effect of extension of plant is to spread the standing charges over a larger tonnage and to generally bring down working costs per ton. To the present operating costs have been high, and there is room for a considerable reduction. It will be of interest to give what the actual results were for 1914 and an estimate of what may be expected to be about the results of 1915. The contrast is set out below:—

Years to Dec. 31.	1914	Per	Estimate for 1915	
	£			£
Revenue (244,585 tons)	395,457	32 4	(306,000 tons)	476,000 31 1
Expenditure				
Mines profit	96,968	7/11		151,000 9,10
Sundry revenue	10,647			10,000
	107,615			
Depreciation, Donations,			£7,000	
Taxes			18,000	
Dividend (5%) ...	46,125			
Surplus	43,014			136,000
	66,260			
	110,474			

The £136,000 estimated surplus of 1915 equals not quite 15% on the £970,000 issued capital. Considering the £110,474 of unappropriated profit, a dividend of 10% could be declared in December, but, with a view to conserving resources to effect developments ahead of mill requirements, the directors may decide to declare only 5%, making, with the June distribution, 10% for 1915.

Estimate on Enlarged Plant.

	£
Revenue, 480,000 tons at	
Expenses, 480,000 tons at	
Mine profit, 480,000 tons at 11s.	
Sundry revenue, say	
Taxes, &c., say	
20% dividend on £970,000=	

So recently as October 9 we formulated in these columns an idea of the future, pointing out that a recovery value of only 30s. per ton, if accompanied by working costs of 19s. per ton, would, on the rate of 480,000 tons per annum, give a net profit, after allowance for taxes, &c., equal to over 20% on the capital, and we would further point out that a combined increase of 1s. per ton in the extraction, and reduction of a like amount in the working costs, would raise the profit on 480,000 tons a year to an amount to return 25% dividend. Each shilling per ton saved in costs, or added to the grade, represents 2½% on the capital. This influence of 1s. per ton on dividend is important.

While we have in these remarks dealt with the estimated amount of ore brought into sight, it will be of interest to give the recent showings of development operations, and these are as set out below:—

	Feet Sampled	s.	d.	Inches	Shilling-Inches
1914 Mar. qr.	1,245	36	1	35.2	1,267
,, June qr.	1,375	35	7	38.1	1,162
,, Sept. qr.	1,565	28	0	30.6	856
,, Dec. qr.	1,175	25	1	39.9	997
1915 Mar. qr.	1,545	29	9	37.4	1,112
,, June qr.	1,795	37	5	39.6	1,481
,, Sept. qr.	2,420	29	9	38.2	1,133

On the point of going to press the September quarter statement has come to hand.

The ore reserves last year were calculated on an average of 30s. 2d. per ton, based on a stoping width of 59.5 inches, but as much rock, broken down with reef, is left underground, it follows that what material is raised is appreciably better as to gold content than the 30s. 2d. per ton indicated above on full 59½ inches assumed stoping width.

Though comparisons are regarded as odious, it may be worth noting what are the details as to Geduld working costs in contrast with a mine of kindred character—the Brakpan. The total working costs of the Geduld for the June quarter, including mine redemption, were almost exactly 21s. 5d. in respect of 74,760 tons milled in the period, and this compares with almost exactly 17s. 10d. for the Brakpan (September quarter) in respect of 190,300 tons milled in the September quarter. The contrast of charges is given below, and it should be noted that the detail of the Geduld is in respect of the June quarter, while that of the Brakpan is for the September quarter:—

Working Expenditure per Ton Milled

	Geduld	Brakpan
	s. d.	s. d.
Mining	11 6·1	11 0·1
Milling	3 9·1	3 2·7
Treatment	3 0·2	1·5
Expenses, Head Office and Rand		
... ...	0 4·8	0 2·5
Mine development redemption ...	2 9	2 6
	21 5·2	17 3·9

In the report of the Geduld's Consulting Engineer dated February 6, 1915, he called attention to development outlays, and we quote his words:—

"The development account stands in the books at £179,505, or 1s. 10.7d. per ton of developed ore, while 3s. 3d. per ton milled (equal to 2s. 10.9d. per ton of mined ore) was written off in 1914 for development redemption. The amount written to working costs for development redemption may now be safely reduced to 2s. 9d. per ton milled."

This amount of 2s. 9d. per ton has been charged as working costs throughout the present year, as against 3s. 3d. per ton previously. With the one Company there is a larger tonnage to spread the cost over than with the other; hence the difference between the aggregate costs of the Geduld and the Brakpan. It remains to be seen how Geduld working costs will be affected when the enlarged plant comes into operation.

In dealing with the question of life it would be wise to make a very large allowance for the proportion of area where reef matter of unpayable character may be encountered, and also for possible faultings, supporting pillars, &c. Though this deduction may look very drastic until something more of the nature of the property is ascertained, we may assume a life based on the payability of only one half of the total claim area, recalling, however, that the whole of the area is reef-bearing. With a dip of eight degrees, each foot stoping width represents 5,400 tons per claim. A proportion of the rock broken down with the ore has to be left underground utilisable for pillars. Also there would be some elimination of waste on surface, which, parenthetically, we note is

now reduced to a very small percentage. What the average of net mill tons after sorting may be depends upon circumstances, but assuming a total under- and above-ground sorting of 15% and 5 feet stoping width as an average, the outcome would be, say, 22,950 mill tons per claim: 5,400×60 inches=27,000 stoping tons, which, less 15% sorting, equals 22,950 mill tons per claim. Then

	Mill Tons
1,240 net payable claims at 22,950 mill tons per claim ...	28,458,000
Used to December 31, 1914	863,000
Remaining at January 1, 1915...	27,595,000

It may therefore be roughly calculated that on the use of 480,000 tons a year it would mean a life of, say, 57 years. With so large a property it will doubtless be the case, if labour proves adequate and times are propitious for effecting the capital outlay, that a further step in the direction of enlargement of plant will be taken, but meanwhile, ignoring the broken period, on the milling of the 40,000 tons per month, and assuming varying dividends, the value of the shares on different dividend bases, on a life of only 50 years, would work out as below, assuming that the investor requires 10% for income, and invests the excess received at 5% compound interest to redeem his capital at the end of the life.

Assumed only 50 *Years' Life on* 480,000 *Tons a Year.*

Assumed average rate of dividend ...	20%	22½%	25%
Present value of £1 share	£1 18s.	£2 2s. 9d.	£2 7s. 3d.

In case by five years hence a policy of doubling the capacity of plant is carried out and thereby dividends are, say, doubled, values would be appreciably modified, and then remain as under:—

Assumed 25 *Years' Life on* 960,000 *Tons a Year.*

Assumed average rate of dividend ...	40%	45%	50%
Then five years hence value of share...	£3 0s.	£3 14s. 6d.	£4 2s. 6d.

The data may not be fallen in with as proper bases by all readers, but they give certain facts that enable calculations to be varied according to individual opinion.

The present market price of Geduld £1 shares is about 34*s*.

RAND GOLD OUTPUT.

THE gold output and labour return from the Rand for October is of very satisfactory character. Compared with six months ago, the labour roll has increased by about 25,000 boys. The October gold output is a record one. The figures are as follows:

	Tons Milled and Yield per Ton		Value
	Tons	Yield	£
1912	25,488,361	29/0	37,182,746
1913	25,628,432	27 9	35,812,605
1914.			
First half	12,308,282	26 11	16,609,705
Second half	12,793,672	26/3	17,514,729
Year 1914	25,701,954	26/7	34,124,434
1915.			
6 months	13,734,393	26/4	18,066,014
July	2,495,347	26/4	3,153,980
August	2,418,447	25/11	3,183,981
September	—	—	3,182,548
October	—	—	3,289,893

The returns of natives recently employed in gold mining are as follows:—

1915							
Oct.	Sept.	Aug.	July	June	May	April	Mar.
210,017	204,833	196,286	190,25	184,75	183,961	186,941	185,259

KNIGHT CENTRAL.

WE recently commented upon the recrudescence of an inquiry—alleged to be on Cape account—for the shares of this Company, and also the rumours of private advices of good discoveries, and mentioned that no official information anent good discoveries had been made public. Apparently, however, at the time we were writing official news had been received, as we have before us an official circular bearing the date October 22—such document did not come into our possession until October 25—but, so far as we know, not till that morning did the information appear in the Press. In THE STATIST of October 9 we mentioned an advice dated October 4, stating that a cross-cut to the south from the 17th level had met South Reef which indicated an average of 35*s*. 3*d*. over 12 inches stoping width The cabled advice published by the circular dated October 22 said: "Upper portion South Reef intersected, assays, four samples, average 12½ dwt. over 60 inches." It will be interesting to know if this intersection of "upper portion" has any connection with the first intersection reported on October 4.

RAND PROFITS.

A CONTRAST of the profits of each of the last four months is given below. It should be noted that sundry revenue is included in the profits:—

	Sept. £	Aug. £	July £	June £
Aurora West	3,122(*a*)	4,039	4,074	4,162

(*a*) Operations adversely affected by a breakdown at the end of September of one of the compressors, which was in process of repair at the end of September.

(*b*) Reduced profit due increased costs, owing shortage labour and return to more normal recovery. Grade April and May abnormally high.

(*c*) Return states "yield recently has been higher than that called for by the ore reserves."

(*d*) Increased profit due to what is regarded as a temporary enrichment of the stopes.

* Loss.

† Reduced profit due to exceptional expenditure and decreased recovery.

‡ Decreased profit mainly due to lower grade recovered at central works.

§ Owing to large increase in tonnage, recovery of the gold has been adversely affected. Improvement in grade later on in the month should become apparent in next month's figures.

IVANHOE.
